

# Quarterly report on energy supply-demand in Canada

1980-II

# Bulletin trimestriel - disponibilité et écoulement d'énergie au Canada

1980-II

## Note

This and other government publications may be purchased from local authorized agents and other community bookstores or by mail order.

Mail orders should be sent to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7, or to Publishing Centre, Supply and Services Canada, Ottawa, K1A 0S9.

Inquiries about this publication should be addressed to:

Energy and Minerals Section,  
Manufacturing and Primary Industries  
Division,

Statistics Canada, Ottawa, K1A 0T6 (telephone: 996-3139) or to a local Advisory Services office:

|                    |            |
|--------------------|------------|
| St. John's (Nfld.) | (737-4073) |
| Halifax            | (426-5331) |
| Montréal           | (283-5725) |
| Ottawa             | (992-4734) |
| Toronto            | (966-6586) |
| Winnipeg           | (949-4020) |
| Regina             | (359-5405) |
| Edmonton           | (420-3027) |
| Vancouver          | (666-3695) |

Toll-free access to the regional statistical information service is provided in Nova Scotia, New Brunswick, and Prince Edward Island by telephoning 1-800-565-7192. Throughout Saskatchewan, the Regina office can be reached by dialing 1(112)800-667-3524, and throughout Alberta, the Edmonton office can be reached by dialing 1-800-222-6400.

## Nota

On peut se procurer cette publication, ainsi que toutes les publications du gouvernement du Canada, auprès des agents autorisés locaux, dans les librairies ordinaires ou par la poste.

Les commandes par la poste devront parvenir à Ventes et services de publications, Statistique Canada, Ottawa, K1A 0V7, ou à Imprimerie et édition, Approvisionnement et Services Canada, Ottawa, K1A 0S9.

Toutes demandes de renseignements sur la présente publication doivent être adressées à:

Section de l'énergie et des minéraux,  
Division des industries manufacturières et  
primaires,

Statistique Canada, Ottawa K1A 0T6 (téléphone 996-3139) ou à un bureau local des Services consultatifs situé aux endroits suivants:

|                    |            |
|--------------------|------------|
| St. John's (T.-N.) | (737-4073) |
| Halifax            | (426-5331) |
| Montréal           | (283-5725) |
| Ottawa             | (992-4734) |
| Toronto            | (966-6586) |
| Winnipeg           | (949-4020) |
| Regina             | (359-5405) |
| Edmonton           | (420-3027) |
| Vancouver          | (666-3695) |

On peut obtenir une communication gratuite avec le service régional d'information statistique de la Nouvelle-Écosse, du Nouveau-Brunswick et de l'Île-du-Prince-Édouard en composant 1-800-565-7192. En Saskatchewan, on peut communiquer avec le bureau régional de Regina en composant 1(112)800-667-3524, et en Alberta, avec le bureau d'Edmonton au numéro 1-800-222-6400.

## Symbols

The following standard symbols are used in this Statistics Canada publication:

- . . figures not available.
- . . . figures not appropriate or not applicable.
  - nil or zero.
- - amount too small to be expressed.
- P preliminary figures.
- † revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- ‡ disposition of this secondary product is shown under the primary form thereof.

## Signes conventionnels

Les signes suivants sont employés dans cette publication de Statistique Canada:

- . . nombres indisponibles.
- . . . n'ayant pas lieu de figurer.
  - néant ou zéro.
- - nombres infimes.
- P nombres provisoires.
- † nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.
- ‡ la disposition de ce produit secondaire est comprise dans les données relatives à la forme primaire de ce même produit.

## INTRODUCTION

### Acknowledgements

To the Energy Policy Sector of the federal Department of Energy, Mines and Resources for help in the development of computer programmes upon which the data output is based.

To the Canadian Pulp and Paper Association for data relating to self-generated energy forms within its industry.

To the National Energy Board for data on liquefied petroleum gases.

The first two editions of this Catalogue 57-003 were special editions covering the years 1976 and 1977 respectively. These editions did not provide detailed data on energy disposition, but showed only information on the supply of energy - production, trade, inventory change, etc.

Commencing with the first quarter 1978 issue, not only are data on the supply of energy shown, but also a detailed breakout of the disposition of energy. This latter information is derived from quarterly surveys which are structured towards obtaining data from the energy supply companies in a standardized format, i.e., in a manner which will allow inter-energy comparisons. This represents a significant advance over previous surveys, which were structured to accommodate the accounting systems employed by reporting companies. Since this publication represents a refinement over previous publications, it replaces the annual Catalogue 57-207, the last edition of which relates to 1977. However, a word of caution is warranted, in that some responding companies are not able to distinguish between certain of the disposition categories - for example between "public administration" and "other commercial/institutional". Furthermore, "producer consumption" for electric power includes, not only "utility use", "transmission losses", etc., but also the category "unaccounted for" which is subject to variation because of cyclical billing.

The universes for all surveys forming the basis of this publication are characterized by very few but very large respondents - Hydro-Québec, Imperial Oil Ltd., etc. Consequently, in general no "sample" surveys are employed; rather surveys of the total universe, with complete response rates, form the basis of

## INTRODUCTION

### Remerciements

Au Secteur de l'énergie du ministère fédéral de l'Énergie, des Mines et des Ressources pour sa contribution à l'élaboration des programmes informatiques ayant permis la production des données.

À l'Association canadienne des producteurs de pâtes et papiers pour des données sur les formes d'énergie naturelles (non fabriquées) utilisées au sein de cette industrie.

À l'Office national de l'énergie pour ses données sur le gaz de pétrole liquéfié.

Les deux premiers nos 57-003 au catalogue, étaient des numéros spéciales pour les années 1976 et 1977 respectivement. Ceux-ci ne présentaient aucune donnée détaillée sur l'écoulement énergétique mais plutôt des données visant la disponibilité - production, commerce, variation des stocks, etc.

À la parution des données pour le premier trimestre de 1978 on offre des données sur les ressources énergétiques en plus de ventiler en détail l'utilisation d'énergie. Ces derniers renseignements sont tirés d'enquêtes trimestrielles réalisées récemment auprès d'entreprises de production d'énergie afin d'obtenir des données sous forme normalisée, c.-à-d., permettant la comparaison entre les formes d'énergie. C'est là un net avantage sur les enquêtes précédentes qui étaient conçues en fonction des systèmes de comptabilité employés par les entreprises déclarantes. Puisque cette publication constitue une amélioration des publications antérieures, elle remplace la livraison annuelle du no 57-207 au catalogue dont le dernier numéro portait sur 1977. Toutefois, un brin d'avertissement s'impose - certaines compagnies répondantes ne peuvent distinguer entre certaines catégories - par exemple les catégories "administration publique" et "commerces et institutions". Par ailleurs, "autoconsommation des producteurs" dans le secteur de l'énergie électrique comprend non seulement "l'utilisation des services" ainsi que "les pertes du transport" de la-dite énergie mais aussi la catégorie des quantités "non comptabilisées" laquelle est sujette à varier dû à une rectification périodique des comptes.

L'univers de toutes les enquêtes de base pour cette publication se caractérise par des enquêtes peu nombreux mais très importants - Hydro-Québec, Imperial Oil Ltd., etc. Aussi, plutôt que de procéder par sondage, on recense généralement l'univers total et les données complètes ainsi recueillies forment l'essentiel de cette publication.

this present publication. Those few areas where estimates have played a role are indicated in the section on Data Sources following.

Note should be made of the fact that data are published in metric units only.

kilo =  $10^3$   
 mega =  $10^6$   
 giga =  $10^9$   
 tera =  $10^{12}$   
 peta =  $10^{15}$   
 1 megalitre =  $10^3 \text{ m}^3$  (or 1 000 cubic metres)  
 1 gigalitre =  $10^6 \text{ m}^3$  (or 1 000 000 cubic metres)  
 1 B.t.u. =  $1.054\ 615 \times 10^3$  joules  
 1 barrel = .15 891 cubic metres  
 1 cubic foot = .028 327 84 cubic metres  
 1 ton = .907 184 7 metric tonne.

Energy conversion factors utilized are as follows:

Les quelques secteurs où l'on procède à des estimations sont identifiés à la section suivante sur les sources des données.

À noter que les données sont publiées en unités métriques seulement.

kilo =  $10^3$   
 mega =  $10^6$   
 giga =  $10^9$   
 tera =  $10^{12}$   
 peta =  $10^{15}$   
 1 mégalitre =  $10^3 \text{ m}^3$  (ou 1 000 mètres cubes)  
 1 gigalitre =  $10^6 \text{ m}^3$  (ou 1 000 000 mètres cubes)  
 1 B.t.u. =  $1.054\ 615 \times 10^3$  joules  
 1 baril = .158 91 mètre cube  
 1 pied cube = .028 327 84 mètre cube  
 1 tonne impériale = .907 184 7 tonne métrique.

Les facteurs de conversion en terajoules sont les suivants:

| Fuel type   | Natural unit                      | Conversion factor         |
|---|-----------------------------------|---------------------------|
| Combustible   | Unité naturelle                   | Coefficient de conversion |
| <b>Coal - Charbon:</b>                                  |                                   | <b>terajoules</b>         |
| Anthracite  | kilotonnes                        | 29.53                     |
| Imported bituminous - Bitumineux importé                | "                                 | 29.99                     |
| Canadian Bituminous - Bitumineux canadien               | "                                 | 29.30                     |
| Sub-bituminous - Sousbitumineux                         | "                                 | 19.76                     |
| Lignite   | "                                 | 15.35                     |
| Coke  | "                                 | 28.83                     |
| Coke oven gas - Gaz de four à coke                      | gigalitres                        | 18.61                     |
| Propane   | megalitres                        | 25.53                     |
| Butane  | "                                 | 28.62                     |
| Ethane  | "                                 | 18.36                     |
| Crude oil - Pétrole brut                                | "                                 | 38.51                     |
| Still gas - Gas de distillation                         | "                                 | 41.73                     |
| Motor gasoline - Essence pour moteurs                   | "                                 | 34.66                     |
| Kerosene - Kérosène                                     | "                                 | 37.68                     |
| Diesel - Huiles diesels                                 | "                                 | 38.68                     |
| Light fuel oil - Mazouts légers                         | "                                 | 38.68                     |
| Heavy fuel oil - Mazouts lourds                         | "                                 | 41.73                     |
| Petroleum coke - Coke de pétrole                        | "                                 | 42.38                     |
| Aviation gasoline - Essence d'aviation                  | "                                 | 33.52                     |
| Aviation turbo fuel - Carburéacteurs pour turbine à gaz | "                                 | 35.93                     |
| Natural gas - Gaz naturel                               | gigalitres                        | 37.23                     |
| Electricity - Énergie électrique                        | gigawatt hours<br>gigawatt heures | 3.60                      |
| Steam - Vapeur  | kilotonnes                        | 2.75                      |

(1) Still gas is expressed in barrels of heavy fuel oil equivalent.

(1) Le gaz de distillation s'exprime en équivalent de barils de mazout lourd.

Since this quarterly publication gives additional detail on non-energy products at petroleum refineries, it was necessary to employ the following equivalents for the products listed:

Puisque cette publication trimestrielle donne des renseignements supplémentaires sur des produits non énergétiques fabriqués aux raffineries de pétrole, il a fallu utiliser les équivalents suivants pour chacun de ces produits:

| Fuel type  | Natural unit    | Conversion factor         |
|--|-----------------|---------------------------|
| Combustible  | Unité naturelle | Coefficient de conversion |
|  |                 | terajoules                |
| Petrochemical feedstock - Alimentation pétrochimique           | megalitres      | 35.17                     |
| Naptha specialities - Produits spéciaux/base-napthe            | "               | 35.17                     |
| Asphalt - Asphalte   | "               | 44.46                     |
| Lubricating oils and greases - Huiles et graisses lubrifiantes | "               | 39.16                     |
| Other products - Autres produits                               | "               | 39.82                     |

#### NOTES ON INDIVIDUAL TABLES

##### Table S1. Energy Summary Table

This table is intended to allow an analysis of energy trends at certain points of measurement - namely:

1. production, from primary sources
2. gross availability, availability of each energy form (excluding crude oil) less;
  - a) production of coke
  - b) production of coke oven gas
  - c) production of thermal electricity
  - d) LPG's used for the production of refinery products,
3. net domestic consumption (net supply of primary and secondary sources),
4. producer consumption (less any crude oil consumed by producers),
5. non-energy use,
6. energy use,
7. total mining,
8. total manufacturing,
9. total industry,
10. total transportation (see explanation under Table S3 page viii.)
11. residential and farm,
12. government and other commercial.

Further, to allow comparison with international data series where electric energy from hydro and nuclear sources is shown in the equivalent of thermal electricity, nuclear and hydro energy has been converted at 10.5 megajoules per kilowatt hour for Categories 1 and 2 above.

#### NOTES SUR LES TABLEAUX

##### Tableau S1. Tableau sommaire de l'énergie

Dans ce tableau, il est possible d'analyser les tendances énergétiques à partir de certains points de repère:

1. production, sources primaires
2. disponibilité brute, disponibilité de chaque forme d'énergie (sauf pétrole brut) moins;
  - a) la production de coke
  - b) la production de gaz de fours à coke
  - c) la production d'énergie électrique (thermique)
  - d) GPL utilisés pour la production de produits pétroliers raffinés,
3. consommation intérieure nette (disponibilité nette primaire et secondaire),
4. autoconsommation (moins la quantité de pétrole brut utilisé par les producteurs)
5. utilisation non énergétique,
6. utilisation énergétique
7. total, mines,
8. total, fabrication,
9. total, industrie,
10. total, transports (voir l'explication au tableau S3 page viii.)
11. secteurs résidentiel et agricole,
12. secteur public et autres secteurs commerciaux.

En outre, à l'instar des séries de données internationales et pour permettre la comparaison avec ces dernières, on a exprimé l'hydro-électricité et l'électricité nucléaire en équivalent d'électricité thermique (à raison de 10.5 mégajoules par kilowatt-heure) pour les catégories 1 et 2 ci-dessus.

As an aid to analysis, degree days below 18.0° Celsius are shown. The provincial and national figures have been developed by utilizing recordings at certain selected stations considered to be representative of the geographic area concerned.

Table S2. Components of Major Energy Totals

This table also is intended to allow an analysis of trends in energy, but in the five basic energy forms. The method of compiling the data is the same as that employed in table S1.

Table S3. End Uses of Major Fuel Types

This table is intended to allow an analysis of the five basic energy forms as used in table S1 and the disposition of these energy forms to the various consuming sectors. In the transportation sector, only the use of fuel by basic transportation area (defined as railways, airlines, marine, pipelines, road and urban transit, and retail pump sales) is included. Excluded is that fuel which may have been used by other sectors (eg. agriculture) for transportation but which is included within the quantities reported for such sectors. An exception is aviation gasoline and turbo fuel all of which are included in transportation.

Note that solid wood wastes and spent pulping liquor, shown as a Note below Table G, are not included in the Summary Tables S1, S2 and S3. The amounts of these fuels used in electrical generation in the Pulp and Paper Industry, as shown in Table G, are also not included in summary tables.

Table A. Primary and Secondary Energy Supply

This table summarizes data on primary and secondary energy forms. The total for refined products includes those non-energy products detailed in Table C. However, total refined products will not equate with the total of all refined products of Catalogue 45-004, Refined Petroleum Products, from which the data are derived, since the latter includes an item "refinery losses", excluded from this publication. Further, stock changes of heavy fuel oil include changes at certain electric utility stations.

Energy products with both primary and secondary sources (electricity and liquefied petroleum gases) have all their disposition accounted for under the primary form of each.

Pour faciliter l'analyse, on indique les jours-degrés au-dessous de 18.0° Celsius. Les chiffres pour le Canada et les provinces ont été calculés à partir des lectures prises à certaines stations considérées comme représentatives de la région géographique en question.

Tableau S2. Répartition de l'énergie

Ce tableau entend également permettre l'analyse des tendances d'énergie mais pour les cinq principales formes d'énergie. La méthode utilisée pour la compilation des chiffres est celle indiquée dans le tableau S1.

Tableau S3. Utilisation finale de chaque combustible principal

Ce tableau entend permettre l'analyse de cinq principales formes d'énergie telles qu'utilisées au tableau S1 et l'écoulement de celles-ci aux divers secteurs de consommation. Dans le secteur du transport, on a inclus seulement les combustibles utilisés par le secteur défini comme chemins de fer, lignes aériennes, maritimes, pipelines, transport commercial et en commun, et ventes au détail (pompes). Ainsi on a exclu le combustible qui a peut-être été utilisé aux fins de transport dans d'autres secteurs (exemple l'agriculture), mais qui a été inclus avec les quantités indiquées pour de tels secteurs. Cependant, toutes quantités d'essence d'aviation et de carburateur sont comprises dans le secteur du transport.

À noter que les déchets solides de bois et la lessive de pâte épuisée indiqués comme nota au bas du tableau G ne sont pas compris aux tableaux sommaires S1, S2 et S3. Les quantités de ces combustibles utilisées dans la production d'énergie électrique dans l'industrie des pâtes et papiers telles qu'indiquées au tableau G, ne sont pas comprises non plus dans les tableaux sommaires.

Tableau A. Disponibilité de l'énergie primaire et secondaire

Ce tableau présente des données sommaires sur les formes d'énergie primaires et secondaires. Les produits non énergétiques du tableau C sont compris dans le total des produits raffinés. Toutefois, ce chiffre ne correspondra pas au total des produits raffinés publié dans la publication Produits pétroliers raffinés (n° 45-004 au catalogue) d'où sont tirées les données, du fait que ce dernier comprend le poste "pertes des raffineries" qui ne figure pas ici. De plus, les variations des stocks de mazouts lourds comprennent les changements à certaines centrales électriques.

Les produits énergétiques consommés provenant de sources primaires et secondaires (électricité et gaz de pétrole liquéfiés) se retrouvent entièrement sous la rubrique "primaire" de chacun.

Since propane and butane gas data are derived from two sources (the National Energy Board and Catalogue 45-004), certain estimations have been made to reconcile discrepancies. Ethane data are derived from pipeline data and from information made available by the Alberta government.

Tables C, E, F and G are intended to show in detail the data summarized in Table A.

#### DATA SOURCES

The data sources for this publication are mainly monthly surveys of the major energy suppliers. Certain salient points are worthy of note:

##### Natural Gas

A change in concept has resulted in a switch from raw gas to marketable gas in this quarterly publication, affecting the lines "production", "producer consumption" and "producer losses and adjustments". The change has two advantages - firstly in the area of timeliness and secondly in that the statistical treatment of natural gas now accords with that of electricity. Estimates for the non-energy use of natural gas have been derived from monthly statistics on the production of anhydrous ammonia, methanol, carbon black and some miscellaneous chemicals. The estimates take into account that only certain companies producing the products listed above use natural gas as a feed stock. Gas used as fuel associated with feedstock gas is shown under "Industrial Chemicals".

Non-energy sales of natural gas are shown only for Ontario and Alberta. Confidentiality constraints prevent other provincial figures being shown. As a result Canada totals are a sum of Ontario and Alberta figures.

##### Coke Oven Gas

Figures for the production of coke oven gas are estimated from known coal coke production data. The thermal value of coal charged to coke ovens less the thermal value of the resultant coke production must equal the coke oven gas production, together with an allowance for heating and losses.

Étant donné que les données sur les gaz propane et butane proviennent de deux sources (l'Office national de l'énergie et la publication n° 45-004 au catalogue), on a dû procéder à certaines estimations pour rectifier les divergences. Les données sur l'éthane proviennent de renseignements rapportés par les pipelines et de renseignements publiés par le gouvernement de l'Alberta.

Les tableaux C, E, F et G présentent en détail les données sommaires du tableau A.

#### SOURCES DE DONNÉES

Les sources des données de la présente publication sont essentiellement des enquêtes mensuelles auprès des principaux producteurs d'énergie. Certains points saillants méritent d'être soulignés:

##### Gaz naturel

En raison d'un changement de concept, les chiffres de cette publication trimestrielle portent dorénavant sur le gaz commercialisable plutôt que sur le gaz brut, ce qui modifie les postes "production", "consommation des producteurs" et "pertes et ajustements des producteurs". Le nouveau concept présente deux avantages: d'abord, la présentation de données plus actuelles et ensuite, un traitement statistique uniforme pour le gaz naturel et l'électricité. On a estimé l'utilisation non énergétique du gaz naturel à partir de statistiques mensuelles sur la production d'ammoniaque anhydre, de méthanol, de noir de carbone et de divers produits chimiques. Ces estimations tiennent compte du fait que seules certaines des entreprises fabriquant les produits énumérés ci-dessus utilisent le gaz naturel comme charge d'alimentation. Le gaz utilisé comme combustible avec un gaz d'alimentation figure sous la rubrique "produits chimiques industriels".

Les ventes non énergétiques de gaz naturel ne sont rapportées que pour les provinces de l'Ontario et de l'Alberta. Les règles de confidentialité ne permettent aucune divulgation des chiffres pour les autres provinces. Cela dit, le total pour le Canada est donc la somme des chiffres de l'Ontario et de l'Alberta.

##### Gaz de fours à coke

Les chiffres sur la production de gaz de fours à coke sont estimés à partir des données connues sur la production de coke de houille. La valeur thermique de la houille chargée dans les fours à coke moins la valeur thermique du coke ainsi produit doit égaler la production de gaz de fours à coke, rectifiée pour tenir compte de la chaleur et des pertes.

## Steam

Steam sold for purposes other than the generation of electricity is now included in the balance sheets. The primary production shown is that from nuclear sources with secondary production being shown as an item under transformed from other fuels (line 13). This method of treating the transformation of a primary form into a secondary form differs from that used for all other secondary forms. Secondary steam production appears as a positive number on line 13 under column "steam" of tables A and B, while the production of other secondary energy forms appears as "production" (i.e. line 1) under the relevant columns. Additional sources of primary steam i.e., biomass and geothermal, will be included as they become significant.

## Fuels Used in Thermal Electric Generation

### Utilities

For the year 1976, coal used in thermal generation stations was reported in the "Coal Users Survey", while generation from such stations was known from annual surveys. Reasonably accurate estimates of generation from coal by quarter were derived. Similarly, gas used by electric utilities was available from the gas utilities monthly survey (unpublished data), while electric generation from gas was known on an annual basis. Again, using these two factors, reasonable quarterly estimates of electricity generation from gas were obtained. All other thermal generation was attributed to oil products.

In 1977 and subsequent years, the usage of oil, gas and coal for thermal generation obtained from the utilities is used for estimates of generation by quarter and by fuel type. Estimates for non-reporting companies are also now included.

### Industrial Generation

In 1977, estimates of fuel used were based on annual survey results, with fuels allocated quarterly in accordance to the quarterly pattern of net generation by company. Within these estimates, conventional steam generation by industry is assumed to have an efficiency of 65%, or a heat rate of 5.537

## Vapeur

La vapeur vendue pour les fins autres que la production d'énergie électrique est maintenant incluse dans les bilans. On a déterminé que la vapeur produite par des sources nucléaires doit être considérée comme "production primaire", bien que les autres formes de vapeur sont indiquées sous la rubrique "transferts inter-produits" (ligne 13). Cette méthode de traiter la transformation d'une énergie primaire en une forme d'énergie secondaire diffère de celle utilisée pour toutes les autres formes d'énergie secondaire. La production de vapeur secondaire apparaît comme une valeur positive à la ligne 13 sous la colonne "Vapeur" pour les tableaux A et B tandis que la production d'autres formes d'énergie secondaire apparaît comme "production" (c.a.d. ligne 1) sous les colonnes appropriées. Les sources additionnelles de vapeur primaire (exemple biomasse et géothermique) seront incluses quand elles deviendront suffisamment importantes.

## Combustibles utilisés dans la production d'électricité thermique

### Services publics

Pour 1976, les centrales thermiques ont déclaré leur consommation de charbon dans le cadre de l'enquête sur le charbon et leur production, en réponse à des enquêtes annuelles. À partir de ces données, on a pu dériver des estimations satisfaisantes de la production d'électricité par trimestre. De même, les déclarations mensuelles des services de gaz (données inédites) ont indiqué la consommation de gaz des services de distribution d'électricité alors que les données annuelles ont permis de connaître la production d'électricité des centrales à gaz. Ici encore, à partir de ces deux facteurs, on a pu obtenir des estimations trimestrielles satisfaisantes de la production d'électricité par le gaz. Le reste de la production a été attribué aux produits pétroliers.

À partir de 1977, les données sur l'utilisation du pétrole, du gaz et du charbon obtenues auprès des services publics servent à estimer la production par trimestre et par type de combustible. Les estimations pour les compagnies non déclarantes sont maintenant comprises au même titre.

### Production industrielle

Pour 1977, les estimations sur l'utilisation du combustible sont fondées sur les résultats d'enquêtes annuelles, l'utilisation étant répartie chaque trimestre en fonction de la tendance trimestrielle de la production nette de chaque entreprise. À même ces estimations, le rendement de la production industrielle de vapeur est fixé à 65 %

megajoules/kW.h. When figures supplied by industry approximated these values, no adjustments were made.

This approach differs from that used prior to 1976 in Catalogue 57-207, where the industrial use of energy for conventional generation was assumed to include the energy required to produce the initial steam and was not restricted to the energy required to super heat such steam for use in the turbine/generator. Such industrial co-generation is normal where steam is produced primarily for process heating applications and some electrical generation is performed as a by-product operation. (Utilities, however, are viewed as being in the business of producing electricity and all heat losses are ascribed to electrical generation yielding maximum possible efficiencies of about 35%-40%.) For gas turbine and internal combustion generation, reported industry figures were left unadjusted.

For years subsequent to 1977, estimates of fuels used are based on company monthly net generation data. Efficiencies and fuel types are those obtained from the previous year's annual report from the company with efficiencies adjusted as necessary. Allowances have been made in these estimates for those companies which do not report monthly to Statistics Canada.

#### Crude Oil

For reasons of confidentiality, imports of crude oil have been excluded from the tables relating to the individual Atlantic provinces. Similarly, all subsequent data points for "crude oil", for "total primary sources" and for "total primary and secondary sources" do not reflect such imports. However, Table 2, the Atlantic provinces in total, does show imports of crude oil into the region as a whole, and as a consequence, the data contained therein are not the sum of the individual Atlantic provinces.

ou à un taux calorifique de 5.537 megajoule/kW.h. Lorsque les chiffres fournis par l'industrie se rapprochent de ces estimations, on ne fait aucun ajustement.

Cette méthode diffère de celle qui avait été utilisée avant 1976 dans la publication n° 57-207 au catalogue, qui supposait que l'utilisation industrielle de l'énergie pour la production courante comprenait l'énergie nécessaire pour produire la vapeur initiale en plus de celle requise pour surchauffer cette vapeur aux fins des turbines/génératrices. Ce type de coproduction industrielle est normal lorsque la vapeur sert à produire essentiellement de la chaleur industrielle, l'électricité n'étant qu'un sous-produit. (Toutefois, les services publics étant considérés avant tout comme des producteurs d'électricité, toutes les pertes de chaleur sont attribuées à la production électrique pour un rendement maximum possible d'environ 35 %-40 %.) Pour la production des turbines à gaz et à combustion interne, aucun ajustement n'a été apporté aux chiffres de l'industrie.

Depuis 1977, les estimations sur l'utilisation du combustible sont fondées sur la production mensuelle nette, par entreprise. Les rendements et les types du combustible sont ceux établis par l'entreprise dans les questionnaires couvrant l'année précédente, avec certains ajustements pour les rendements, là où ils s'avéraient nécessaires, on a tenu compte dans les estimations des entreprises qui ne font pas rapport mensuellement à Statistique Canada.

#### Pétrole brut

Pour des raisons de confidentialité, les importations de pétrole brut ne figurent pas dans les différents tableaux sur chacune des provinces de l'Atlantique. De même, toutes les données simples subséquentes pour le "pétrole brut", le "total des sources primaires" et le "total, primaire et secondaire" ne tiennent pas compte de ces importations. Toutefois, les données du tableau 2 sur l'ensemble des provinces de l'Atlantique incorporent les importations de pétrole brut dans l'ensemble de la région et ne sont donc pas simplement la somme des données présentées pour les différentes provinces de l'Atlantique.

Statistical Tables

Tableaux statistiques

TABLE S1. ENERGY SUMMARY TABLE - 1980 QUARTER 2
