dealing with  
**ELECTRIC POWER**

Catalogue number	Title	Price
<b>Annual</b>		
57-201	Electric and Gas Meter Registrations. Approx. 200 pp. Meter registrations by province, county or census division, company and place served, by type of service .....	\$2.00
57-202	Electric Power Statistics. Approx. 48 pp. Summary and detailed analyses of generation and use of electric power in Canada, power plant equipment, customers, employees, salaries and wages and financial statistics .....	.75
57-203	Electricity Bills for Domestic, Commercial and Small Power Service. Approx. 15 pp. Includes an annual index of electricity bills for domestic service and bills for light and power in cities and representative municipalities .....	.50
57-204	Electric Power Survey of Capability and Load. Approx. 32 pp. Current and projected data of capability and load of major producers of electric energy in Canada .....	.50
<b>Monthly</b>		
57-001	Electric Power Statistics. Approx. 4 pp. Production by utilities and industrial establishments, imports and exports, power made available for use in Canada, amount used in electric boilers, by provinces .....	per copy, 10¢; per year 1.00
<b>Occasional</b>		
57-501	Inventory of Prime Mover and Generating Equipment. Approx. 96 pp. A list of the large generating plants in Canada by ownership, showing the location, year of installation, name-plate rating and other details of each large unit, as at December 31, 1958 .....	1.00

- ... figures not appropriate or not applicable.
- nil or zero.
- \* revised.

# ELECTRIC POWER STATISTICS

1959

Statistics presented in this report fall into two main categories: statistics based on the combined reports of electric utilities and industrial establishments, and statistics based on data received from utilities only. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy which they have either generated or purchased. They are referred to as the electric utility industry. Industrial establishments are defined, for the purpose of this report, as companies or individuals which generate electricity mainly for their own use. Statistics based on the combined reports of both utilities and industrial establishments include generating capacity, production and disposal of electric energy, revenue received from the sale of electricity, and customers. Statistics applicable only to the electric utility industry include pole line and circuit mileage, transformers, fuel consumption, employees, wages and salaries and other financial data.

The current series of electric power statistics dates back only to 1956. Earlier reports entitled "Central Electric Stations" were concerned solely with the electric utility industry and hence excluded statistics relating to power produced by industrial establishments for own use. Data relating to power sold by industrial establishments was, however, included.

In the revised series, all firms are classed as either utilities or industrial establishments and separate statistics are compiled for each group. Energy disposed of by industrial establishments is then combined with that disposed of by utilities in order to present statistics roughly comparable with those compiled for the electric utility industry in earlier years. One major difference is that many blocks of energy formerly classed as sales are now treated as produced for own use, since the transfer of energy was found to be between plants within the same organization.

In 1956, because of the difficulty of separating line losses of industrial producers into losses relating to sales and losses relating to energy produced for own use, total industrial losses were presented under "Disposal of Energy" in Table 5. Commencing with 1957, losses associated with energy generated for own use are shown as a separate item under "Energy Made Available", Table 4.

A comprehensive census of generating equipment conducted in December 1958 has resulted in refinements to the installed generating capacity series presented in this report. Where possible, revisions have been made in 1957 figures to make them consistent with those compiled for 1958.

Total installed generating capacity in Canada at the end of 1959 amounted to 21,108,920 kilowatts, 13.1 per cent more than the revised total of

18,669,418 kilowatts in 1958. Utilities accounted for 16,937,290 kilowatts compared with 14,868,574 kilowatts in 1958, while industry had a capacity of 4,171,630 kilowatts and 3,800,844 kilowatts in 1959 and 1958, respectively. Hydraulic installations accounted for 83.1 per cent of the total and thermal plants, 16.9 per cent.

Quebec had the largest generating capacity at 8,228,234 kilowatts or 39 per cent of the national total, followed by Ontario with 32 per cent and British Columbia with 13 per cent. The largest increase in generating capacity was in Quebec where the increase amounted to 1,170,270 kilowatts. Ontario increased its capacity by 828,826 kilowatts, British Columbia by 190,372, Saskatchewan by 143,306, Nova Scotia by 79,250 and Alberta by 30,552 kilowatts.

The largest thermal generating capacities were in Ontario with 31 per cent, Saskatchewan with 16 per cent, Alberta with 15 per cent, British Columbia with 11 per cent and Nova Scotia with 10 per cent.

The major increases in generating capacity in Quebec were: 3 units with a capacity of 445,500 kilowatts at Chute des Passes, the initial installation of 3 units with a total capacity of 363,000 kilowatts (ultimately 5 units) at Bersimis II, 275,000 kilowatts completing the Beauharnois project, and 81,000 kilowatts added to the St. Lawrence River Beaumont Development.

In Ontario the major projects were the addition of 513,000 kilowatts at the Robert H. Saunders generating plant at Cornwall, 45,500 kilowatts at Silver Falls hydro electric development and 41,225 at the Abitibi Canyon hydro electric project.

In British Columbia 124,000 kilowatts were added at the Bridge River hydro electric plant and 25,200 at the Ash River hydro electric development on Vancouver Island. One hundred thousand kilowatts were added at the Port Mann Gas Turbine plant near Greater Vancouver.

In Saskatchewan 66,000 kilowatts were added to the Queen Elizabeth Steam Turbine plant at Saskatoon and 66,000 kilowatts at the Boundary Dam thermal generating Station.

In Nova Scotia 45,000 kilowatts were added at the Halifax Steam Plant.

Net generation (total generation less energy used in station service) increased 7.3 per cent in 1959 to 104,613,564 thousand kilowatt hours from 97,484,289 thousand kilowatt hours one year earlier. Generation by electric utilities increased 9.3 per cent to 83,048,885 thousand kilowatt hours from 75,953,132 thousand but accounted for 79.4 per cent of total production compared with 77.9 per cent in 1958. Generation by industry went up to 21,564,679 thousand kilowatt hours from 21,531,157 thousand a

year earlier. The industry's share of net generation decreased to 20.6 per cent in 1959 from 22.1 per cent in 1958. Generation from hydraulic facilities amounted to 92.5 per cent while thermal was 7.5 per cent. Although Quebec had 39 per cent of the total generating capacity in Canada, it accounted for 43 per cent of the total generation, followed by Ontario with 32 per cent and British Columbia with 12 per cent.

The amount of electric energy made available for use in Canada increased 7.4 per cent or slightly more than the net generation increase. This was caused by an increase in imports to 512,002 thousand kilowatt hours and a rise in exports to 4,580,619 thousand kilowatt hours. As a result, net exports increased 239,166 thousand kilowatt hours.

Of the total reported available for use in Canada in 1959, some 19,660,152,000 kilowatt-hours, including 649,897,000 estimated as losses, represented generation by industrial establishments for own use. This compares with 20,048,733,000<sup>r</sup> kilowatt-hours in 1958 and reflects a decrease of 388,581,000 kilowatt-hours or 1.9 per cent.

Total sales of electricity to ultimate customers increased 10.0 per cent in 1959 to 71,888,110,000 kilowatt-hours from the 1958 total of 65,323,721,000. Power customers purchased 44,219,794,000 kilowatt-hours or 61.5 per cent of the total (61.6 per cent in 1958); domestic and farm customers, 19,007,111,000 or 26.4 per cent (26.5 in 1958); and commercial customers, 8,058,275,000 or 11.2 per cent (11.1). Street lighting accounted for the remaining 602,930,000 kilowatt-hours of electricity sold. In addition, some 8,991,491,000 kilowatt-hours of energy available for disposal were reported lost or unaccounted for. This compares with 8,282,384,000 kilowatt-hours in 1958.

A 4.3 per cent rise in ultimate customers brought the total to 5,018,725 from 4,809,634 in 1958. Domestic and farm customers increased 4.6 per cent to 4,381,564 from 4,188,946, while the number of commercial customers showed a moderate rise to 528,579 from 516,018. Power customers rose 3.7 per cent in 1959 to 103,507 from 99,818. The percentage of increase in ultimate customers was highest in The Yukon-Northwest Territories and lowest in New Brunswick.

Revenue received from sales to ultimate customers totalled \$755,772,000, up 9.3 per cent from the 1958 total of \$691,703,000. Domestic and farm customers produced revenues of \$305,662,000 versus \$278,531,000; commercial customers, \$141,518,000 versus \$131,844,000; power customers, \$293,787,000 versus \$268,121,000 and street lighting customers, \$14,805,000 versus \$13,207,000. Revenue obtained from export sales amounted to \$13,895,000 compared with \$13,379,000 in 1958.

There was no change in the average domestic and farm service revenue per kilowatt-hour, which remained at 1.61 cents. The heavier costs of thermal

generation, especially in Prince Edward Island and in The Yukon-Northwest Territories are reflected in the higher revenues per kilowatt-hour received in those provinces. Manitoba earned the lowest revenue per kilowatt-hour sold.

The average annual bill for domestic and farm customers rose 4.9 per cent in 1959 to \$69.76 from \$66.49 in 1958. The increase was due to a rise in average consumption of 5.1 per cent to 4,338 kilowatt-hours from 4,128. Averages varied widely from province to province, the low of 1,617 kilowatt-hours being recorded in Prince Edward Island and the high of 5,993 kilowatt-hours being registered in Manitoba. While many utilities do not distinguish between farm and domestic customers in their records, those that have reported farm service separately show an average rise of 10.9 per cent to 4,086 kilowatt-hours from 3,686 in consumption and an increase in the average annual bill to \$93.05 from \$86.46.

Electric utilities reported an expenditure of \$19,285,057 on fuel for thermal electric plants in 1959, a decrease of 1.9 per cent from the \$19,655,433 reported one year earlier. The amount spent on oil increased 19.1 per cent to \$5,240,215 from \$4,399,212 and on natural gas 7.3 per cent to \$4,957,671 from \$4,618,487. At the same time, expenditures for coal declined 14.6 per cent to \$9,087,171 from \$10,637,734.

Coal accounted for only 35.8 per cent of total thermal generation in 1959 against 46.2 per cent in 1958, while natural gas was responsible for 50.2 per cent compared with 40.2 per cent one year earlier. Consumption of natural gas in thermal plants increased by about one third in Saskatchewan and Alberta and was reported for the first time in Ontario, where it was used to generate 6,196 thousand kilowatt-hours. Production based on petroleum fuels gained slightly, accounting for 13.9 per cent of the total, compared with 13.6 per cent in 1958.

Wages and salaries paid by the electric utility industry amounted to \$182,789,000 in 1959, a rise of 7.4 per cent over the \$170,211,000 reported in 1958. Publicly-operated utilities reported wages and salaries totalling \$133,505,000 in 1959, up 9.2 per cent from the \$122,208,000 in 1958 while privately-operated utilities paid \$49,284,000 as against \$48,003,000 an increase of 2.7 per cent. Employees, excluding construction workers, increased in number to 39,440 from 39,394 a total of 28,685 being employed by publicly-operated utilities versus 28,149 in 1958; and 10,755 by privately-operated utilities versus 11,245 one year earlier.

Total assets of the electric utility industry stood at \$6,809,757,000 at the end of 1959 compared with \$6,329,269,000 one year earlier, a rise of \$480,488,000 or 7.6 per cent. Fixed assets, after depreciation, amounted to \$5,748,597,000 as against \$5,373,827,000.<sup>r</sup> While most of the increase was reflected in a rise in long term debt to \$4,213,792,000
