JUN 26 1967

ELECTRIC POWER STATISTICS

APRIL 1967

PROPERTY OF THE  
LIBRARY

Table 1 of this report contains preliminary statistics on energy generation, imports, exports and secondary for the month of April 1967. These preliminary statistics indicate that net generation increased 6.2 per cent to 13,357,433 thousand kwh. in April 1967 from 12,572,342<sup>r</sup> thousand kwh. generated one year ago.

Imports increased to 343,842 thousand kwh. from 176,750 thousand kwh. and exports decreased to 300,951 thousand kwh. from 309,433 thousand kwh. in April 1966.

Table 2 shows detailed data concerning the amount of energy made available and the disposition of this energy for the month of February 1967. These figures include a breakdown of sales by rate categories for large utilities and industries while distribution by smaller utilities and industries is included in "distribution by non-respondents" (item 31). Distribution by non-respondents is the energy which is delivered by companies which report in this survey to companies which do not report. Consumption of own generation by industrial establishment is included in "used in own plant" (items 20 and 21).

Tables 5, 6 and 7 give final data for the month of January and February 1967 and preliminary data for other months. In Table 5 secondary energy includes both that used in own plant and that sold to ultimate customers. In February, of the 262,568<sup>r</sup> thousand kwh. of secondary energy 154,884 thousand kwh. was used in own plant, while 107,684 thousand kwh. was sold to ultimate customers.

Total generation for the twelve month period ending April 30, 1967 amounted to 161,590,769 thousand kwh. compared to 160,805,678<sup>r</sup> thousand kwh. for the period ending in March.

Monthly electric power statistics are designed to provide current information on the production and consumption of electric energy in Canada. In order to expedite the collection and compilation of returns, the series is confined to firms which generate a minimum of 10 million kwh. per annum and to large distributors of electric energy. These firms accounted for 99.2 per cent of total production in 1965.

In the electric power series, net generation is defined as total generation less the amount used in station service.

<sup>r</sup> Revised figures.
