ELECTRIC POWER

Catalogue number	Title	Price
	Annual	
57-201	Electric and Gas Meter Registrations. Approx. 150pp. Meter registrations by province, county or census division, company and place served, by type of service	\$1.50
57-202	Electric Power Statistics Vol. II - Annual Statistics. Approx. 70pp. Summary and detailed analyses of generation and use of electric power in Canada, power plant equipment, customers, employees, salaries and wages, financial statistics, and historical tabulation of supply and disposal of electric energy	1.00
57-203	Electricity Bills for Domestic, Commercial and Small Power Service. Approx. 15pp. Includes an annual index of electricity bills for domestic service and bills for light and power in cities and representative municipalities50
57-204	Electric Power Statistics, Vol. I - Annual Electric Power Survey of Capability and Load. Approx. 45pp. Current and projected data of capability and load of major producers of electric energy in Canada75
	Monthly	
57-001	Electric Power Statistics. Approx. 8pp. Production by utilities and industrial establishments, imports and exports, power made available for use in Canada, secondary energy used, sales to ultimate customers by rate category, cumulative monthly totals for year to date, by province .. 10¢ a copy; per year,	1.00
	Occasional	
57-503	Electric Power Statistics. Vol III - Inventory of Prime Mover and Electric Generating Equipment. A list of generating plants in Canada by ownership showing the location, year of installation, name-plate rating and other details of each unit, as at December 31, 1966	1.50
	Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution, Dominion Bureau of Statistics, Ottawa, or to the Queen's Printer, Hull, P.Q.

CHARTS

A. Total Generating Capability within Canada	9
This chart graphically portrays the rapid growth in ability to produce power and shows the extent to which thermal generation is becoming increasingly important.	
B. Net Capability and Peak Loads within Canada	10
This chart provides an indication of the reserves available to meet firm demand for electric power within Canada.	
C. Net Generating Capability within Provinces	11
This chart illustrates the growth in capability and the comparative importance of hydro and thermal generation within provinces.	
D. Net Capability and Firm Demand within Provinces	13
This chart provides a graphic indication of the year to year ability of each of the provinces to meet its firm demand for electric power.	
E. Firm Energy Requirement within Canada	15
This chart shows the growth in Canadian firm energy requirement during the period 1957-1972.	

TABLES

1. <u>Capability, Firm Power Peak Load and Energy Requirements</u>	16
This table summarizes capability, firm power peak load, indicated reserve, generation, interprovincial receipts and deliveries, secondary energy and firm energy requirements.	
2. <u>Total Net Generating Capability within Provinces</u>	42
This table compares provincial rates of growth in net generating capability.	
3. <u>Firm Power Peak Load within Provinces</u>	43
This table compares rates of growth of firm power peak load within provinces.	
4. <u>Firm Energy Requirement within Provinces</u>	44
This table compares rates of growth of firm energy requirement within provinces.	
5. <u>Indicated Reserve</u>	45
This table shows the relationship between the demand for power and the ability to meet it in each of the provinces and in Canada as a whole.

- Nil or zero.

INTRODUCTION

This report presents the results of the Annual Electric Power Survey of Capability and Load which was conducted in March 1968. The survey covers all producers of electric energy in Canada which generate 10 million kwh. or more per annum. This report, therefore, covers the same group of firms which provide the statistics for the monthly "Electric Power Statistics" report (catalogue No. 57-001). The report is organized in such a manner that there is a direct comparison and link with the monthly "Electric Power Statistics" in that the generation figures are common to the two publications: Any differences are due to late revisions.

There are approximately 150 responding firms in the group, about half of which are utilities and half industrial establishments. The combined group accounts for 99.5 per cent of all generation, and all the imports and exports. The utilities group contributes approximately 80 per cent of the generation to the Canada total.

The survey is carried out in co-operation with the Canadian Electrical Association. Area representatives of the Association collect and edit the returns, which are forwarded to the Dominion Bureau of Statistics for final revision, editing, and compilation. The assistance received from the Canadian Electrical Association and its members has been invaluable.

1967 CAPABILITY AND LOAD SURVEY

Review of Survey Results

Total net generating capability in 1967 for firms which generate over 10 million kwh. per year increased 2,437,000 Kw. or 8.42 per cent to 31,370,000 Kw. The forecast years 1967-72 indicate an anticipated growth of 16,780,000 Kw. to 48,150,000 Kw., a compound growth rate of 8.95 per cent as compared with the 1957-1967 growth rate of 6.66 per cent. Thermal capability is expected to grow at an annual rate of 13.49 per cent in the forecast period compared with an actual rate of 14.46 per cent in the previous ten year period, while hydro-electric capability is expected to increase at 6.89 per cent compared with 4.73 per cent in the previous ten years. Seventy-eight per cent of the thermal capability growth will be in fossil-fuelled steam plants, nineteen per cent in nuclear-fuelled steam plants and three per cent in gas turbine plants.

The first nuclear capability was put into service in 1967. The nuclear capability does not include the 20,000 Kw. plant at Rolphton, Ontario, which is an experimental plant and therefore is not considered part of the capability. However, energy generated in this plant has been fed into the system and is included in Table 1. It is expected that by 1972 the nuclear capability will reach 1,700,000 Kw. or 3.53 per cent of the total Canadian generating capability.

In the previous forecast it was estimated that the net generating capability in 1967 would be 32,444,000 Kw. The actual net generating capability fell short of this estimate by 1,074,000 Kw. This was caused by the delay of the installation of some units until 1968 and by some units being put into service too late to be considered part of the generating capability at the time of the firm power peak load. The 1967 capability was significantly below the previous forecast for New Brunswick and Ontario.

The largest absolute growths in generating capability for the forecast period are indicated for: Ontario 6,283,000 Kw.; Quebec 3,275,000 Kw.; Newfoundland 2,056,000 Kw. and British Columbia 1,973,000 Kw. Of the increased generating capability in Ontario, 3,779,000 Kw. will be in fossil-fuelled plants, (steam, internal combustion and gas turbine) while nuclear-fuelled steam plants will account for 1,533,000 Kw. of the increase. Quebec plans to increase its capability by adding 3,090,000 Kw. hydro and 180,000 Kw. in fossil-fuelled steam plants. The Newfoundland forecast is for an increase of 1,652,000 Kw. in hydro capability and 404,000 Kw. in thermal capability, while British Columbia estimates are for increases of 1,790,000 Kw. and 183,000 Kw. in hydro and thermal capability respectively.

In the period from 1957 to 1967 the compound growth rate of firm power peak load in Canada was 6.66 per cent. This growth rate is expected to increase to 7.02 per cent during the period 1967 to 1972. During the forecast period the indicated reserve is expected to increase from 3,507,000 Kw. in 1967 to 8,826,000 Kw. in 1972. The indicated reserve, stated as a percentage of firm power peak load, amounted to 12.5 per cent in 1967 and it is forecast that it will be 22.4 per cent in 1972.

Firm energy requirements increased 7.24 per cent from 151,653 million Kwh. in 1966 to 162,629 million Kwh. in 1967 compared with a compound growth rate of 6.79 per cent in the previous ten year period and a forecast growth rate of 7.15 per cent for the period 1967-1972. The additional firm energy requirement in 1967 was supplied by an increase in net generation of 7,630 million Kwh. a decrease in net exports of 1,529 million Kwh. and a decrease of 1,817 million Kwh. secondary energy delivered within Canada.

Concepts and Definitions

Table 1. Capability, Firm Power Peak Load and Energy Requirements:

The generating capability and firm power peak load concepts are virtually unchanged from previous reports. Generating capability measures the expected power of all available generating facilities of the province (or nation) at the time of one-hour firm peak load for each of the respondents. This may differ from the generating capacity as measured by the name plate rating of the equipment and published in the "Prime Mover and Electric Generating Equipment" report.

The variations between generating capability and generating capacity may be caused by high water in reservoirs resulting in a higher water head and greater generation than the name plate capacity; the impossibility of placing all pieces of equipment on the line at the same time, low water, ice, or some equipment being considered unreliable, thereby resulting in generation below capacity.

All figures in Table 1 of the report are calculated at the time of the one-hour peak load for each of the respondents. As a result, capability and peak loads are non-coincident (the arithmetic sum of the actual peak loads regardless of time of occurrence) and may be equal to, or greater than, the coincident peak load for each of the provinces. Insofar as the utilities have about 80 per cent of the load of the nation and most of the peak loads occur in December, the variation from the coincident peak will not be too great. Two major systems which account for about 50 per cent of the capability have only a slight variation between their coincident and non-coincident peak loads. Of thirty major systems serving Canada, three had peak loads on December 18, thirteen on other dates between November 30 and December 31 and fourteen outside this period.

Receipts and deliveries of firm power used in calculating net capability are the interprovincial and international transfers of power under firm contracts, or the best estimate of firm obligations possible in the absence of contracts. The actual receipts and deliveries of firm and secondary power are taken into account in the calculation of firm power peak loads.

Peak loads are the total demands within a province after all inter-changes have been taken into account to remove any duplication. The peak loads include all electricity consumed by ultimate customers, line losses, and manufacturing plants own consumption, but do not include generating station service which is deducted before arriving at generating capability. Firm power peak loads exclude the secondary or surplus power used by ultimate customers on an interruptible basis, as these are not firm obligations.

Indicated shortages (line 15, Table 1) are a measure of the firm power commitments that a system was not able to meet at the time of its peak load.

The indicated power reserve of a province (shown in Table 1) is the reserve after all firm obligations and shortages have been met or received. It is the difference between net capability and total firm peak load within the province or gross capability less firm power peak load on the province, and is a measure of the industries' ability to satisfy demands of a province and meet contingencies. Since not all systems are fully interconnected, the reserves of power shown cannot always be fully utilized.

Net generation figures which are identical with the figures presented in the monthly "Electric Power Statistics" report (or revisions thereof) are exclusive of station service. No forecasts of generation are given for 1968-72.

Firm energy receipts and deliveries are the actual receipts and deliveries under firm contracts or obligations.

Secondary energy delivered within the province is the surplus energy sold at time of low demand and when surplus generating capability is available. This energy may be interrupted at any time and, consequently, sells at very low rates, generally for use in electric boilers.

Firm energy available is the measure of primary demands of electric energy, including residential, commercial and power sales, and all line losses after deducting net exports. It is an important economic indicator and, as such, is of major importance in forecasting.

Indicated shortage (line 36, Table 1) is an estimate of the total quantity of energy a system was unable to deliver due to its inability to meet firm power commitments during the year; no shortages have occurred since 1957.

Firm energy requirements are a measure of the needs for electric energy that have been or can be met (firm energy available) and those that cannot be serviced (shortage).

GLOSSARY OF TERMS

Firm Energy Requirement

Energy required to meet firm obligations, or for use in own industrial plant other than secondary energy.

Firm Power

Maximum power always to be available, short of major outages caused by storm, explosion, strikes, etc.

Firm Power Peak Load

The annual Firm Power maximum average net kilowatt load of one hour duration within the Utility, System or Industrial Establishment.

Firm Obligations

Shall include only maximum commitments under contract agreements to accept or deliver power on an irrevocable basis or the best estimate of firm obligations in the absence of contracts.

Indicated Demand

The sum of firm power peak load and indicated shortage.

Indicated Reserve

Net capability less indicated firm power peak load within the province or gross capability less firm power peak load on the province.

Industrial Establishment

A firm which generates power primarily for use in its own plants.

Net Generating Capability

The maximum net kilowatt output (after station service) available from the generating facilities of the Utility, System or Industrial Establishment with all equipment available, at the time of the annual Firm Power Peak Load, determined as the average kilowatt output for one hour with no allowance for outages of generating units.

Net Capability

The sum of net generating capability and purchases of firm power under firm obligation from other utilities less deliveries of firm power under firm obligation to other utilities.

System

Two or more Utilities, Industrial Establishments or a combination of these, having interconnections for the exchange of power, which although they may be separately incorporated, are controlled, managed or operated by one principal.

C.E.A.
ELECTRIC POWER STATISTICS COMMITTEE PERSONNEL
1967-1968

Chairman - A.C. Abbott, Montreal Engineering Co.,
P.O. Box 250 Place d'Armes, Montreal, Que.

Vice-Chairman - N.S. Crerar (N.F. MacFarlane, Alternate), Saguenay Power Co.,
P.O. Box 6090, Montreal, Que.

Policy Subcommittee

- Chairman 1.
2. D.C. Campbell, Canadian Electrical Association, 345 Victoria Ave.,
Room 202, Westmount 6, P.Q.
3. W.D. Fallis, Manitoba Hydro, Box 815, Winnipeg 1, Man.
4. J.M. Hambley, Ontario Hydro, 620 University Ave., Toronto, Ont.
5. L.F. Kirkpatrick, N.S. Power Comm., Halifax, N.S.
6. J.C. Lessard, Hydro-Quebec, 75 Dorchester Blvd. W., Montreal, Que.
7. K.W. McGrail, N.S. Light & Power Co., Box 848, Halifax, N.S.
8. J.H. Steede, B.C. Hydro & Power Authority, 970 Burrard St., Vancouver, B.C.
9. R.E. Tweeddale, N.B. Electric Power Comm., Fredericton, N.B.

Surveys Subcommittee

- Chairman 1. A.C. Abbott, Montreal Engineering Co., Box 250 Place d'Armes, Montreal, Que.
2. V.R. Berlinguette, Dominion Bureau of Statistics, Economic Statistics Branch,
Ottawa, Ont.
3. R.L. Borden, Dominion Bureau of Statistics, Energy & Minerals Section, Ottawa
4. H.O. Bulmer, B.C. Hydro & Power Authority 970 Burrard St., Vancouver 1, B.C.
5. N.B. Cameron, Manitoba Hydro, Box 815, Winnipeg 1, Man.
6. L.J. Cole, Nfld. & Labrador Power Commission, Box 396, St. John's, Nfld.
7. J.P. Comeau, Hydro-Quebec, 75 Dorchester Blvd. W., Montreal, Que.
8. J.R. Hanson, N.B. Electric Power Commission, Fredericton, N.B.
9. W.K. Murray, N.S. Light & Power Co., Halifax, N.S.
10. J.W. Newby, Calgary Power Ltd., Box 1900, Calgary, Alta.
11. W.S. Preston, Ontario Hydro, 620 University Ave., Toronto, Ont.
12. W.A. Reed Saskatchewan Power Corp., Regina, Sask.
13. K.G. Richardson, National Energy Board, Ottawa 4, Ont.

Co-ordinating Panel

- Chairman 1. R.B. Gander, Montreal Engineering Co., Box 250, Place d'Armes, Montreal, Que.
2. R.L. Borden, Dominion Bureau of Statistics, Ottawa, Ont.
3. H.O. Bulmer, B.C. Hydro & Power Authority, 970 Burrard St., Vancouver 1, B.C.
4. N.B. Cameron, Manitoba Hydro, Box 815, Winnipeg 1, Man.
5. J.P. Comeau, Hydro-Quebec, 75 Dorchester Blvd. W., Montreal, Que.
6. G. Cornish, Deputy Manager, City of Calgary, Electric System, 2808 Macleod Trail,
Calgary, Alta.
7. W.K. Murray, N.S. Light & Power Co., Halifax, N.S.
8. W.S. Preston, Ontario Hydro, 620 University Ave., Toronto, Ont.
