ELECTRICITY BILLS FOR DOMESTIC, COMMERCIAL AND SMALL POWER SERVICE

1957

This report is based on rate tables supplied by the principal power companies and distributing systems in the country. It consists of the cost of definite quantities of electricity for specific uses and an annual index of electricity bills for domestic service. The monthly bills are computed to show the actual cost to consumers in the 131 municipalities covered by the report when selected quantities are used for specific purposes. The cost to the consumers includes not only the amounts accruing to the distributor, but also all federal, provincial and municipal taxes on such purchases. Discounts for prompt payment have been deducted from gross bills wherever granted.

Monthly bills can not be used to obtain the average cost of electricity consumed in any one municipality or to compare municipalities as to cost of electricity, except in a very general way. The unit cost or cost per kilowatt hour of electric energy normally varies according to the nature of the use and the magnitude of the consumption; and, because these factors vary so greatly as between types of user and between municipalities, an average cost for all electricity consumed in any municipality is of little value unless the nature of the uses and amount of consumption for each use is known. Further, industrial power costs vary as to whether the power used is primary or secondary (off-peak or interruptable power taken when available). Other important factors in determining costs of electricity are the relationship between the capacity of a system to produce and distribute electricity and the total consumption, and between the average rate of consumption per day and at different times of the day, and during the year. Because of the difficulty of giving proper weight to these many

factors, the Bureau of Statistics has not attempted to show average costs or to compare costs between municipalities. For these purposes the report should be used with the utmost caution.

Any attempt to determine which municipality in Canada enjoys the lowest cost for electricity might be difficult for reasons referred to above, but the following tables show the municipalities in Canada having the lowest bills for selected quantities and uses. While the domestic service bills will probably show the average for most municipalities, it is probable that with larger loads and consumptions for commercial use and for power, other municipalities would have smaller bills. The fact that no one municipality had the smallest bill for all types of consumption in the three classes of service indicates that caution should be exercised when making comparisons as between municipalities. The lowest bill in each case is in *italics*.

There is a possibility that some municipalities from which bills have not been collected may have as low or lower bills than those shown in the tables below, and consequently **there is no certainty that these bills are the lowest of any municipality in Canada**. Of the towns and cities shown, Jonquiere operates its own municipal hydro-electric plant and distribution system. Sault Ste. Marie operates its own municipal distribution system, buying power from a commercial hydro-electric plant. Belleville, Kingston, Ottawa, Niagara Falls, Trenton, Windsor and Westmount own and operate their own municipal distribution systems, buying power from the provincial hydro-electric systems. Commercial hydro-electric systems serve Cornwall, Ont., and Trail, B.C.

1. Lowest bill is shown in italics.

Domestic services include delivery of electricity to private residences for lighting, refrigeration, cooking, water heating and the operation of various electrical appliances. Commercial service includes delivery of electricity to stores, offices, factories, etc., mainly for lighting purposes. Outdoor sign lighting is generally in a separate category and the rates are different from those for commercial services. Street lighting is also in a separate class. Power service includes the delivery of electricity for the operation of electric motors.

The purpose of this presentation is to provide data for comparative purposes on the cost of electric service in the principal municipalities in Canada. Because of the various methods of computing costs it was necessary to select some arbitrary conditions, especially for the fixed charges, and use the same basic conditions in each municipality. In the large majority of municipalities the use of

these arbitrary conditions was not necessary, the rates containing a fixed charge and a block rate for all consumptions irrespective of appliances.

Consumptions of 500 and 1,000 kilowatt hours include electricity used for water heating. Except where the entire water heater load was on a flat rate basis, metered rates were used in working out these bills. For a few municipalities, where all water heating is on a flat rate basis, an arbitrary division was made between water heating and the metered services. A 500 kwh consumption was divided to include a metered consumption of 250 kwh plus an assumed 250 kwh consumed by a 500 watt heater. A consumption of 1,000 kwh was divided between 400 kwh metered and 600 kwh consumption assumed for a heater of 1,000 watts. To show the effect of flat rate water heaters a bill for 1,000 kwh including a water heater of 1,000 watts has been shown for all municipalities where such heaters are in general use.

The consumption for cooking varies greatly even between customers in the same municipality and, where the unit costs vary in different municipalities, the consumption for cooking tends to vary inversely with unit costs. Consequently, a cooking consumption which may be fairly representative for the majority of consumers in one municipality may be too large or too small for those in another municipality. This is also true of water heaters and other appliances, the consumption being governed largely by the unit price. Where service charges are based on two-wire or three-wire service, the higher charge was used only in calculating the bills for 300, 500 and 1,000 kilowatt hours.

Provincial taxes are in effect in Newfoundland (3 p.c.), Quebec (2 p.c.) and Saskatchewan (3 p.c.). In British Columbia a sales tax of 3 p.c. was imposed on August 1, 1948, and subsequently increased to 5 p.c. on April 1, 1954. In the province of Quebec many municipalities also impose a municipal sales tax. In 1949 Montreal and environs added a 1 p.c. education tax which has since been extended to many other municipalities throughout the province. All such taxes are included in the bills and the tables show where the provincial and municipal taxes apply.

The loads for which commercial and power bills were computed were the **billed** loads. In some municipalities the billed load was a percentage of the connected load. In other municipalities it was the peak reached over a period, often 30 minutes, and had no direct relation to the connected load. In still other municipalities it was the connected load. A consumption of 200 hours per month would mean 100 per cent use of the load, for an average of 8 hours per day for 25 days; and 100 hours use would mean 50 per cent use of the load for the same time. If the billed load were less than the connected load, the time or percentage use of

the connected load would be correspondingly reduced to produce the same result and the same consumption of electricity. In all cases the bills were computed for the consumption in kilowatt hours shown in the tables at rates in effect on December 31, 1957.

In practically all cases commercial and power bills were computed for unrestricted 24-hour service. A service restricted to 10 hours, from 7 a.m. to 6 p.m., is sold at a lower rate than the unrestricted 24-hour service in many municipalities. No penalty was included for low power factors and no allowances were made for customers' guarantee deposits with the distributor, or other miscellaneous factors which enter into the billing practice in some municipalities.

In the column headed, "Source of power", the letters "H" for hydraulic or water power and "T" for thermal, i.e., for fuel or steam, gas or oil engines, indicate the nature of the power used by the generating plant to produce the electricity sold in each municipality. In some cases hydro-electric plants have auxiliary or stand-by thermal engines used for peak loads or in emergencies. Such plants are classed as hydraulic.

The annual index is for the cost of electricity to consumers for domestic or residential use only and is not an index of the cost of power for industrial or other purposes. In the 1956 report the index was revised from a 1935-39 to a 1949 base. The index, by provinces, was produced by computing changes in the bills for typical monthly consumptions in each of the 131 municipalities, weighted by the annual revenue received by power distributors in the year 1949. Weighted municipal indexes were combined to produce provincial indexes on the new base.

Annual Index¹ of Electricity Bills for Domestic Service, by Province, 1950-1957
(1949 = 100)

Province	1950	1951	1952	1953	1954	1955	1956	1957

Canada	106.1	108.3	110.7	115.7	116.3	116.3	115.8	115.4

1. Based on electricity rates in effect December 31 each year.

Only four provincial indexes were affected by changes in domestic service rates during 1957. In each case the index was lower than in the previous year. The Nova Scotia index declined to 114.3 from 114.8 reflecting a general reduction of rates in Yarmouth which more than offset increases in the under 500 kwh consumption categories in Bridgewater. Higher consumptions in Bridgewater, not affecting the index, were granted lower rates. In Quebec, the index dropped to 100.8 from 101.1 as a result of reductions in Joliette and Jonquiere. Higher bills in Pembroke were offset by reductions in Midland, Oshawa, Sarnia and Woodstock and the index for Ontario dropped to 130.1 from 130.8. In Manitoba, domestic service rates were reduced in St. Boniface and The Pas, bringing the index down to 98.4 from 99.1. The index for Canada declined to 115.4 from 115.8 in 1956.

Rate changes were also reflected in the bills for commercial and power services. In the Maritime Provinces, rates for commercial service were reduced in Amherst, Bridgewater and Sussex, but increased in Edmundston. Power rates also were in-

creased in Edmundston and in Bridgewater. Although no rate changes for commercial service were recorded in the province of Quebec, a revision in power rates for Joliette reduced the cost to the large consumer while increasing bills for the smaller consumptions. In Ontario, rates for both commercial and power services were reduced in Midland, Oshawa and Sarnia and for commercial service only in Owen Sound. In Woodstock, revised rates reduced the bills for commercial service and for lower power consumptions but increased the bills for higher consumptions. In New Toronto, revised commercial rates produced increases in some bills but reductions for the large consumer. Revisions in power rates were just the reverse with the large consumer paying more in 1957. In Ottawa, bills for commercial service showed reductions in the lower categories of consumption and increases in the higher; adjustments in power rates produced higher bills for anything over 50 hours use of load. Commercial bills in Pembroke were up over the previous year. In Manitoba, rates for both services were reduced in The Pas and increased in St. Boniface except for some categories of commercial services which showed reductions.

TABLE 1. Monthly Electricity Bills (Net) for Domestic Service in Canada as at December 31, 1957

1. Includes a metered consumption of 400 kw. hrs. for lighting, cooking and appliances plus a flat rate water heater of 1,000 watts.

2. Bills include a provincial sales tax of 3 p.c.

3. Includes surrounding area.

4. Bills include provincial sales tax of 2 p.c.

5. Bills include municipal sales tax of 2 p.c.

6. Bills include special tax of 1 p.c. for educational purposes.

7. Bills include a municipal tax of 25 cents.

8. Bills include a municipal sales tax of 1 p.c.

9. Computed on metered rate although most of water heater load is on a flat rate basis.

10. Consumption not available.

11. Includes flat rate water heater of 500 watts.

12. Includes flat rate water heater of 1,000 watts.

13. Bills include provincial education and hospital tax of 3 p.c.

14. No cooking or water heating service.

15. Bills include municipal tax of 2½ p.c.

16. Bills include provincial tax of 3 p.c.

17. Bills include surcharge of 5 p.c.

18. Bills include surcharge of 10 p.c.
