## INTRODUCTION

This report includes statistics for industry 572 - Electric Power of the Standard Industrial Classification Manual (Catalogue No. 12-501) as well as commodity statistics for industrial establishments with generating facilities.

Energy generation of 191.1 billion kWh. was an increase of 8.3 % over the 176.4 billion kWh. in 1968. Hydro plants contributed 78.1 % of the generation although hydraulic installations account for only 68.3 % of the total capacity. Total generating capacity was 39.6 million kW., an increase of approximately 3.7 million kW. during the year.

## REVIEW OF SURVEY RESULTS

### Capacity

Total generating capacity in Canada at the end of 1969 amounted to 39,591,841 kW., 10.3 % more than the total of 35,908,497 kW. in 1968. Utilities accounted for 34,324,618 kW. compared with 30,599,012 kW. in 1968, while industry had a capacity of 5,267,223 kW. in 1969, down from 5,309,485 kW. in 1968. Hydraulic installations in 1969 accounted for 68.3 % of the total and thermal plants 31.7 % compared with 69.5 % and 30.5 % in 1968. New hydraulic installations again in 1969 exceeded new thermal installations by 464,166 kW.

Quebec had the largest generating capacity at 13,237,000 kW. or 33.4 % of the national total, followed by Ontario with 31.5 % and British Columbia with 13.7 %. The largest increase in generating capacity was in Quebec where the increase amounted to 1,436,185 kW. Ontario increased its capacity by 1,160,460 kW., British Columbia by 412,827 kW., Nova Scotia by 224,990 kW., Saskatchewan by 149,943 kW., Alberta by 149,105 kW. and New Brunswick by 100,696 kW. The report "Electric Power Statistics Vol. III, Inventory of Prime Mover and Electric Generating Equipment" Catalogue No. 57-504, gives additional details on generating stations.

The largest thermal generating capacities were in Ontario with 46.9 % of the Canada total, Alberta with 12.6 %, British Columbia with 11.7 % and Saskatchewan with 6.7 %.

The greatest increase in the thermal capacity occurred in Ontario where two units totalling 1,000,000 kW. were placed in service at Ontario Hydro's Lambton station. An additional unit of 150,000 kW. was installed by Nova Scotia Power Commission at their Trenton plant; the first of two 150,000 kW. generating units was placed in service by Saskatchewan Power Commission at their Boundary Dam plant and one unit of 150,000 kW. was brought on line by Alberta's Canadian Utilities Limited at their Battle River plant. The New Brunswick Electric Power Commission brought into service one unit of 100,000 kW. at the new Dalhousie station.

The increase in hydraulic capacity in Quebec was accounted for by the Outardes 3 and Outardes 4 generating stations where four units totalling 1,400,000 kW. were put into service during 1969. In British Columbia two units totalling 454,000 kW. came on line in British Columbia Hydro and Power Authority's Gordon M. Shrum station. Ontario Hydro added two additional units at each of Aubrey Falls and Stewartville generating stations during the year totalling 222,000 kW. Manitoba Hydro added a sixth unit of 34,000 kW. to the Kelsey generating plant.

## INTRODUCTION

Le présent bulletin contient des statistiques sur le sous-groupe 572 - Énergie électrique du Manuel de la classification type des industries (numéro du catalogue 12-501) de même que des statistiques sur l'électricité pour les établissements industriels pourvus d'installations électrogènes.

La production de 191.1 milliards de kWh. représente une augmentation de 8.3 % par rapport aux 176.4 milliards de kWh. de 1968. Les centrales ont produit 78.1 % de cette énergie mais les installations hydrauliques ont fourni seulement 68.3 % de l'énergie totale. La puissance génératrice totale a été de 39.6 millions de kW., ce qui représente une augmentation d'environ 3.7 millions de kW.

## REVUE DES RÉSULTATS DE L'ENQUÊTE

### Puissance génératrice

La puissance génératrice totale au Canada à la fin de 1969 était de 39,591,841 kW., soit 10.3 % de plus qu'en 1968 (35,908,497 kW.). Les services ont produit 34,324,618 kW. contre 30,599,012 kW. en 1968 et l'industrie 5,267,223 kW. en 1969, ce qui représente une diminution par rapport à 1968 (5,309,485 kW.). En 1969, les installations hydrauliques représentaient 68.3 % du total et les installations thermiques, 31.7 %, contre 69.5 % et 30.5 % en 1968. Une fois de plus en 1969, les nouvelles installations hydrauliques ont surpassé les nouvelles installations thermiques de 464,166 kW.

La province de Québec possédait la plus grande puissance génératrice, soit 13,237,000 kW. ou 33.4 % de la puissance nationale, suivie de l'Ontario avec 31.5 % et de la Colombie-Britannique avec 13.7 %. La plus forte augmentation de puissance génératrice a été au Québec (+ 1,436,185 kW.). L'Ontario a accru sa puissance génératrice de 1,160,460 kW., la Colombie-Britannique, de 412,827 kW., la Nouvelle-Écosse, de 224,990 kW., la Saskatchewan, de 149,943 kW., l'Alberta, de 149,105 kW. et le Nouveau-Brunswick de 100,696 kW. Le bulletin "Statistique de l'énergie électrique, volume III, Inventaire des moteurs primaires et des générateurs électriques" (n° 57-504) contient d'autres renseignements sur les centrales.

L'Ontario (46.9 %), l'Alberta (12.6 %), la Colombie-Britannique (11.7 %) et la Saskatchewan (6.7 %) possédaient les puissances génératrices thermiques les plus élevées du Canada.

L'Ontario a connu la plus forte augmentation de puissance thermique, deux unités totalisant 1,000,000 de kW. ayant été mis en service à la centrale de Lambton de l'Ontario Hydro. Une autre unité de 150,000 kW. a été installée par la Nova Scotia Power Commission, à sa centrale de Trenton; la Saskatchewan Power Commission a mis en service la première unité de 150,000 kW. à sa centrale de Boundary Dam et l'Alberta's Canadian Utilities Limited a aménagé une unité de 150,000 kW. à sa centrale de Battle River. La New Brunswick Electric Power Commission a commencé à utiliser une unité de 100,000 kW. à la nouvelle centrale de Dalhousie.

L'augmentation de la puissance hydraulique au Québec est due aux centrales Outardes 3 et Outardes 4; en effet, quatre unités totalisant 1,400,000 kW. ont été mises en service en 1969. En Colombie-Britannique, deux unités totalisant 454,000 kW. ont commencé à produire de l'énergie à la centrale Gordon M. Shrum grâce à la British Columbia Hydro and Power Authority. L'Ontario Hydro a ajouté deux autres unités à chacune des centrales d'Aubrey Falls et de Stewartville d'une capacité totale de 222,000 kW. Le Manitoba Hydro a ajouté une sixième unité de 34,000 kW. à la centrale de Kelsey.

### Generation

Net generation (total generation less energy used in generating station service) increased 8.3 % in 1969 to 191,102,230,000 kwh. from 176,378,275,000 kwh. one year earlier. Generation by electric utilities increased 9.4 % to 157,460,746,000 kwh. from 143,883,-385,000 kwh. accounting for 82.4 % of the total production. Generation by industry also increased 3.5 % to 33,641,484,000 from 32,494,890,000 kwh. a year earlier.

Generation from hydraulic facilities amounted to 78.1 % of the total while thermal was 21.9 %.

Although Quebec had only 33 % of total generating capacity in 1969, it accounted for 36 % of total generation, followed by Ontario with 32 % and British Columbia with 14 %.

While total generation rose by 8.3 %, electric energy made available in Canada increased by 7.2 %, with imports dropping 38.4 % to 2,740,152,000 kwh. from 4,451,239,000 kwh. and exports increasing 8.3 % to 4,320,141,000 kwh. from 3,988,314,000 kwh. Secondary energy consumption amounted to 1,659,749,000 kwh. compared with 1,978,313,000 kwh. in 1968.

### Sales

Total sales of electricity to ultimate customers (including sales to industrial establishments with generating facilities) increased 8.6 % to 147,255,-029,000 kwh. from the 1968 total of 135,654,855,000 kwh. Power customers purchased 82,770,521,000 kwh. or 56.2 % of the total (56.7 % in 1968); general service (commercial) customers, 22,642,428,000 kwh. or 15.4 % (14.5 % in 1968); domestic and farm customers, 40,446,-333,000 kwh. or 27.5 % (27.8 % in 1968). Street lighting accounted for the remaining 1,395,747,000 kwh. of electricity sold. In addition some 14,736,505,000 kwh. of energy available for disposal were reported as lost and unaccounted for. This compares with 14,419,439,000 kwh. in 1968.

A 3.0 % rise in the average number of customers (including industrial establishments with generating facilities) brought the total to 6,708,341 from 6,512,-556. General service (commercial) customers increased by 4.0 % to 691,879 from 665,237. Power customers, however, again decreased slightly by 0.6 % in 1969 to 88,116 from 88,680. The drop in number of power customers may again be attributed to the continuing trend of reclassifying power customers as general service (commercial) customers.

Revenue received from sales to ultimate customers totalled \$1,620,861,000, up 10.1 % from the 1968 total of \$1,472,567,000. Power customers produced revenues of \$603,066,000 versus \$550,385,000; general service (commercial) \$372,754,000 versus \$326,658,000; domestic and farm customers, \$607,336,000 versus \$560,671,000 and street lighting customers \$37,705,000 versus \$34,853,000. Revenue obtained from export sales to the U.S.A. amounted to \$15,014,000 compared with \$7,717,000 in 1968. Energy imported from U.S.A. in 1969 cost \$2,793,000, down from the 1968 figure of \$6,319,000.

The average revenue per kwh. for domestic and farm service rose 1.4 % to 1.50¢ from 1.48¢ in 1968. This represents the third increase in revenue per kwh. since 1953.

The average annual bill for domestic and farm customers rose 5.3 % in 1969 to \$102.62 from \$97.52 in '68. In addition to the increased cost per kwh. the

### Production

La production nette (production totale moins l'énergie pour l'entretien de la centrale) a augmenté de 8.3 % en 1969 atteignant 191,102,230,000 kwh. comparativement à 176,378,-275,000 kwh. en 1968. La production des services est passée de 143,883,385,000 kwh. à 157,460,746,000 kwh. (+ 9.4 %), ce qui représente 82.4 % de la production totale. La production de l'industrie a aussi augmenté (+ 3.5 %); elle a été de 33,641,-484,000 kwh. contre 32,494,890,000 kwh. un an plus tôt.

La production des installations hydrauliques représentait 78.1 % de la production totale alors que la production des centrales thermiques était de 21.9 %.

Le Québec ne possédait que 33 % de la puissance génératrice totale en 1969 mais il a produit 36 % de la production totale, suivi de l'Ontario avec 32 % et de la Colombie-Britannique avec 14 %.

La production totale s'est élevée de 8.3 % mais l'énergie électrique disponible au Canada a augmenté de 7.2 %; les importations ont diminué de 38.4 % tombant à 2,740,152,000 kwh. par rapport à 4,451,239,000 kwh. et les exportations ont atteint 4,320,141,000 kwh. (+ 8.3 %) comparativement à 3,988,-314,000 kwh. La consommation d'énergie non garantie s'est élevée à 1,659,749,000 kwh. contre 1,978,313,000 kwh. en 1968.

### Ventes

Les ventes totales d'électricité aux abonnés ultimes (y compris les ventes aux établissements industriels pourvus d'installations électrogènes) ont augmenté de 8.6 % atteignant 147,255,029,000 kwh. comparativement à 135,654,855,000 kwh. en 1968. Les abonnés de la catégorie "énergie" ont acheté 82,770,-521,000 kwh. soit 56.2 % du total (56.7 % en 1968); ceux de la catégorie "service général (commercial)", 22,642,428,000 kwh. soit 15.4 % (14.5 % en 1968); ceux de la catégorie "domestique et agricole", 40,446,333,000 kwh. soit 27.5 % (27.8 % en 1968). L'éclairage des rues a consommé le reste de l'énergie vendue (1,395,747,000 kwh.). De plus, environ 14,736,505,000 kwh. d'énergie disponible ont été déclarés dans les pertes et n'ont pas été pris en compte. La perte avait été de 14,419,439,000 kwh. en 1968.

Une augmentation de 3.0 % du nombre moyen d'abonnés (y compris les établissements industriels pourvus d'installations électrogènes) a fait passer le total de 6,512,556 à 6,708,341. Le nombre d'abonnés de la catégorie "service général (commercial)" a augmenté de 4.0 % atteignant 691,879 contre 665,337. La catégorie "énergie" a toutefois connu une légère diminution (0.6 %) en 1969, le nombre d'abonnés étant tombé de 88,680 à 88,116. Une fois de plus cette diminution peut être attribuable à la tendance continue à reclasser les abonnés de la catégorie "énergie" dans la catégorie "service général (commercial)".

Les recettes provenant des ventes aux abonnés ultimes ont atteint \$1,620,861,000, soit 10.1 % de plus qu'en 1968 (\$1,472,567,000). Les recettes provenant de la catégorie "énergie" ont été de \$603,066,000 contre \$550,385,000; celles de la catégorie "service général (commercial)" ont été de \$372,-754,000 comparativement à \$326,658,000; celles de la catégorie "domestique et agricole", de \$607,336,000 contre \$560,671,000 et celles de l'éclairage des rues, se sont élevées à \$37,705,000 comparativement à \$34,853,000. Les exportations vers les États-Unis ont produit des recettes de \$15,014,000 contre \$7,717,000 en 1968. L'énergie importée des États-Unis en 1969 a coûté \$2,793,000, ce qui représente une diminution par rapport à 1968 (\$6,319,000).

Les recettes moyennes par kwh. pour la catégorie "domestique et agricole" ont augmenté de 1.4 %; elles sont passées de 1.48¢ en 1968 à 1.50¢. Il s'agit là de la troisième augmentation de recettes par kwh. depuis 1953.

La facture moyenne par année de la catégorie "domestique et agricole" est passée de \$97.52 en 1968 à \$102.62 en 1969 (+ 5.3 %). Cette augmentation est due à l'accroissement du

higher bill was due to a rise in average annual consumption of 4.0 % to 6,834 kWh. from 6,571 in 1968. Average consumption varied widely from province to province, the low of 3,565 kWh. being recorded in Prince Edward Island and the high of 8,374 kWh. being registered in Manitoba. While many utilities do not distinguish between domestic and farm customers in their records, those that have reported farm service separately show an increase of 9.7 % to 10,042 kWh. from 9,155 kWh. and an increase in the annual bill to \$171.61 from \$156.26. The average cost of farm service remained at 1.71¢ per kWh.

#### Cost of Fuels and Resultant Generation

Electric utilities reported an expenditure of \$119,596,927 on fuel for thermal electric plants in 1969, an increase of 3.0 % from the \$116,131,236 reported one year earlier. The amount spent on oil increased slightly to \$32,066,394 from \$32,037,804 and on natural gas declined 28.6 % to \$11,136,153 from \$15,588,201. At the same time expenditure for coal increased 11.5 % to \$76,368,754 from \$68,472,370; imported coal cost \$56,577,600 or 74.1 % of the total expenditure for coal compared with 68.9 % in 1968.

Generation of electricity from coal operated facilities accounted for 69.2 % of total thermal generation in 1969 against 61.4 % in 1968; petroleum fuels were responsible for 17.5 % and natural gas 11.9 % in 1969 as compared with 19.0 % and 17.3 % respectively in 1968.

#### Financial Data

Wages and salaries paid by the electric utility industry amounted to \$391,265,000 in 1969, with publicly-operated utilities reporting a total of \$360,487,000 and privately-operated utilities \$30,778,000. Employees (excluding construction workers) showed a rise in number to 46,308 from 43,864 in 1968. A total of 42,096 was employed by publicly-operated utilities versus 39,606 one year earlier.

Total assets (after depreciation) of the electric utility industry stood at \$14,252,709,000 compared with \$13,067,611,000 one year earlier, an increase of \$1,185,098,000 or 9.1 %. Total electric utility fixed assets after depreciation amounted to \$12,488,413,000 as against \$11,441,527,000 in 1968, an increase of \$1,046,886,000. This increase in fixed assets was financed by increases of \$970,375,000 in long term debt, \$53,945,000 in current liabilities and \$41,622,000 in capital and surplus.

Operating revenues of electric utilities rose 10.4 % in 1969, increasing to \$2,054,275,000 from \$1,860,364,000. Operating expenses also rose to \$1,355,388,000 from \$1,230,837,000, an increase of 10.1 % and operating income increased by 11.0 % to \$698,887,000 from \$629,527,000. Net income in 1969 also rose 6.3 % to \$130,470,000 from \$122,756,000.

Municipal taxes in 1969 rose to \$49,597,000 from \$45,640,000. Provincial and federal taxes were reported at \$37,580,000 and \$3,296,000 compared with \$34,639,000 and \$4,746,000 respectively for the previous year.

Utilities' expenditures on capital and repair projects (Table 16) showed a decrease of \$8,700,000 to \$947,100,000 in 1969 from \$955,800,000 the previous year.

coût unitaire et à une hausse de 4.0 % de la consommation annuelle moyenne (de 6,571 kWh. en 1968 à 6,834 kWh. en 1969). La consommation moyenne varie grandement d'une province à l'autre, l'Île-du-Prince-Édouard a enregistré une faible consommation (3,565 kWh.) et le Manitoba, une forte consommation (8,374 kWh.). De nombreux services ne font pas la distinction entre la catégorie "domestique" et la catégorie "agricole" dans leurs déclarations mais ceux qui ont déclaré la catégorie "agricole" séparément ont connu une augmentation de 9.7 %; la consommation de cette catégorie est passée de 9,155 kWh. à 10,042 kWh. et la facture annuelle est passée de \$156.26 à \$171.61. Le prix moyen pour la catégorie "agricole" est resté de 1.71¢ par kWh.

#### Le coût du combustible et la production qui en résulte

Les services publics d'électricité ont déclaré des dépenses de \$119,596,927 en combustible pour les centrales thermiques en 1969, ce qui représente une augmentation de 3.0 % par rapport, un an plus tôt, à \$116,131,236. Le montant dépensé pour les combustibles pétroliers s'est accru légèrement atteignant \$32,066,394 comparativement à \$32,037,804 et pour le gaz naturel, il a diminué de 28.6 % atteignant \$11,136,153 (\$15,588,201 en 1968). Dans la même période, les dépenses pour le charbon se sont accrues de 11.5 % (\$76,368,754 comparativement à \$68,472,370); le charbon importé a coûté \$56,- 577,600 (74.1 % des dépenses totales pour le charbon comparativement à 68.9 % en 1968).

La production d'électricité à partir d'installations au charbon a atteint 69.2 % de la production thermique en 1969 comparativement à 61.4 % en 1968, les combustibles pétroliers en ont produit 17.5 % et le gaz naturel 11.9 % en 1969 comparativement à 19.0 % et 17.3 % en 1968.

#### Données financières

Les rémunérations versées par les services d'électricité ont atteint \$391,265,000 en 1969, les services publics ayant versé un montant de \$360,487,000 et les services privés \$30,778,000. Le nombre d'employés (sauf les travailleurs de la construction) a augmenté; il est passé de 43,864 en 1968 à 46,308 en 1969. Les services publics employaient 42,096 personnes en 1969, contre 39,606 en 1968.

L'actif total (après amortissement) des services d'électricité atteignait \$14,252,709,000 comparativement à \$13,067,611,000 un an plus tôt, ce qui représente une augmentation de 9.1 % (+ \$1,185,098,000). L'actif fixe après amortissement atteignait \$12,488,413,000 comparativement à \$11,441,527,000 en 1968, ce qui représente une avance de \$1,046,886,000. Cette augmentation est due à un accroissement de \$970,375,000 de la dette à long terme, de \$53,945,000 des exigibilités et de \$41,622,000 du capital et de l'excédent.

Les recettes d'exploitation des services d'électricité ont augmenté de 10.4 % en 1969, atteignant \$2,054,275,000 comparativement à \$1,860,364,000. Les dépenses d'exploitation aussi ont augmenté; elles sont passées de \$1,230,837,000 à \$1,355,388,000 (+ 10.1 %) et le revenu d'exploitation a progressé de 11 % (\$698,887,000 contre \$629,527,000). Le revenu net s'est également accru en 1969 (6.3 %) passant de \$122,- 756,000 à \$130,470,000.

Les taxes municipales sont passées de \$45,640,000 en 1968 à \$49,597,000 en 1969. Les taxes provinciales et fédérales étaient de \$37,580,000 et \$3,296,000 comparativement à \$34,639,000 et \$4,746,000 l'année précédente.

Les dépenses et de réparations (Tableau 16) ont diminué de \$8,700,000; elles sont tombées à 3947,100,000 en 1969 contre \$955,800,000 l'année précédente.

### Historical Perspective

Table 17 gives an historical summary of supply and disposal of electric energy for the years 1958-69. The industrial consumption of electric energy is based in part on data collected by the Manufacturing and Primary Industries Division of Statistics Canada in the Census of Manufactures returns. Due to the fact that these reports are concerned primarily with consumers rather than producers of electric energy and are completed on the basis of different concepts and for different reporting periods, considerable difficulty is encountered in reconciling the two sets of data. For example, energy transferred between two establishments within the same organization may be reported under purchases in Census of Manufactures reports but as produced for own use in Electric Power Statistics reports.

In order to bring the different concepts to a common basis, the "generated for own use" and "purchased" figures are adjusted from the figures in the Census of Manufactures publications and are in conformity with the figures used in the series "Electric Power Statistics".

Net hydro generation increased at an annual compound rate of 4.7 % between 1958 and 1969 while net thermal generation increased at a 17.6 % rate.

Residential and farm consumption of electric energy increased at a compound annual growth rate of 8.0 % over the 11 year period 1958-69 while consumption by industrial and commercial consumers (commercial consumers include deliveries to customers at power rates and at commercial rates) rose 4.7 % and 12.7 % respectively. Of the individual industries, iron and steel showed the largest growth rate of 9.7 % followed by mining with 7.8 %.

### Perspective historique

Le Tableau 17 renferme un sommaire chronologique de la balance de l'énergie électrique de 1958 à 1969. Les chiffres de la consommation industrielle d'électricité sont fondés en partie sur les renseignements recueillis par la Division des industries manufacturières et primaires de Statistique Canada lors des déclarations du recensement des manufactures. Comme ces déclarations se rapportent aux consommateurs plutôt qu'aux producteurs d'électricité et comme elles sont remplies en se fondant sur des concepts différents et pour des périodes différentes, de grandes difficultés surviennent lors de la conciliation des deux séries de données. Le transfert d'énergie entre deux établissements d'un même organisme, par exemple, peut être inscrit comme achat lors du recensement des manufactures mais comme une production d'autoconsommation dans les déclarations de la statistique de l'énergie électrique.

Afin d'uniformiser les divers concepts, les chiffres de la "production utilisée sur place" et "production achetée" sont rectifiés à partir des chiffres provenant du recensement des manufactures et conformément aux chiffres utilisés dans les publications traitant de la statistique de l'énergie électrique.

La production hydroélectrique nette a augmenté à un taux composé de 4.7 % entre 1958 et 1969 alors que la production thermique nette a augmenté à un taux de 17.6 %.

La consommation résidentielle et agricole d'énergie électrique a augmenté à un taux composé de 8.0 % au cours des 11 ans (1958 à 1969) alors que la consommation industrielle et commerciale (la consommation commerciale comprend les livraisons aux abonnés à des taux de puissance et à des taux commerciaux) s'est accrue de 4.7 % et 12.7 % respectivement. Parmi les branches d'activité, le fer et l'acier ont connu le plus haut taux d'accroissement (9.7 %), suivi des mines (7.8 %).

35	Total disposal of energy (12+18+19+20+26+27).	54,010,678 (38)	1,580,746	-	774,095	1,352,602	24,795,298	9,305,536
36	Inter-industrial establishment sales.	145,768	-	-	-	-	-	25,112

(1) Includes 8,128 thousand kWh. no value energy. (2) Includes 159,261 thousand kWh. no value energy. (3) Includes 115,440 thousand kWh. no value energy. (4) Includes 47,464 thousand kWh. no value energy. (5) Includes 8,022 thousand kWh. no value energy. (6) Includes 1,225,863 thousand kWh. no value energy. (7) Includes 405,935 thousand kWh. no value energy. (8) Includes 37,378 thousand kWh. no value energy. (9) Includes 31,951 thousand kWh. no value energy. (10) No value energy. (11) Includes 116,284 thousand kWh. no value energy. (12) Includes 105,836 thousand kWh. no value energy. (13) Includes 15,302 thousand kWh. no value energy. (14) Includes 8,036 thousand kWh. no value energy. (15) Includes 590 thousand kWh. no value energy. (16) Includes 1,243,317 thousand kWh. no value energy. (17) Includes 419,889 thousand kWh. no value energy. (18) Excludes sales to industrial establishments with generating and/or distributing facilities (see Table 6). (19) Includes 98,359 thousand kWh. no value energy. (20) Includes 15,513 thousand kWh. no value energy. (21) Includes 277,167 thousand kWh. no value energy. (22) Includes 357 thousand kWh. no value energy. (23) Includes 1,741,220 thousand kWh. no value energy. (24) Includes 132,145 thousand kWh. no value energy. (25) Includes 169,806 thousand kWh. no value energy. (26) Includes 386,916 thousand kWh. no value energy. (27) Includes 1,924,856 thousand kWh. no value energy. (28) Includes 138,344 thousand kWh. no value energy. (29) Includes 74,721 thousand kWh. no value energy. (30) Total disposal is 582,296 thousand kWh. less than total supply because utilities received 582,296 thousand kWh. less energy from industrial establishments in other provinces than they delivered. (31) Includes 34,121 thousand kWh. no value energy. (32) Includes 741,338 thousand kWh. no value energy. (33) Includes 368,342 thousand kWh. no value energy. (34) Total disposal is 654,527 thousand kWh. more than total supply because publicly-operated utilities received 654,527 thousand kWh. more energy from private utilities in other provinces than they delivered. (35) Total disposal is 1,938,177 thousand kWh. less than total supply because privately-operated utilities received 654,527 thousand kWh. less energy from public utilities and 1,283,650 thousand kWh. less from industrial establishments in other provinces than they delivered. (36) Includes 60,902 thousand kWh. no value energy. (37) Includes 32,973 thousand kWh. no value energy. (38) Total disposal is 582,296 thousand kWh. more than total supply because industrial establishments received 582,296 thousand kWh. more energy from utilities in other provinces than they delivered.

(1) Separate estimates not available for Yukon and Northwest Territories for years previous to 1967; totals for both included in Yukon.

(2) Many utilities cannot distinguish between domestic and farm, as they do not keep separate records. However, farm figures are tabulated as reported.

(3) Estimates not available for all provinces.

(4) Some apartment suites are included with homes.

(1) Les estimés du Yukon et les Territoires du Nord-Ouest ne sont pas séparés pour les années précédant 1967; le total est inclus à celui du Yukon.

(2) Un nombre de services d'électricité ne peuvent pas donner le détail de l'énergie à usages domestiques et l'énergie à usages agricoles, car ils ne tiennent pas de statistiques distinctes. Les données relatives à la consommation agricole sont données telles qu'elles ont été déclarées.

(3) Les estimés ne sont pas pour toutes les provinces.

(4) Quelquefois les appartements sont inclus avec les maisons.

(1) Mazout utilisé dans les centrales thermiques à charbon pour la production initiale de vapeur, sans production d'énergie électrique (589,837 gall. imp. en Nouvelle Écosse, 830,536 gall. imp. en Nouveau-Brunswick, 2,263,879 gall. imp. en Ontario et 297,526 gall. imp. en Manitoba).

(2) Mazout utilisé dans les centrales thermiques à gaz comme la veilleuse - 183,524 gall. imp.

(3) Combustible jet.

(4) Pétrole brut.

(5) Pied cube standard - 760 mm. mercure 60° F.

(6) Production nette, déduction faite de l'énergie utilisée pour l'entretien de la centrale.

(7) Production d'énergie nucléaire.

(8) Production d'énergie au moyen de propane.

(9) 2,711,000 kWh. sont exclus parce que les données pour la consommation de combustible sont indisponibles.

(1) For the years previous to 1966 "Energy used in own plant by utilities" is included with "Residual error of estimate". (2) Based on method of compilation used in previous years, exports to United States would be 257,857,000 kwh. and deliveries to other provinces would be 1,994,093,000 kwh. (3) Based on method of compilation used in previous years, receipts from other provinces would be 5,494,399,000 kwh. and exports to United States would be 3,550,055,000 kwh.

(4) Includes energy transmitted through Manitoba.
