ELECTRIC POWER STATISTICS

JUNE 1967

Table 1 of this report contains preliminary statistics on energy generation, imports, exports and secondary for the month of June 1967. These preliminary statistics indicate that net generation increased 3.6 per cent to 12,703,675 thousand kwh. in June 1967 from 12,261,412 thousand kwh. generated one year ago.

Imports increased to 328,583 thousand kwh. from 223,435 thousand kwh. and exports decreased to 341,374 thousand kwh. from 349,640 thousand kwh. in June 1966.

Table 2 shows detailed data concerning the amount of energy made available and the disposition of this energy for the month of April 1967. These figures include a breakdown of sales by rate categories for large utilities and industries while distribution by smaller utilities and industries is included in "distribution by non-respondents" (item 31). Distribution by non-respondents is the energy which is delivered by companies which report in this survey to companies which do not report. Consumption of own generation by industrial establishments is included in "used in own plant" (items 20 and 21).

Tables 5, 6 and 7 give final data for the months January to April 1967 and preliminary data for other months. In Table 5 secondary energy includes both that used in own plant and that sold to ultimate customers. In April, of the 169,915^r thousand kwh. of secondary energy 106,049 thousand kwh. was used in own plant, while 63,866 thousand kwh. was sold to ultimate customers.

Total generation for the twelve month period ending June 30, 1967 amounted to 162,660,867 thousand kwh. compared to 162,218,604^r thousand kwh. for the period ending in May.

Monthly electric power statistics are designed to provide current information on the production and consumption of electric energy in Canada. In order to expedite the collection and compilation of returns, the series is confined to firms which generate a minimum of 10 million kwh. per annum and to large distributors of electric energy. These firms accounted for 99.2 per cent of total production in 1965.

In the electric power series, net generation is defined as total generation less the amount used in station service.
