Reports Published by the  
Manufacturing and Primary Industries Division  
dealing with

**ELECTRIC POWER**

**Catalogue  
number**

**Title**

**Annual**

**57-201 Electric and Gas Meter Registrations.**

Meter registrations by province, company and type of meter.

**57-202 Electric Power Statistics, Vol. II — Annual Statistics.**

Summary and detailed analyses of generation and use of electric energy in Canada, power plant equipment, customers, employees, salaries and wages, financial statistics and historical tabulation of supply and disposal of electric energy.

**57-203 Electricity Bills for Domestic, Commercial and Small Power Service.**

Examples of electricity bills for domestic, commercial and small power service in cities and representative municipalities.

**57-204 Electric Power Statistics, Vol. I — Annual Electric Power Survey of Capability and Load.**

Current and projected data of capability and load of major producers of electric energy in Canada.

**Monthly**

**57-001 Electric Power Statistics.**

Production by utilities and industrial establishments, imports and exports, power made available for use in Canada, secondary energy used, sales to ultimate customers by rate category, cumulative monthly totals for year to date, by province.

**Occasional**

**57-503 Electric Power Statistics, Vol. III — Inventory of Prime Mover and Electric Generating Equipment.**

A list of generating plants in Canada by ownership, showing the location, year of installation, name-plate rating and other details of each unit, as at December 31, 1966.

*In addition to the selected publications listed above, the Dominion Bureau of Statistics publishes a wide range of statistical reports on Canadian economic and social affairs, including detailed reports on the 1961 and 1966 Censuses. A comprehensive catalogue of all current publications is available free on request from the Dominion Bureau of Statistics, Ottawa 3.*

**SYMBOLS**

The following standard symbols are used in Dominion Bureau of Statistics publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.

# ELECTRICITY BILLS FOR DOMESTIC, COMMERCIAL AND SMALL POWER SERVICE

## Examples of the Application of Rates

1968

### General

This report is based on rate tables supplied by the power companies and municipalities responsible for the distribution of electric energy in the cities and towns in this survey. It consists of the cost of definite quantities of electricity for specific uses and an annual index of electricity bills for domestic service. The monthly bills are computed to show the actual cost to consumers in the 172 municipalities covered by the report when selected quantities are used for specific purposes. The cost to the consumers includes not only the amounts accruing to the distributor, but also all federal, provincial and municipal taxes on such purchases. Discounts for prompt payment have been deducted from gross bills wherever granted.

### Uses

Monthly bills cannot be used to obtain the average cost of electricity consumed in any one municipality or to compare municipalities as to cost of electricity, except in a very general way. The unit cost or cost per kilowatt hour of electric energy normally varies according to the nature of the use and the magnitude of the consumption; and, because these factors vary so greatly as between types of user and between municipalities, an average cost for all electricity consumed in any municipality is of little value unless the nature of the uses and amount of consumption for each use is known. Further, industrial power costs vary as to whether the power used is primary or secondary (off-peak or interruptible power taken when available). Other important factors in determining costs of electricity are the relationship between the capacity of a system to produce and distribute electricity and the total consumption, and between the average rate of consumption per day and at different times of the day, and during the year. Because of the difficulty of giving proper weight to these many factors, the Bureau of Statistics has not attempted to show average costs or to compare costs between municipalities. For these purposes the report should be used with the utmost caution.

### Computations

Domestic services consist of delivery of electricity to private residences for lighting, refrigeration, cooking, water heating, house heating and the operation of various electrical appliances. Commercial service includes delivery of electricity to stores, offices, factories, etc., mainly for lighting purposes.

Outdoor sign lighting is generally in a separate category and the rates are different from those for commercial services. Street lighting is also in a separate class. Power service includes the delivery of electricity for the operation of electric motors.

The purpose of this presentation is to provide data for comparative purposes on the cost of electric services in Canada. Because of the various methods of computing costs, it was necessary to select some arbitrary conditions, especially for the fixed charges, and use the same basic conditions in each municipality. In the large majority of municipalities the use of these arbitrary conditions was not necessary, the rates containing a fixed charge and a block rate for all consumptions irrespective of appliances.

Consumptions of 700 and 1,000 kilowatt hours include electricity used for water heating. Except where the entire water heater load was on a flat rate basis, metered rates were used in working out these bills. For a few municipalities, where all water heating is on a flat rate basis, an arbitrary division was made between water heating and the metered services. A 700 kwh. consumption was divided to include a metered consumption of 350 kwh. plus an assumed 350 kwh. consumed by a 1,000 watt heater. A consumption of 1,000 kwh. was divided between 490 kwh. metered and 510 kwh. consumption assumed for a heater of 1,000 watts. To show the effect of flat rate water heaters, a bill for 1,000 kwh. including a water heater of 1,000 watts has been shown for all municipalities where such heaters are in general use.

A few municipalities apply a demand charge in addition to the energy charge for electricity used in house heating. In computing bills for house heating in these municipalities it was assumed that the maximum demand is 15 kilowatts. Where service charges are based on two-wire or three-wire service, the higher charge was used only in calculating the bills for 300, 500, 700 and 1,000 kilowatt hours.

### Changes in Bills during 1968

There were no changes in domestic, commercial or power bills in New Brunswick, Quebec, Saskatchewan or British Columbia. Changes in the other provinces were generally upward.

In Newfoundland, four of the six municipalities in the survey experienced increased bills while reductions occurred in Carbonear and Stephenville. The bills are now identical for all six municipalities. An increase in sales tax from 6 per cent to 7 per cent was partially responsible for the increase in bills.

Changes in Prince Edward Island consisted of decreases in electric heating bills and power service loads of 50 Kw. and 100 Kw. in Summerside.

In Nova Scotia there were increases in domestic, commercial and power service bills in Bridgewater and Glace Bay.

There were increases in domestic service bills in 26 of the 58 municipalities in the Ontario survey. In 10 other municipalities bills were increased for low monthly energy consumptions and decreased for the higher energy consumptions. Changes in commercial (general service) rates resulted in higher bills in 18 municipalities, lower in 1 municipality (Pembroke) and a mixture of higher and lower bills depending upon billed loads and energy consumptions in 17 municipalities. Power rates were increased in 23 municipalities while a mixture of higher and lower bills occurred as a result of rate changes in 15 municipalities.

With the exception of Winnipeg and The Pas, all municipalities in the Manitoba survey had increased bills for all rate categories of service.

Winnipeg bills were unchanged from 1967 and there were reductions in all rate categories in The Pas.

The only changes in Alberta were decreased commercial bills and increased power bills in Calgary.

#### Lowest Bills

Any attempt to determine which municipality in Canada enjoys the lowest cost of electricity might be difficult for reasons mentioned above. From the selected list of municipalities, which comprise this report, those having the lowest bills for selected quantities and uses are shown in the following tables.

While the domestic service bills will probably show the average for most municipalities, it is probable that with larger loads and consumptions for commercial use and for power, other municipalities would have smaller bills. The fact that no one municipality had the smallest bill for all types of consumption in the three classes of service indicates that caution should be exercised when making comparisons as between municipalities.

There is a possibility that some municipalities from which bills have not been collected may have as low or lower bills than those shown in the tables below, and consequently ~~there is no certainty that these bills are the lowest of any municipality in Canada.~~

Lowest Monthly Bills for Domestic Service, 1968
