ELECTRIC POWER STATISTICS

FEBRUARY 1967

PROPERTY OF THE
LIBRARY

Table 1 of this report contains preliminary statistics on energy generation, imports, exports and secondary for the month of February 1967. These preliminary statistics indicate that net generation increased 9.0 per cent to 13,757,125 thousand kwh. in February 1967 from 12,612,938^r thousand kwh. generated one year ago.

Imports increased to 286,597 thousand kwh. from 213,019 thousand kwh. and exports increased to 338,015 thousand kwh. from 278,318 thousand kwh. in February 1966.

Table 2 shows detailed data concerning the amount of energy made available and the disposition of this energy for the month of December 1966. These figures include a breakdown of sales by rate categories for large utilities and industries while distribution by smaller utilities and industries is included in "distribution by non-respondents" (item 31). Distribution by non-respondents is the energy which is delivered by companies which report in this survey to companies which do not report. Consumption of own generation by industrial establishments is included in "used in own plant" (items 20 and 21). Comparable December 1965 data is shown for all categories where available.

Tables 5, 6 and 7 give final data for the months January to December 1966 and preliminary data for other months. In Table 5, secondary energy includes both that used in own plant and that sold to ultimate customers. In December of the 494,598^r thousand kwh. of secondary energy, 230,581 thousand kwh. was used in own plant, while 264,017 thousand kwh. was sold to ultimate customers.

Total generation for the twelve-month period ending February 28, 1967 amounted to 159,830,521 thousand kwh. compared to 158,686,334^r thousand kwh. for the period ending in January.

Monthly electric power statistics are designed to provide current information on the production and consumption of electric energy in Canada. In order to expedite the collection and compilation of returns, the series is confined to firms which generate a minimum of 10 million kwh. per annum and to large distributors of electric energy. These firms accounted for 99.5 per cent of total production in 1964.

In the electric power series, net generation is defined as total generation less the amount used in station service.

(1) Many utilities cannot distinguish between domestic and farm, as they do not keep separate records.

(2) Includes sales to industrial establishments with generating facilities.

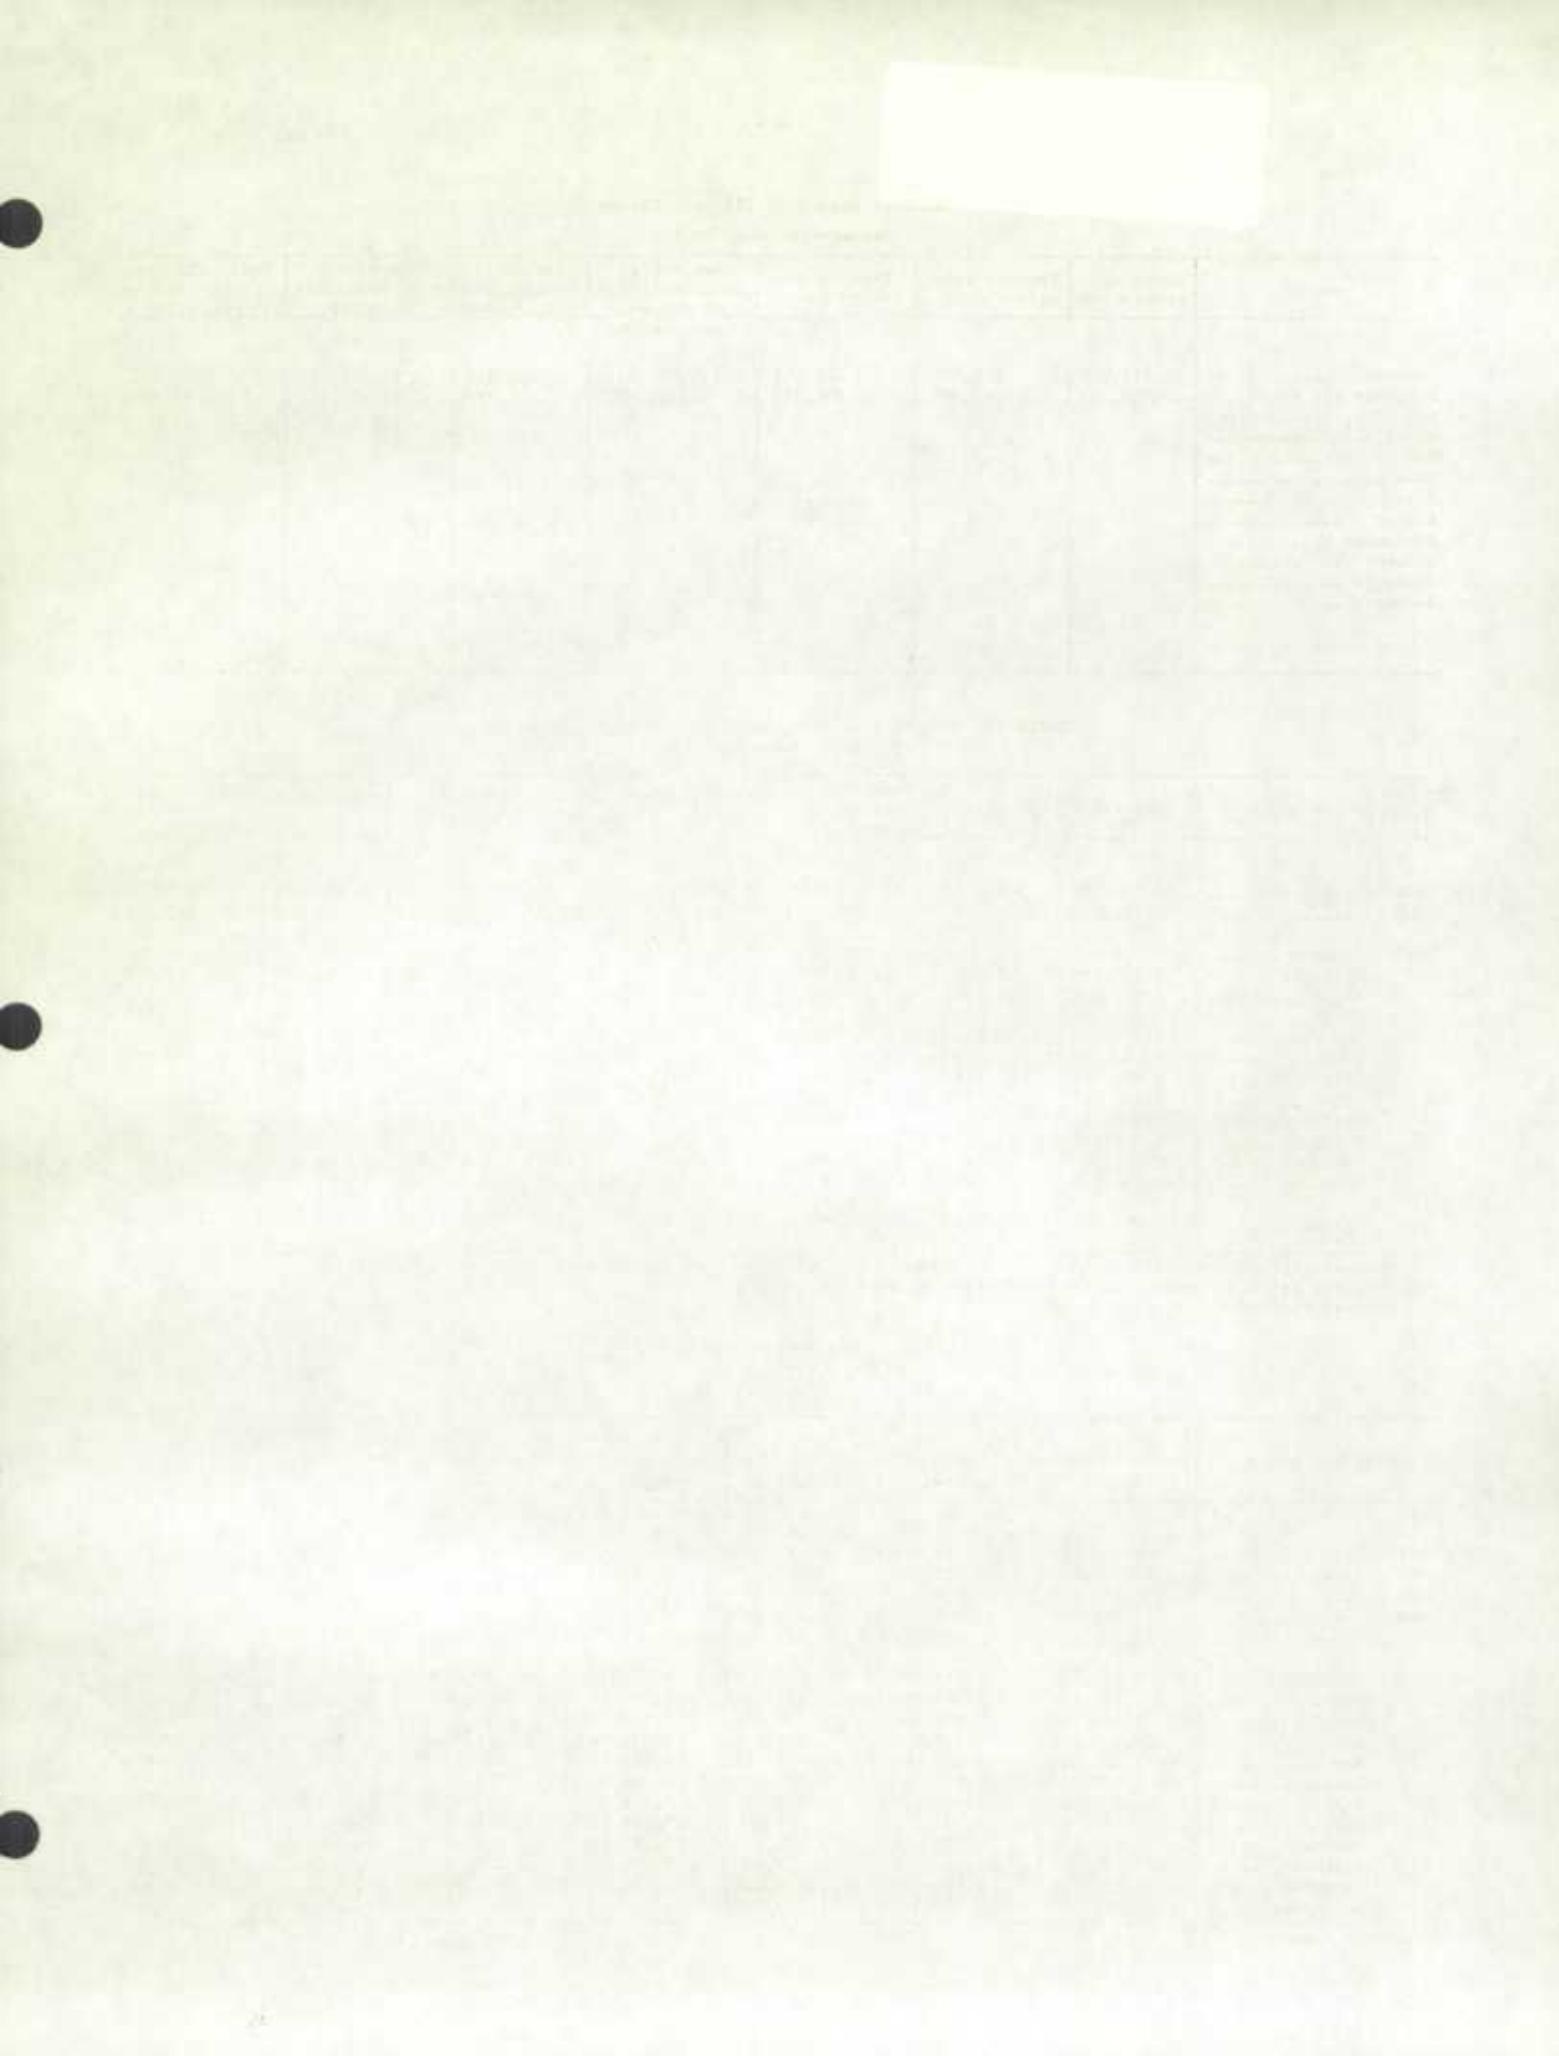

^r Revised figures.
