SYMBOLS

The following standard symbols are used in Statistics Canada publications:

.. figures not available.

... figures not appropriate or not applicable.

— nil or zero.

-- amount too small to be expressed.

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

— néant ou zéro.

-- nombres infimes.

p nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

INTRODUCTION

This report is based on rate schedules supplied by the power companies and municipalities responsible for the distribution of electric energy in the 171 cities and towns covered in this survey. The monthly bills given in the tables have been computed to show the revenue accruing to the distributors from the sale of definite quantities of electricity used for specific purposes. Discounts for prompt payment have been deducted from gross bills whenever granted, but the bills themselves now exclude taxes levied on the sale of electricity by provincial and/or municipal authorities. This concept was used for the first time in the 1970 edition of this publication. In all previous editions the cost to consumer, inclusive of tax, was shown. This change in concept, coupled with the change in the domestic sector's consumption levels that has been made to reflect more closely present day conditions, should allow for easier international comparisons.

However, in order to maintain comparability with previous years' data, the footnotes used throughout the publication indicate the provincial and/or municipal taxes which must be added to the bills shown in the tables to arrive at the cost to the consumer.

Uses

Monthly bills cannot be used to obtain the average cost of electricity consumed in any one municipality or to compare municipalities as to cost of electricity, except in a very general way. The unit cost or cost per kilowatt-hour of electric energy normally varies according to the nature of the use and the magnitude of the consumption; and, because these factors vary so greatly as between types of user and between municipalities, an average cost for all electricity consumed in any municipality is of little value unless the nature of the uses and amount of consumption for each use are known. Further, industrial power costs vary as to whether the power used is primary or secondary (off-peak or interruptible power taken when available). Other important factors in determining costs of electricity are the relationship between the capacity of a system to produce and distribute electricity and the total consumption, and the ratio between the average load and the peak load, on a daily and yearly basis. Because of the difficulty of giving proper weight to these many factors, Statistics Canada has not attempted to show average costs or to compare costs between municipalities. For these purposes the report should be used with the utmost caution.

Computations

Domestic services consist of delivery of electricity to private residences for lighting, refrigeration, cooking, water heating, house heating and the operation of various electrical appliances. Commercial service includes delivery of electricity to stores, offices, factories, etc., mainly for lighting purposes. Outdoor sign lighting is generally in a separate category and the rates are different from those for commercial services. Street lighting is also in a separate class. Power service includes the delivery of electricity for the operation of electric motors.

The purpose of this presentation is to provide data for comparative purposes on the cost of electric services in Canada. Because of the various methods of computing costs, it was necessary to select some arbitrary conditions, especially for the fixed charges, and use the same basic conditions in each municipality. In the large majority of municipalities the use of these arbitrary conditions was not necessary, the rates containing a fixed charge and a block rate for all consumptions irrespective of appliances.

Ce bulletin se fonde sur les tarifs communiqués par les compagnies d'électricité et les municipalités chargées de la distribution d'énergie électrique dans les 171 villes et villages de l'enquête. Les factures mensuelles des tableaux ont fait l'objet de calculs permettant d'indiquer les recettes des distributeurs provenant de la vente de quantités déterminées d'énergie électrique destinées à des usages précis. Le cas échéant, on a déduit des montants bruts l'escompte accordé pour paiement rapide, mais les factures proprement dites excluent désormais les taxes prélevées sur la vente d'énergie électrique par les administrations publiques provinciales ou municipales. Cette méthode diffère de celle des éditions du présent bulletin publiées pour les années antérieures à 1970 et où figurait le prix payé par le consommateur, taxe comprise. De plus, les modifications apportées aux niveaux de consommation du secteur domestique et destinées à fournir une image plus précise de la réalité devraient faciliter la comparaison sur le plan international.

Cependant, pour pouvoir comparer les données avec celles des années précédentes, les renvois que l'on trouvera dans le présent bulletin donnent les taxes municipales ou provinciales qu'il faut ajouter aux montants des factures dans les tableaux pour obtenir le prix payé par le consommateur.

Utilité du rapport

Les factures mensuelles ne sauraient servir à établir le coût moyen de l'électricité utilisée dans une municipalité donnée ni à comparer le coût de l'électricité entre les diverses municipalités, sauf d'une manière très générale. Le coût unitaire ou le coût au kilowatt-heure de l'énergie électrique varie normalement selon la nature de l'utilisation et l'importance de la consommation; et, parce que ces facteurs varient tellement selon la classe d'utilisateurs et la municipalité, le coût moyen de l'électricité totale consommée dans une municipalité a peu de signification à moins que ne soient connues la nature des utilisations et la quantité consommée pour chacune. En outre, le prix de l'énergie utilisée par l'industrie varie selon que cette énergie est garantie ou non-garantie (consommée aux heures creuses ou de façon intermittente, selon les disponibilités). D'autre importants facteurs du calcul du coût de l'électricité sont le rapport entre la capacité de production et de distribution d'un réseau et la consommation, et le rapport entre l'appel maximal et l'appel moyen de puissance par jour et par année. À cause de la difficulté d'accorder à ces divers facteurs le poids qui leur revient, Statistique Canada n'a pas essayé d'établir le coût moyen ou de comparer le coût entre les municipalités. Pour ces buts, il faut se servir du rapport avec une extrême prudence.

Calculs

Le service domestique consiste à fournir l'électricité aux habitations privées pour l'éclairage, la réfrigération, la cuisine, le chauffage de l'eau et de l'habitation, enfin le fonctionnement de divers appareils électriques. Le service commercial consiste à fournir l'électricité aux magasins, bureaux, usines, etc., surtout pour l'éclairage. L'éclairage des enseignes extérieures tombe généralement dans une catégorie distincte et le tarif diffère de celui du tarif commercial. L'éclairage des rues est aussi dans une classe de tarif distincte. Le service d'énergie à la petite industrie comprend l'électricité destinée aux moteurs électriques.

Le but du présent document est de fournir des chiffres qui permettent de comparer le prix des services électriques du Canada. À cause de la diversité des méthodes de calcul des prix, il a fallu fixer arbitrairement certaines conditions, surtout quant aux frais fixes, et appliquer les mêmes conditions de base à chaque municipalité. Pour la grande majorité des municipalités, il n'a pas été nécessaire de recourir à ces conditions arbitraires, le tarif comportant un prix fixe et un taux forfaitaire pour toutes les consommations, sans égard aux appareils.

Consumptions of 500, 750 and 1,000 kilowatt-hours include electricity used for water heating. For flat rate water heating a consumption of 1,000 kwh. was divided between 490 kwh. metered and 510 kwh. consumption assumed for a heater of 1,000 watts. To show the effect of flat rate water heaters, a bill for 1,000 kwh. including a water heater of 1,000 watts has been shown for all municipalities where such heaters are in general use.

A few municipalities apply a demand charge in addition to the energy charge for electricity used in house heating. In computing bills for house heating in these municipalities it was assumed that the maximum demand is 15 kilowatts.

Changes in bills during 1973 were reported in all provinces, with the exception of Nova Scotia and Newfoundland, where rates remain unchanged since 1971.

In Prince Edward Island, the two municipalities surveyed showed increases at all levels of consumption in each of the three categories of service.

In New Brunswick the eight municipalities serviced by the New Brunswick Electric Power Commission remain unchanged. The municipality of Campbellton reported lower rates in both domestic and commercial service with increases in power service only. The municipality of Edmunston rates for domestic service remain unchanged, commercial rates were decreased and power service rates were increased.

In Quebec, most of the municipalities reported rate changes in 1973. Alma reported increases in domestic services while commercial rates showed a decrease. Coaticook reported increases at all levels in the three categories. Magog reported upward and downward changes in domestic services and increases in all commercial services. Hydro Quebec reported increases for all services in the 28 municipalities served. Westmount reported an increase in domestic rates and upward and downward rates in commercial services.

Ontario showed rate changes in domestic services in 38 of the 57 municipalities surveyed. With the exception of Etobicoke where both increases and decreases were noted, all municipalities reported higher domestic rates. Changes in commercial (general service) and power rates occured in 36 municipalities. Although the trend was toward higher rates, Niagara Falls and York reported a decrease in commercial and power aervices.

In Manitoba 8 of the 14 municipalities surveyed reported changes. The eight were: East Kildonan, Fort Garry, St. Boniface, St. James, St. Vital, Transcona, West Kildonan and Winnipeg. Changes in domestic rates were all upward in Winnipeg and all downward elswhere.

Changes (upward and downward) in domestic rates were recorded by the six reporting municipalities serviced by the Saskatchewan Power Corporation. No changes occurred in either commercial or power service.

Alberta reported changes in 4 of the 6 municipalities surveyed. The Calgary minimum bill decreased. Increases for all domestic, commercial and power service were noted. Edmonton, Lethbridge and Red Deer reported increases in all three categories of service.

Penticton was the only municipality in British Columbia to report rate changes. Domestic and

Les consommations de 500, 750 et 1,000 kilowatt-heures comprennent l'électricité utilisée pour chauffer l'eau. Pour chauffe-eau à tarif fixe une consommation de 1,000 kilowatt-heures a été partagée entre 490 kilowatt-heures de consommation mesurée au compteur et 510 kilowatt-heures de consommation attribuée à un chauffe-eau de 1,000 watts. Pour montrer l'effet de chauffe-eau à tarif fixe, une facture de 1,000 kilowatt-heures comportant la consommation d'un chauffe-eau de 1,000 watts est indiquée pour toutes les municipalités où ces chauffe-eau sont généralement utilisés.

Quelques municipalités ajoutent au prix de l'électricité utilisée pour le chauffage des habitations un supplément d'appel. En calculant les factures de chauffage des habitations de ces municipalités, on a supposé que l'appel maximum est de 15 kilowatts.

Des changements dans les factures d'électricité ont été enregistrés en 1973 dans toutes les provinces sauf en Nouvelle-Écosse et à Terre-Neuve où les tarifs n'ont pas changé depuis 1971.

À l'Île-du-Prince-Édouard, les deux municipalités enquêtées ont enregistré des augmentations à tous les niveaux de consommation dans chacune des trois catégories de service.

Au Nouveau-Brunswick, les tarifs en vigueur dans les huit municipalités desservies par la New Brunswick Electric Power Commission n'ont pas changé. La municipalité de Campbellton a déclaré des diminutions des tarifs au niveau de la consommation domestique et du service commercial à la seule exception du service à la petite industrie qui a enregistré des augmentations. Dans la municipalité d'Edmunston les tarifs pour la consommation domestique sont demeurés les mêmes; ceux du service commercial ont baissé et ceux du service à la petite industrie ont augmenté.

Au Québec, la plupart des municipalités ont indiqué des modifications des tarifs du service d'électricité en 1973. Alma a signalé des augmentations dans le service domestique et une diminution dans le service commercial. Coaticook a signalé des augmentations à tous les niveaux dans les trois catégories. Magog a signalé des hausses et des baisses dans les services domestiques et des augmentations dans tous les services commerciaux. L'Hydro Québec a déclaré qu'il y a eu augmentations pour tous les services dans les 28 municipalités qu'elle dessert. Westmount a signalé une augmentation des tarifs du service domestique et des hausses et des baisses dans les services commerciaux.

L'Ontario a enregistré des changements dans les tarifs domestiques dans 38 des 57 municipalités enquêtées. À l'exception de Etobicoke où à la fois des hausses et des baisses ont été enregistrées, toutes les municipalités ont déclaré des augmentations des tarifs domestiques. Les tarifs pour le service commercial (service général) et le service à la petite industrie ont changé dans 36 municipalités. Bien que la tendance générale ait été à la hausse, Niagara Falls et York ont déclaré une baisse des tarifs du service commercial et du service à la petite industrie.

Au Manitoba, 8 des 14 municipalités enquêtées ont indiqué des changements. Il s'agit de: East Kildonan, Fort Garry, St. Boniface, St. James, St. Vital, Transcona, West Kildonan et Winnipeg. Les variations des tarifs domestiques consistaient toutes en des hausses à Winnipeg et des baisses ailleurs.

Des changements (hausses et baisses) dans les tarifs domestiques ont été enregistrés dans les six municipalités enquêtées, desservies par la Saskatchewan Power Corporation. Aucun changement n'est survenu dans le service commercial ou le service à la petite industrie.

L'Alberta a déclaré des variations dans 4 des 6 municipalités enquêtées. À Calgary, la facturation du service minimum d'électricité a enregistré une baisse. Des augmentations ont été enregistrées pour les services domestiques, commerciaux et à la petite industrie. Edmonton, Lethbridge et Red Deer ont déclaré des augmentations dans les trois catégories de service.

En Colombie-Britannique, Penticton a été la seule municipalité à déclarer des variations des tarifs d'électricité. Les

commercial rates were all higher. Power rates showed both upward and downward changes.

Lowest Bills

Any attempt to determine which municipality in Canada enjoys the lowest cost of electricity might be difficult for reasons mentioned above. From the selected list of municipalities, which comprise this report, those having the lowest bills for selected quantities and uses are shown in the following tables.

While the domestic service bills will probably show the average for most municipalities, it is probable that with larger loads and consumptions for commercial use and for power, other municipalities would have smaller bills. The fact that no one municipality has the smallest bill for all types of consumption in the three classes of service indicates that caution should be exercised when making comparisons as between municipalities.

There is a possibility that some municipalities from which bills have not been collected may have as low or lower bills than those shown in the tables below, and consequently there is no certainty that these bills are the lowest of any municipality in Canada.

services domestiques et commerciaux ont subi des augmentations et le service à la petite industrie a connu à la fois des hausses et des baisses.

Les plus basses factures

Tout effort pour déterminer la municipalité du Canada qui bénéficie de l'électricité au plus bas prix peut être difficile, vu les raisons citées plus haut. Des municipalités choisies, sur lesquelles porte le présent rapport, celles qui bénéficient des plus basses factures pour des quantités d'électricité données sont présentées dans les tableaux qui suivent.

Si les factures d'électricité pour service domestique indiquent probablement la moyenne de la plupart des municipalités, il est probable qu'avec une augmentation de l'appel et de la consommation dans l'usage commercial et industriel les autres municipalités auraient des factures plus basses. Le fait qu'aucune municipalité ne jouisse de la plus basse facture pour tous les genres de consommation dans les trois classes de service indique qu'il y a lieu de se montrer prudent en faisant des comparaisons entre municipalités.

Il se peut que certaines municipalités dont les factures n'ont pas été recueillies aient des factures aussi basses ou plus basses que celles qu'indiquent les tableaux qui suivent; il n'est donc pas certain que les factures qui apparaissent dans les tableaux soient les plus basses parmi toutes les municipalités du Canada.
