Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to: Energy Section, Industry Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (telephone (613) 951-9823) or to the Statistics Canada Regional Reference Centre in:

| | |

Standards of Service to the Public

To maintain quality service to the public, Statistics Canada follows established standards covering statistical products and services, delivery of statistical information, cost-recovered services and service to respondents. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingué et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de la présente publication ou au sujet de statistiques ou de services connexes doit être adressée à: Section de l'énergie, Division de l'industrie, Statistique Canada, Ottawa, Ontario, K1A 0T6 (téléphone: (613) 951-9823) ou à l'un des centres de consultation régionaux de Statistique Canada:

Note of appreciation

Canada owes the success of its statistical system
to a long-standing cooperation involving Statistics
Canada, the citizens of Canada, its businesses,
governments and other institutions. Accurate and
timely statistical information could not be produced
without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada
repose sur un partenariat bien établi entre
Statistique Canada et la population, les entreprises,
les administrations canadiennes et les autres
organismes. Sans cette collaboration et cette bonne
volonté, il serait impossible de produire des
statistiques précises et actuelles.

Introduction

This report presents the results of the 42nd annual Electric Power Statistics Capability and Load Forecast.

The survey is carried out in co-operation with the Canadian Electricity Association (CEA). Representatives of the CEA provide initial data for their area and then meet with Statistics Canada to resolve reporting problems and to perform a final edit before publication. The assistance received from the CEA and its members is gratefully acknowledged.

Data Quality and Methodology

Data for this publication comes from the 1995 Electric Power Capability and Load Forecast. The survey is completed by the electric utility that is responsible for most of the generation, transmission and distribution in the province or territory. The data therefore consists of actual data from the responding electric utility and either actual data or estimates for other electric power producers in the province or territory. If estimates are used, net generating capability is assumed to be 90% of the nameplate rating obtained from the Generating Stations survey, while peak met is estimated at 67% of net generating capability.

Electric energy figures come from the Electricity Supply/Disposition Quarterly survey. Major utility and industrial generators of electricity are surveyed directly, while data for the remainder are estimated. These respondents have approximately 98% of total generating capability and produce 99% of all electricity in Canada. In addition, they account for 100% of imports, exports and inter-provincial movements.

The forecasts provided by the survey respondents are based on the best information available as of April 1st, 1996.

Introduction

On trouvera dans la présente publication les résultats de la 42e édition annuelle de la Prévision de la puissance d'énergie électrique et d'électricité.

L'enquête est menée conjointement avec l'Association canadienne de l'électricité (ACÉ). Les représentants régionaux de l'ACÉ rencontrent annuellement Statistique Canada, afin de résoudre les problèmes de déclaration et d'effectuer une dernière révision avant la publication. La collaboration qui nous est fournie par l'ACÉ et par ses membres est très appréciée.

Méthodologie et qualité des données

Les données de cette publication proviennent de la Prévision de puissance d'énergie électrique et d'électricité de 1995. Cette enquête est remplie par le service public d'électricité qui est responsable de la production, la transmission et la distribution de la majeure partie de l'énergie électrique dans la province ou le territoire. Les données consistent donc de données réelles du service public d'électricité qui remplit l'enquête et de données réelles ou estimées pour les autres producteurs d'énergie électrique de la province ou du territoire. Si des estimations sont faites, la puissance maximale possible de production nette est estimée à 90% de la puissance de production indiquée sur la plaque signalétique, selon l'Enquête sur les centrales électriques, et l'appel maximal satisfait est estimé à 67% de la puissance maximale possible de production nette.

Les chiffres sur l'énergie électrique proviennent de l'Enquête trimestrielle sur l'écoulement et la disponibilité de l'électricité. Les grandes centrales électriques et les établissements industriels produisant de l'électricité sont enquêtés directement. Ces répondants représentent approximativement 98% du total de la puissance maximale possible de production et produise 99% de la production électrique au Canada. En plus, ils représentent 100% des importations, des exportations et des mouvements inter-provinciaux.

Les prévisions obtenues par les répondants de l'enquête sont basées sur la meilleure information disponible au 1er avril 1996.

1995 Electric Power Capability and Load

Review of Survey Results

Total net generating capability in 1995/96 decreased marginally (60 MW) to 106 473 MW. It is the second marginal annual decrease in generating capability after the peak of 106 678 MW reached in 1993/94.

The ten year forecast predicts an increase of 6.3 GW in total net generating capability, achieving a compound growth of 0.6% compared to 1.7 % in the previous ten years.

The indicated peak within Canada decreased 0.3 % in 1995/96. A compound growth of 1.7 % is forecast for the period 1995/96 - 2005/06.

Firm electric energy available within Canada increased 1.9 % from 491 806 GW.h in 1994 to 501 325 GW.h in 1995. The compound growth rate was 2.4% in the previous 10 year period.

It should be noted that the energy data reported are not affected by the peak load capability and therefore these data may be considered a better measure of the growth of the electric power industry.

Notes:

Canada - Since the movements of power over a province's borders are measured at the time of the province's peak (see Concepts and Definition), receipts and deliveries do not balance. For this reason, Canada level data omit both interprovincial movements of power and the losses associated with these movements. As a consequence, although Canada data balances in an arithmetic sense, lines 12, 15, 22, 26, 43 and 47 are not the sum of provincial figures.

Further, due to timing, transmission limitations, etc., data for reserves are not appropriate.

Puissance maximale et charge des réseaux d'énergie électrique 1995

Revue des résultats de l'enquête

En 1995/96, la puissance maximale de production nette a diminué un peu (60 MW) pour totaliser 106 473 MW. Ceci est la deuxième année consécutive avec une baisse marginale de la puissance maximale depuis le sommet de 106 678 MW atteint en 1993/94.

Les prévisions pour les dix prochaines années représentent un accroissement de 6,3 GW de la puissance maximale de production nette; soit un taux de croissance composé de 0,6 % contre 1,7 % pour les dix années précédentes.

L'appel maximal indiqué au Canada a diminué de 0,3 % en 1995/96. On prévoit un taux de croissance composé de 1,7 % pour la période 1995/96 - 2005/06.

L'énergie électrique garantie disponible, souscrite au Canada, a augmenté de 491 806 GW.h en 1994 à 501 325 GW.h en 1995, soit de 1,9 %. Le taux d'accroissement composé s'est établi à 2,4 % au cours des 10 dernières années.

On remarquera que l'appel maximal ne change rien aux données déclarées sur l'énergie et, par conséquent, ces données peuvent être considérées comme une image plus fiable de la croissance observée dans l'industrie de l'énergie électrique.

Notes:

Canada - Puisque les mouvements d'énergie hors des limites territoriales d'une province est mesuré lors de l'appel maximal de puissance (voir concepts et définitions), les réceptions ne concordent pas avec les livraisons. Pour cette raison, les données au niveau du Canada ne comprennent pas les mouvements inter provinciaux. Par conséquent, même si les données au niveau du Canada concordent au point de vue arithmétique, les lignes 12, 15, 22, 26, 43 et 47 ne sont pas la somme des données provinciales.

En plus, à cause de la synchronisation, des limites de transmission, etc., les données concernant les réserves ne sont pas appropriées.

Concepts and Definitions

Prior to 1980, respondents reported capability and load data relating to their calendar year peak. Since 1980 respondents have reported for the day of the peak for the largest electric utility in the province or territory. In 1987 calendar year peak was replaced by winter peak (Nov.-Feb.).

The change was made in an effort to eliminate exaggerated changes in peak which resulted solely from the vagaries of weather i.e. very cold in November-December as opposed to January-February. In addition, as most forecasts are made on the assumption of a winter peak, current and forecast data are now collected on the same basis.

All data for energy are on a calendar year basis.

The days chosen for the winter 1995-1996 were as follows:

| | |
|-------------------------|-------------|
| Newfoundland - Labrador | January 9 |
| - Island | January 16 |
| Prince Edward Island | December 18 |
| Nova Scotia | December 12 |
| New Brunswick | February 5 |
| Quebec | January 5 |
| Ontario | December 11 |
| Manitoba | February 1 |
| Saskatchewan | February 1 |
| Alberta | December 12 |
| British Columbia | January 29 |
| Yukon | December 6 |
| Northwest Territories | December 6 |

Concepts et définitions

Avant 1980, chaque répondant rapportait la puissance maximale et la charge des réseaux selon leur propre journée d'appel maximal, et ce à l'intérieur de l'année civile. Depuis 1980, cette journée est déterminée par la journée d'appel maximal du plus important service public d'électricité de la province ou du territoire. En 1987 la puissance maximale d'après l'année civile fut remplacée par la puissance maximale en hiver (Nov.-Fév.).

Le changement eu lieu par souci d'éliminer les fluctuations exagérées dans l'appel maximal résultant uniquement des fantaisies de la nature c.-à.-d. très froid en novembre et décembre au lieu de janvier et février. En plus, comme toutes les prévisions sont faites présumant un appel maximal en hiver, les données présentes et futures sont sur la même base.

Toutes les données pour l'énergie sont sur la base de l'année civile.

Les jours choisis pour l'hiver 1995-1996 sont:

| | |
|---------------------------|-------------|
| Terre-Neuve - Labrador | 9 janvier |
| - Île | 16 janvier |
| Île-du-Prince-Édouard | 18 décembre |
| Nouvelle-Écosse | 12 décembre |
| Nouveau-Brunswick | 5 février |
| Québec | 5 janvier |
| Ontario | 11 décembre |
| Manitoba | 1er février |
| Saskatchewan | 1er février |
| Alberta | 12 décembre |
| Colombie-Britannique | 29 janvier |
| Yukon | 6 décembre |
| Territoires du Nord-Ouest | 6 décembre |

Other generating capability and firm power peak load concepts are unchanged from previous reports. Generating capability measures the expected power of all available generating facilities of the province or territory at the time of one hour firm peak load for each province or territory. This may differ from the generating capacity as measured by the name plate rating.

The variations between generating capability and generating capacity may be caused by high water levels in reservoirs resulting in a higher water head and greater generation than the name plate capacity, the impossibility of placing all pieces of equipment on the line at the same time, low water levels, ice, or some equipment being considered unreliable, thereby resulting in capability below capacity.

The published peak for Canada is non-coincident (the arithmetic-sum of the provincial peaks regardless of time of occurrence) and must be equal to, or greater than, the coincident peak load.

Receipts and deliveries of firm power used in calculating net capability are the interprovincial and international transfers of power under firm contracts, or the best estimate of firm obligations. The actual receipts and deliveries of firm and non-firm power are taken into account in the calculation of the firm power peak load.

Peak loads are the total demands within a province or territory after all interchanges have been taken into account to remove any duplication. The peak loads include all power consumed by ultimate customers, line losses and manufacturing plants' own consumption, but do not include generating station service which is deducted before arriving at generating capability.

Firm load not met measures the commitments that a system could not or would not meet at the time of its peak load.

Les autres notions de puissance maximale de production et d'appel maximal de puissance souscrite sont les mêmes que dans les rapports antérieurs. La puissance maximale de production indique le maximum de puissance réalisable par les centrales électriques dans chaque province ou territoire durant l'heure de l'appel maximal annuel de puissance pour chaque province ou territoire. Elle ne correspond pas nécessairement à la puissance installée des centrales.

Les écarts entre la puissance maximale de production et la puissance installée peuvent résulter du niveau d'eau dans les réservoirs qui, par une hauteur de chute plus ou moins élevée, porterait la puissance de production au-dessus ou au-dessous de la puissance indiquée sur les plaques signalétiques. Une production inférieure à la puissance utilisée peut aussi être causé par l'impossibilité d'utiliser tout le matériel simultanément, la formation de glace ou la présence d'une pièce douteuse d'équipement.

L'appel maximal de puissance publié au niveau du Canada est non-coincident (i.e., la somme arithmétique des pointes provinciales sans égard à la journée d'observation) et doit égaler ou être supérieur à l'appel maximal coïncident.

Les réceptions et les livraisons de puissance souscrite, qui ont servi à établir la puissance maximale nette, représentent les échanges inter provinciaux et internationaux de puissance faits en vertu de contrats formels ou, en l'absence de contrats, la meilleure estimation possible. On tient compte des réceptions et des livraisons réelles de puissance souscrite et de puissance non souscrite dans le calcul des appels maximaux de puissance souscrite.

L'appel maximal de puissance correspond à la puissance globale fournie dans la province ou territoire, compte tenu des échanges de puissance de façon à éviter toute duplication. Il comprend la puissance fournie aux abonnés ultimes de l'entreprise productrice, celle utilisée par les propres installations de cette dernière, de même que les pertes de transmission, mais exclut la puissance employée pour les besoins internes de la centrale génératrice (qui est soustraite avant le calcul de la puissance maximale possible de production de la centrale).

L'appel maximal souscrit non satisfait mesure l'engagement qu'un réseau n'a pu ou n'a pas voulu satisfaire au moment de son appel maximal de puissance.

Losses - external deliveries represent the amount of power and energy required to meet out of province commitments. Exports and interprovincial deliveries are measured at the border but, in some cases, power and energy are used for delivery to the border. These are subtracted as they do not represent internal use and, therefore, distort provincial growth rates.

The **reserve** of a province or territory is the reserve after all obligations have been taken into account whether or not these obligations have been met. It is a measure of the industry's ability to satisfy demands of a province and meet contingencies. Since not all systems are fully interconnected, the reserves of power shown cannot always be fully utilized. However, with the development of interconnections, an increased sharing of capability is possible, particularly when provincial peaks occur at different times. To this extent the reserves reported in this publication may be understated.

It should be further noted that **firm load curtailable** represents power which the supplying utility intends to furnish to customers contracted under firm load curtailable agreements, except under the most extraordinary conditions. Thus, this curtailable power could be considered part of the utility's reserve when such extreme conditions apply.

Pertes - les livraisons hors province représentent le montant de puissance et d'énergie requis pour satisfaire les engagements hors province. Les exportations et les livraisons interprovinciales sont mesurées à la frontière, mais dans certains cas, la puissance et l'énergie sont utilisées pour la livraison à la frontière. Ceux-ci sont soustraits, car ils ne représentent pas l'utilisation interne et, par conséquent, déforment le taux de croissance provincial.

La **réserve** d'une province ou territoire est l'excédent disponible de puissance lorsque tous les engagements ont été comptabilisé, qu'ils aient été satisfaits ou non. Elle indique dans quelle mesure les réseaux peuvent faire face aux demandes de la province ainsi qu'aux imprévus. Comme les réseaux ne sont pas tous complètement interconnectés, les réserves de puissance ne peuvent pas toujours être entièrement utilisées. Cependant, avec le développement des interconnections, une augmentation du partage de la puissance maximale est possible, particulièrement quand l'appel maximal de puissance des provinces arrive à des temps différents. Alors, les réserves rapportées dans cette publication peuvent être sous-évaluées.

Il convient en plus de souligner que l'**appel maximal garanti réductible** représente la puissance que la centrale qui approvisionne compte fournir aux clients qui possèdent un contrat d'entente d'appel maximal garanti réductible, excepté sous des conditions extraordinaires. Alors, ce pouvoir réductible pourrait être considéré comme faisant partie de la réserve de la centrale, quand ces conditions extrêmes s'appliquent.

Don't let the changing world take you by surprise!

An aging population. Lone-parent families. A diverse labour force. Do you know how today's social changes will affect your future ... your organization ... and your family?

Keep pace with the dramatic shifts in Canada's evolving social fabric with Statistic Canada's best-selling quarterly, *Canadian Social Trends*. With vast and varied reports on major changes in key social issues and trends, this periodical incorporates findings from over 50 national surveys.

Written by some of Canada's leading-edge social analysts, *Canadian Social Trends* combines painstaking research with dynamic prose on topics like ethnic diversity, low-income families, time-crunch stress, violent crime and much more — all in a colourful, easy-to-read, magazine format.

A lasting record of changing times!

Join the thousands of business and policy analysts, social-science professionals, and academics who trust *Canadian Social Trends* to demystify the causes and consequences of change in Canadian society. Don't miss a single issue — subscribe today.

Canadian Social Trends (catalogue number 11-0080XPE) is \$34 (plus GST and applicable PST) annually in Canada, US\$41 in the United States and US\$48 in other countries.

To order, write to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Ave., Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Reference Centre listed in this publication.

If more convenient, fax your order to 1-613-951-1584 or call toll-free 1-800-267-6677 and use your VISA or MasterCard. Via Internet: order@statcan.ca

Ne soyez pas dépassé par les événements!

Le vieillissement de la population. Les familles monoparentales. La diversification de la population active. Savez-vous comment les changements sociaux d'aujourd'hui vont se répercuter sur votre avenir, votre organisation, votre famille?

Suivez l'évolution spectaculaire de la société canadienne grâce à *Tendances sociales canadiennes*, une publication trimestrielle de Statistique Canada. Avec des articles vastes et variés sur les principaux changements caractérisant les questions et les tendances sociales principales, cette publication intègre les résultats de plus de 50 enquêtes nationales.

Certains des analystes sociaux les plus reconnus du Canada rédigent des articles dans *Tendances sociales canadiennes*. Ils présentent les résultats de recherches minutieuses dans un style attrayant pour des sujets tels que la diversité ethnique, les familles à faible revenu, le stress dû au manque de temps, le crime et bien d'autres encore dans une revue haute en couleur et de lecture aisée.

Un dossier permanent d'une époque en évolution!

Des milliers d'analystes des entreprises et des politiques, de professionnels des sciences sociales et d'universitaires lisent *Tendances sociales canadiennes* pour identifier les causes et les conséquences de l'évolution de la société canadienne. Ne manquez pas un numéro, abonnez-vous dès aujourd'hui.

L'abonnement annuel à *Tendances sociales canadiennes* (n° 11-0080XPF au catalogue) coûte 34 \$ (plus la TPS et la TVP en vigueur) au Canada, 41 \$ US aux États-Unis et 48 \$ US dans les autres pays.

Pour passer votre commande, écrivez à Statistique Canada, Division des Opérations et de l'intégration, Direction de la circulation, 120, av. Parkdale, Ottawa (Ontario) K1A 0T6, ou adressez-vous au centre de services-conseils de Statistique Canada le plus proche de chez vous et dont la liste figure dans cette publication.

Vous pouvez aussi envoyer votre commande par télecopieur, au 1-613-951-1584, ou téléphoner sans frais au 1-800-267-6677 et donner votre numéro de carte VISA ou MasterCard. Via l'Internet: order@statcan.ca

Canada: A Portrait

A Memorable Journey Through Canada

A book to captivate everyone, *Canada: A Portrait* is a compelling record in words and pictures of the excitement and diversity of present-day Canada. This all-new edition of Statistics Canada's proven bestseller features a striking full-colour dustjacket reproduction of Sweetgrass, the rich impressionistic painting by Canadian artist Frank Mayrs. Once you open its appealing cover, you will discover that *Canada: A Portrait* not only delights the eye, it stimulates the imagination. Each page is brimming with lively and intriguing facts, bringing to life the personality and charisma of Canada in a clear, easy-to-read and entertaining narrative.

From the important to the whimsical...

Canada: A Portrait presents you with the perfect opportunity to explore Canada at your leisure with just the turn of a page. Investigate the diverse regions of Canada from Mount Logan in the Yukon to the St. John River in New Brunswick. Delve into the heartbeat of Canada's society: Who are we? Where do we live? What do we believe in? See how the economy is evolving and what makes it tick. Learn about the activities enjoyed by today's Canadians, such as opera and hockey and home computers. *Canada: A Portrait* offers a complete examination of this unique country and reflects many interesting perspectives.

The Land, The People, The Society, Arts and Leisure, The Economy and Canada in the World

Six chapters provide a guided tour of both the physical and the human landscape of Canada. Each chapter is enriched with personal insights on "being Canadian," shared with you by such eminent people as Myriam Bédard, Gerhard Herzberg and Joe Schlesinger and is adorned with a gallery of imaginative pictorial images.

Share the *Canada: A Portrait* experience with your family, friends and colleagues

Its charming format, rich design, intriguing content and attractive price make this a keepsake volume, ideal both to give and to receive.

Canada: A Portrait is available for only \$39.95 in Canada (plus GST, applicable PST and shipping and handling), US \$51.95 in the United States and US \$59.95 in other countries. To order, write to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication. Call toll-free: 1-800-700-1033 and use your Visa and MasterCard or fax your order to (613) 951-1584.

Un portrait du Canada

Un voyage mémorable à travers le Canada

Un portrait du Canada captivera tout le monde. C'est un recueil irrésistible, en mots et en images, de tout ce qui fait le dynamisme et la diversité du Canada d'aujourd'hui. Cette nouvelle édition de l'indiscutable best-seller de Statistique Canada offre, sur la jaquette, un magnifique paysage impressionniste, intitulé Sweetgrass, de l'artiste canadien Frank Mayrs. Dès la première page, vous serez fasciné par la beauté des images et du texte et vous laisserez vagabonder votre imagination. Chaque page regorge de faits vivants et intrigants donnant vie au caractère et au magnétisme du Canada dans une langue claire, simple et prenante.

De l'important au fantaisiste...

Un portrait du Canada vous permet de visiter le pays durant vos moments libres simplement en tournant les pages. Du mont Logan (Yukon) à la rivière Saint-Jean (Nouveau-Brunswick), tâchez le pouls des différentes régions du Canada. Fouillez au cœur même de la société canadienne : Qui sommes-nous? Où vivons-nous? Quelles sont nos croyances? Voyez comment l'économie évolue et pourquoi elle tourne. Découvrez les activités préférées des Canadiens d'aujourd'hui : de l'opéra au hockey jusqu'à l'ordinateur familial. *Un portrait du Canada* offre un examen complet de ce pays unique reflétant des perspectives intéressantes.

Le territoire, La population, La société, Les arts et les loisirs, L'économie et Le Canada dans le monde

Un tour guidé du paysage physique et humain du Canada vous est offert en six chapitres, chacun est parsemé d'oeuvres pleines d'imagination et est enrichi d'un message personnel sur le fait «d'être Canadien». Ces messages sont partagés par d'éminents Canadiens tels que Myriam Bédard, Gerhard Herzberg et Joe Schlesinger.

Partagez cette expérience avec votre famille, vos amis et vos collègues

Son format attrayant, son design riche, son contenu intrigant et son prix abordable font d'*Un portrait du Canada* un cadeau idéal à donner ou à recevoir.

Un portrait du Canada est en vente à seulement 39.95 \$ au Canada (PPS, TVQ et frais de port et de manutention applicables en sus), 51.95 \$ US aux États-Unis et 59.95 \$ US dans les autres pays. Pour commander, écrivez à Statistique Canada, Division des opérations et de l'intégration, Direction de la circulation, 120, avenue Parkdale, Ottawa (Ontario) K1A 0T6 ou communiquez avec le Centre de consultation régional de Statistique Canada le plus près (la liste figure dans la présente publication). Ou encore, téléphonez sans frais au 1-800-700-1033 et portez les frais à votre compte VISA ou MasterCard ou télécopiez votre commande au (613) 951-1584.
