SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

SIGNE CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

ABBREVIATIONS

n.e.s.: Not elsewhere specified.

S.I.C.: Standard Industrial Classification.

ABRÉVIATIONS

n.c.a.: Non classé(e)s ailleurs.

C.A.É.: Classification des activités économiques (titre français du système de classification industrielle de 1970).

NOTE

Unit of measure ton - refers to the short ton of 2,000 pounds.

NOTE

Inquiries about this publication should be addressed to the Energy and Minerals Section of the Manufacturing and Primary Industries Division in Ottawa (992-4021); or to a local office of the User Advisory Services Division:

St. John's (Nfld.) - (T.-N.)	(726-0713)
Halifax	(426-5331)
Montréal	(283-5725)
Ottawa	(992-4734)

NOTA

Unité de mesure tonne - réfère à tonne courte de 2,000 livres.

NOTA

Toutes demandes de renseignements sur la présente publication doivent être adressées à la Section de l'énergie et des minéraux de la Division des industries manufacturières et primaires, à Ottawa (992-4021); ou à un bureau local de la Division de l'assistance-utilisateurs situé aux endroits suivants:

Toronto	(966-6574)
Winnipeg	(985-3257)
Regina	(569-5403)
Edmonton	(425-5052)
Vancouver	(666-3394)

INTRODUCTION

This edition of "Electricity Bills" is the first to be presented under a revised format. The principal change is the calculation of bills as of January 1 rather than December 31. Other changes involve the fixed quantities of electric energy billed and the municipalities surveyed.

The data presented here were collected, edited and compiled by the Canadian Electrical Association. The CEA has in the past published these data but this service, starting with this edition, will now be carried on by Statistics Canada. All available revisions for the years 1973 to 1977 have been included.

The monthly bills given in the tables have been computed to show the revenue accruing to the distributors from the sale of definite quantities of electricity used for specific purposes.

Domestic services consist of delivery of electricity to private residences for lighting, refrigeration, cooking, water heating, house heating and the operation of various electrical appliances. Commercial service includes delivery of electricity to stores, offices, factories, etc., mainly for lighting purposes. Outdoor sign lighting is generally in a separate category and the rates are different from those for commercial services. Street lighting is also in a separate class. Power service includes the delivery of electricity for the operation of electric motors.

The purpose of this presentation is to provide data for comparative purposes on the cost of electric services in Canada. Because of the various methods of computing costs, it was necessary to select some arbitrary conditions, especially for the fixed charges and use the same basic conditions in each municipality. In the large majority of municipalities the use of these arbitrary conditions was not necessary, the rates containing a fixed charge and a block rate for all consumptions irrespective of appliances.

Uses

Monthly bills cannot be used to obtain the average cost of electricity consumed in any one municipality or to compare municipalities as to cost of electricity, except in a very general way. The unit cost or cost per kilowatt-hour of electric energy normally varies according to the nature of the use and the magnitude of the consumption; and, because these factors vary so greatly as between types of user and between municipalities, and average cost for all electricity

La présente édition de "Factures d'électricité" est la première à avoir fait peau neuve. Le principal changement porte sur la date de calcul des factures, qui est passée du 31 décembre au 1^{er} Janvier. Les autres s'appliquent aux quantités fixes d'énergie électrique et au nombre de municipalités enquêtées.

Les chiffres présentés ici ont été collectés, vérifiés et compilés par l'Association canadienne de l'électricité, comme par le passé. Leur publication ressortit maintenant à Statistique Canada, à compter de ce numéro. Toutes les révisions connues ont été apportées aux données des années 1973 à 1977.

Les factures mensuelles des tableaux ont fait l'objet de calculs permettant d'indiquer les recettes des distributeurs provenant de la vente de quantités déterminées d'énergie électrique destinées à des usages précis.

Le service domestique consiste à fournir l'électricité aux habitations privées pour l'éclairage, la réfrigération, la cuisson, le chauffage de l'eau et de l'habitation et enfin le fonctionnement de divers appareils électriques. Le service commercial consiste à fournir l'électricité aux magasins, bureaux, usines, etc., surtout pour l'éclairage. L'éclairage des enseignes extérieures tombe généralement dans une catégorie distincte et le tarif diffère de celui du tarif commercial. L'éclairage des rues est aussi dans une classe de tarif distincte. Le service d'énergie à la petite industrie comprend l'électricité destinée aux moteurs électriques.

Le but du présent bulletin est de fournir des chiffres qui permettent de comparer le prix des services électriques du Canada. À cause de la diversité des méthodes de calcul des prix, il a fallu fixer arbitrairement certaines conditions, surtout quant aux frais fixes et appliquer les mêmes conditions de base à chaque municipalité. Pour la grande majorité des municipalités, il n'a pas été nécessaire de recourir à ces conditions arbitraires, le tarif comportant un prix fixe et un taux forfaitaire pour toutes les consommations, sans égard aux appareils.

Utilité du bulletin

Les factures mensuelles ne sauraient servir à établir le coût moyen de l'électricité utilisée dans une municipalité donnée ni à comparer le coût de l'électricité entre les diverses municipalités, sauf d'une manière très générale. Le coût unitaire ou le coût au kilowatt-heure de l'énergie électrique varie normalement selon la nature de l'utilisation et l'importance de la consommation; et, parce que ces facteurs varient tellement selon la classe d'utilisateurs et la municipalité, le coût moyen de l'électricité totale consommée dans

consumed in any municipality is of little value unless the nature of the uses and amount of consumption for each use are known. Further, industrial power costs vary as to whether the power used is primary or secondary (off-peak or interruptible power taken when available). Other important factors in determining costs of electricity are the relationship between the capacity of a system to produce and distribute electricity and the total consumption and the ratio between the average load and the peak load, on a daily and yearly basis. Because of the difficulty of giving proper weight to these many factors, no attempt has been made to show average costs or to compare costs between municipalities. For these purposes the report should be used with the utmost caution.

Computations

Bills are computed on a net basis, including fuel and cost of service adjustments. Discounts for payments have been deducted from gross bills when applicable but the bills exclude taxes levied on sale of electricity by provincial and/or municipal authorities.

Both commercial and industrial bills are computed on the basis of 90% power factor. Delivery is at secondary voltage for commercial. Primary voltage where applicable for industrial is 12,470.

une municipalité a peu de signification à moins que ne soient connues la nature des utilisations et la quantité consommée pour chacune. En outre, le prix de l'énergie utilisée par l'industrie varie selon que cette énergie est garantie ou non garantie (consommée aux heures creuses ou de façon intermittente, selon les disponibilités). D'autres importants facteurs du calcul du coût de l'électricité sont le rapport entre la capacité de production et de distribution d'un réseau et la consommation et le rapport entre l'appel maximal et l'appel moyen de puissance par jour et par année. A cause de la difficulté d'accorder à ces divers facteurs le poids qui leur revient, on n'a pas essayé d'établir le coût moyen ou de comparer le coût entre les municipalités. Pour ces buts, il faut se servir du bulletin avec une extrême prudence.

Calculs

Les factures sont calculées sur une base nette et comprennent les rectifications au coût du combustible et du service. Les escomptes sur paiement ont, au besoin, été retranchés du montant brut tandis que les taxes perçues par la province ou la municipalité sur la vente d'électricité ne figurent pas.

Les factures commerciales et industrielles sont calculées à 90 % du facteur de puissance. Dans le cas des commerces, l'énergie fournie est en tension secondaire alors que pour l'industrie, la tension primaire de 12,470 volts s'applique lorsqu'il y a lieu.

TABLE 3. Industrial - Concluded

TABLEAU 3. Industriel - fin

Publications de la
Division des industries manufacturières et primaires
traitant de

L'ÉNERGIE ÉLECTRIQUE

Catalogue

Annuelles

- 57-202 Statistique de l'énergie électrique, Vol. II — Statistiques annuelles.
- 57-203 Factures d'électricité des services domestique, commercial et à la petite industries.
- 57-204 Statistique de l'énergie électrique, Vol. I — Enquête annuelle sur la puissance maximale et sur la charge des réseaux.
- 57-206 Statistique de l'énergie électrique, Vol. III — Inventaire des moteurs primaires et des générateurs électriques.

Mensuelle

- 57-001 Statistique de l'énergie électrique.

Outre les publications ci-dessus énumérées, Statistique Canada publie une grande variété de rapports statistiques sur le Canada tant dans le domaine économique que social. On peut se procurer gratuitement un catalogue complet des publications courantes à Statistique Canada, Ottawa (Canada), K1A 0T6.

Reports published by the
Manufacturing and Primary Industries Division
dealing with

ELECTRIC POWER

Catalogue

Annual

- 57-202 Electric Power Statistics, Vol. II - Annual Statistics.
57-203 Electricity Bills for Domestic, Commercial and Small Power Service.
57-204 Electric Power Statistics, Vol. I - Annual Electric Power Survey of
Capability and Load.
57-206 Electric Power Statistics, Vol. III - Inventory of Prime Mover and Electric
Generating Equipment.

Monthly

- 57-001 Electric Power Statistics.

In addition to the selected publications listed above,
Statistics Canada publishes a wide range of statistical reports
on Canadian economic and social affairs. A comprehensive cata-
logue of all current publications is available free on request
from Statistics Canada, Ottawa (Canada), K1A 0T6.
