dealing with

**ELECTRIC POWER**

Catalogue number	Title	Price
<b>Annual</b>		
57-201	Electric and Gas Meter Registrations. Approx. 242 pp. Meter registrations by province, county or census division, company and place served, by type of service.....	\$2.50
57-202	Electric Power Statistics. Approx. 43 pp. Summary and detailed analyses of generation and use of electric power in Canada, power plant equipment, customers, employees, salaries and wages and financial statistics .....	.75
57-203	Electricity Bills for Domestic, Commercial and Small Power Service. Approx. 15 pp. Includes an annual index of electricity bills for domestic service and bills for light and power in cities and representative municipalities .....	.50
57-204	Electric Power Survey of Capability and Load. Approx. 45 pp. Current and projected data of capability and load of major producers of electric energy in Canada.....	.75
<b>Monthly</b>		
57-001	Electric Power Statistics. Approx. 4 pp. Production by utilities and industrial establishments, imports and exports, power made available for use in Canada, amount used in electric boilers, by provinces..... per copy, 10¢; per year	1.00
<b>Occasional</b>		
57-502	Inventory of Prime Mover and Electric Generating Equipment. Approx. 120 pp. A list of generating plants in Canada by ownership, showing the location, year of installation, name-plate rating and other details of each unit, as at December 31, 1961 .....	1.50

*Subscription orders should be sent to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, Ottawa, Canada, with enclosed remittances made payable to the Receiver General of Canada.*

## **SYMBOLS**

The interpretation of the symbols used in the text and tables throughout this publication is as follows:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- \* revised figures.

## INTRODUCTION

Statistics presented in this report fall into two main categories: statistics based on the combined reports of electric utilities and industrial establishments, and statistics based on data received from utilities only. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy which they have either generated or purchased. They are referred to as the electric utility industry. Industrial establishments are defined, for the purpose of this report, as companies or individuals which generate electricity mainly for their own use. Statistics based on the combined reports of both utilities and industrial establishments include generating capacity, production and disposal of electric energy, revenue received from the sale of electricity, and customers. Statistics applicable only to the electric utility industry include pole line, circuit mileage, transformers, fuel consumption, employees, wages and salaries and other financial data.

The current series of electric power statistics dates back only to 1956. Earlier reports entitled "Central Electric Stations" were concerned solely with the electric utility industry and hence excluded statistics relating to power produced by industrial establishments for own use. Data relating to power sold by industrial establishments was, however, included.

In the revised series, all firms are classed as either utilities or industrial establishments and separate statistics are compiled for each group. Energy disposed of by industrial establishments is then combined with that disposed of by utilities in order to present statistics roughly comparable with those compiled for the electric utility industry in earlier years. One major difference is that many blocks of energy formerly classed as sales are now treated as produced for own use, since the transfer of energy was found to be between plants within the same organization.

In 1956, because of the difficulty of separating line losses of industrial producers into losses relating to sales and losses relating to energy produced for own use, total industrial losses were presented under "Disposal of Energy" in Table 4. Commencing with 1957, losses associated with energy generated for own use are shown as a separate item under "Energy Made Available", Table 3.

Total installed generating capacity in Canada at the end of 1961 amounted to 24,091,368 kilowatts, 4.5 per cent more than the revised total of 23,048,677 kilowatts in 1960. Utilities accounted for 19,492,142 kilowatts compared with 18,432,424 kilowatts in 1960, while industry had a capacity of 4,599,226 kilowatts and 4,616,253 kilowatts in 1961 and 1960 respectively. Hydraulic installations accounted for

78.9 per cent of the total and thermal plants, 21.1 per cent, as compared to 80.9 and 19.1 respectively, in 1960. New thermal installations in 1961 exceeded new hydraulic installations for the first time in history.

Quebec had the largest generating capacity at 9,138,934 kilowatts or 37.9 per cent of the national total, followed by Ontario with 32 per cent and British Columbia with 13 per cent. The largest increase in generating capacity was in Ontario, where the increase amounted to 638,486 kilowatts. Quebec increased its capacity by 218,587 kilowatts, Manitoba by 45,342, New Brunswick by 39,963, British Columbia by 36,894 and Saskatchewan by 23,996 kilowatts. The report "Inventory of Prime Mover and Electric Generating Equipment as at December 31, 1961" Catalogue No. 57-502 gives additional details on generating stations.

The largest thermal generating capacities were in Ontario with 40 per cent, Saskatchewan and Alberta with 13 per cent each, British Columbia with 9 per cent and Nova Scotia with 7 per cent.

In Ontario, one unit of 200,000 kilowatts and one unit of 300,000 kilowatts were added to the Richard L. Hearn and Lakeview thermal plants respectively. A 47,500 kilowatt unit was installed in the Courtenay Bay plant in New Brunswick.

The largest increase in hydraulic capacity was in Quebec where the third stage of the Beauharnois development was completed with the addition of two 55,250 kilowatt units in 1961. Two 43,700 kilowatt units were installed in the Otter Rapids plant in Ontario.

Net generation (total generation less energy used in generating station service) decreased 0.6 per cent in 1961 to 113,713,318 thousand kilowatt-hours from 114,457,194<sup>f</sup> thousand kilowatt-hours one year earlier. Generation by electric utilities increased 0.3 per cent to 89,388,635 thousand kilowatt-hours from 89,156,401<sup>f</sup> thousand but accounted for 78.6 per cent of total production compared with 77.9 per cent in 1960. Generation by industry went down to 24,324,683 thousand kilowatt-hours from 25,300,793 thousand a year earlier. This decline reflects the mild recession experienced in 1961 and the three month shut-down of the Kitimat plant in British Columbia. Consumption in electric boilers decreased 18.4 per cent from 7,357,708 thousand kilowatt-hours in 1960 to 6,002,738 thousand kilowatt-hours in 1961. The industry's share of net generation decreased to 21.4 per cent in 1961 from 22.1 per cent in 1960. Generation from hydraulic facilities amounted to 91.4 per cent while thermal was 8.6 per cent. Although Quebec had 37.9 per cent of the total generating capacity in Canada, it accounted for 44 per cent of the total generation, followed by Ontario with 31 per cent and British Columbia with 12 per cent.

Electric Energy consumption increased 1.5 per cent, although total generation decreased 0.6 per cent. As a result, imports were increased to 1,394,014 thousand kilowatt-hours from 356,878 thousand and exports decreased 24.3 per cent to 4,157,531 thousand kilowatt-hours from 5,495,572<sup>f</sup> thousand.

Of the total reported available for use in Canada in 1961, some 22,392,037,000 kilowatt-hours, including 678,274,000 estimated as losses, represented generation by industrial establishments for own use. This compares with 22,861,155,000 kilowatt-hours in 1960 and reflects a decrease of 469,118,000 kilowatt-hours or 2.1 per cent.

Total sales of electricity to ultimate customers increased 3.9 per cent in 1961 to 79,874,233 kilowatt-hours from the 1960 total of 76,862,953<sup>f</sup>. Power customers purchased 48,500,464,000 kilowatt-hours or 60.7 per cent of the total (62.9<sup>f</sup> per cent in 1960); domestic and farm customers, 21,979,672,000 or 27.7 per cent (26.5<sup>f</sup> in 1960); and commercial customers, 8,667,284,000 or 10.8 per cent (9.8<sup>f</sup>). Street lighting accounted for the remaining 726,813,000 kilowatt-hours of electricity sold. In addition, some 8,697,643,000 kilowatt-hours of energy available for disposal were reported lost and unaccounted for. This compares with 9,594,392,000<sup>f</sup> kilowatt-hours in 1960.

A 3.5 per cent rise in ultimate customers brought the total to 5,375,445 from 5,188,252 in 1960. Domestic and farm customers increased 3.8 per cent to 4,716,819 from 4,542,780, while the number of commercial customers showed a moderate rise to 548,112 from 534,691<sup>f</sup>. Power customers dropped 1.0 per cent in 1961 to 104,332 from 105,398<sup>f</sup>.

Revenue received from sales to ultimate customers totalled \$858,878,000, up 6.5 per cent from the 1960 total of \$806,697,000<sup>f</sup>. Domestic and farm customers produced revenues of \$346,807,000 versus \$326,543,000<sup>f</sup>; commercial customers, \$166,666,000 versus \$147,318,000<sup>f</sup>; power customers, \$327,461,000 versus \$316,650,000<sup>f</sup> and street lighting customers, \$17,944,000 versus \$16,186,000<sup>f</sup>. Revenue obtained from export sales amounted to \$9,552,000 compared with \$14,351,000 in 1960.

There was little change in the average domestic and farm service revenue per kilowatt-hour, which was 1.58 cents.

The average annual bill for domestic and farm customers rose 2.3 per cent in 1961 to \$73.53 from \$71.88<sup>f</sup> in 1960. The increase was due to a rise in average consumption of 3.8 per cent to 4,660 kilowatt-hours from 4,490<sup>f</sup>. Averages varied widely from province to province, the low of 1,934 kilowatt-hours being recorded in Prince Edward Island and the high of 6,535 kilowatt-hours being registered in Manitoba. While many utilities do not distinguish between farm and domestic customers in their records, those that have reported farm service separately show an

average rise of 7.1 per cent to 4,654 kilowatt-hours from 4,345 in consumption and an increase in the average annual bill to \$99.52 from \$96.52<sup>f</sup>. The average cost of farm service dropped from 2.22 to 2.14 cents per kilowatt-hour.

Electric utilities reported an expenditure of \$24,673,199 on fuel for thermal electric plants in 1961, an increase of 13.8 per cent from the \$21,679,446<sup>f</sup> reported one year earlier. The amount spent on oil increased 8.2 per cent to \$6,924,415 from \$6,397,083<sup>f</sup> and on natural gas 22.4 per cent to \$6,323,906 from \$5,168,443<sup>f</sup>. At the same time, expenditure for coal rose 12.9 per cent to \$11,424,878 from \$10,113,920<sup>f</sup>.

Coal accounted for 41.6 per cent to total thermal generation in 1961 against 39.1<sup>f</sup> per cent in 1960, while natural gas was responsible for 43.5 per cent compared with 45.3 per cent, one year earlier. Production based on petroleum fuels increased 11.2 per cent over the 1960 figure.

Wages and salaries paid by the electric utility industry amounted to \$198,416,000 in 1961, a rise of 4.3 per cent over the \$190,204,000<sup>f</sup> reported in 1960. Publicly-operated utilities reported wages and salaries totalling \$146,828,000 in 1961, up 4.3 per cent from the \$140,758,000<sup>f</sup> in 1960, while privately-operated utilities paid \$51,588,000 as against \$49,446,000<sup>f</sup>. Employees, excluding construction workers, showed a decline in number to 39,389 from 41,034<sup>f</sup> in 1960. A total of 28,884 were employed by publicly-operated utilities versus 30,534<sup>f</sup> in 1960, and 10,505 by privately-operated utilities versus 10,500 one year earlier.

Total assets of the electric utility industry stood at \$7,599,953,000 at the end of 1961 compared with \$7,282,285,000<sup>f</sup> one year earlier, a rise of \$317,668,000 or 4.4 per cent. Total electric utility fixed assets after depreciation amounted to \$6,456,858,000 as against \$6,180,891,000<sup>f</sup> in 1960, an increase of \$275,967,000. This increase in fixed assets was financed by an increase of \$360,748,000 in long term debt.

Operating revenues of electric utilities were 5.8 per cent higher in 1961, rising to \$1,149,547,000 from the 1960 total of \$1,086,983,000<sup>f</sup>. Operating expenses rose 7.4 per cent to \$744,649,000 from \$693,227,000<sup>f</sup> and operating income increased 2.8 per cent to a new high of \$404,898,000. Net income in 1961, therefore, rose 15.6 per cent to \$118,210,000 from \$102,219,000<sup>f</sup>.

Federal, provincial and municipal taxes paid by electric utilities in 1961 amounted to \$75,487,000, a decrease of 1.6 per cent from the \$76,676,000<sup>f</sup> paid in 1960. Federal taxes decreased to \$39,943,000 from \$44,060,000<sup>f</sup> in 1960, provincial taxes, however, increased to \$15,294,000 from \$13,999,000 and municipal taxes increased to \$20,250,000 in 1961 from \$18,617,000<sup>f</sup> in 1960.

Utilities' expenditures on capital and repair projects for generating, transmission and distribution facilities (Table 15) showed an increase of 60 million dollars to 382 million in 1961 from 322 million in 1960 as compared to 365 million in 1959.

Table 16 gives an historical summary of supply and demand for the years 1949-60. The 1960 publication contained an all-Canada supply and demand tabulation. This year the tabulation has been revised and expanded to include supply and demand figures for each province.

The industrial consumption of electric energy is based, in part, on data collected by the Industry and Merchandising Division of the Dominion Bureau of Statistics. Since Industry and Merchandising reports are concerned primarily with consumers rather than producers of electric energy and are completed on the basis of different concepts and for different reporting periods, considerable difficulty is encountered in reconciling the two sets of data. For example, energy transferred between two establishments within the same organization may be reported under purchases in Industry and Merchandising reports but as produced for own use in the Electric Power Statistics reports.

In order to bring the different concepts to a common basis, the "generated for own use" and "purchased" figures are adjusted from the figures published by the Industry and Merchandising Division and are in conformity with the figures used in Electric Power Statistics.

Consumption of electric energy in each province by the various manufacturing groups is of a confidential nature. As a result, only the total manufacturing consumption has been shown in the provincial tabulations in Table 16.

In the eleven years, 1949-60, total generation has increased at an annual compound rate of 7.6 per cent. The largest increase is 13.8 per cent in Alberta followed by British Columbia, Nova Scotia and Prince Edward Island with increases of 12.0 per cent.

Net hydro generation increased at an annual compound rate of 7.0 per cent between 1949 and 1960 while net thermal generation was increasing at a 10.4 per cent rate. The latter increase was due mainly to the large thermal installations in Ontario.

Increased residential and farm usage of electric energy resulted in a 12.3 per cent compound growth rate. Of the individual manufacturing industries, mining and smelting showed the largest growth rate (7.2 per cent) compared with a total industrial consumption increase of 6.5 per cent.

Commercial and other consumption rose from 5,426,113 thousand kilowatt-hours, in 1949 to 12,385,046 thousand kilowatt-hours in 1960, an increase of 7.8 per cent. Included in the commercial category "consumption at power rates" are such establishments as large stores, hotels, street railways, radio stations etc.
