INDEX OF INDUSTRIAL PRODUCTION $(1949=100)$

$$
\text { AUGUST } 1964
$$

The seasonally adjusted index of industrial production showed a gain of 1.8 per cent in August.

NOTE: This issue includes indexes of non-agricultural real output for the latest available quarter (2nd qtr. 1964).

Industrial Output Section
National Accounts and Balance of Payments Division
October 1964 2205-502

The seasonally adjusted monthly Index of Industrial Production showed a gain of $1.8 \%$ in August, reaching a level of 214.6 in the month. This left the index at virtually the same level as in April of this year and almost $2 \%$ higher than at the beginning of 1964.

In August, all the strength occurred in manufacturing, where output advanced by more than two and one-half per cent. Both durables and non-durables moved higher in the month, the former by more than $3 \%$, the latter by almost $2 \%$. On the other hand, both mining and electric power and gas utilities showed relatively small declines of $1 \%$ or less in August.

Increases in major groups were quite widespread throughout non-durables, ranging from $1 \%$ in petroleum products and foods and beverages to $10 \%$ in tobacco products. Rubber products gained about $7 \%$ in the month and chemicals, with almost all components contributing substantially, were up by $6 \%$. In addition, leather products advanced by $4 \%$, and $2 \%$ increases were recorded in textiles and paper products, the latter due largely to higher pulp and paper output. Only clothing and printing and publishing registered declines in the month.

The strength in durables in August was similarly widespread and substantial. The biggest single contributor was transportation equipment, where motor vehicles moved higher by more than $10 \%$. In addition, wood products, with considerably higher sawmill and veneer and plywood output. gained $10 \%$. Increases of about $3 \%$ in both primary iron and steel and iron castings led the way to a $2 \%$ advance in iron and steel products. In line with other increases in some of the building materialsproducing industries, non-metallic mineral products jumped by $5 \%$, due mostly to concrete products. A gain of $4 \%$ was also recorded in electrical apparatus and supplies as both telecommuncation equipment and refrigerators and appliances showed strength in the month.

The slight decline in mining production originated in both fuels ( $-2 \%$ ) and non-metals $(-7 \%)$. These were almost offset by a $3 \%$ gain in metals, with all the major metals excepting nickel moving higher.

## NOTES

1. For a detailed description of concepts, sources and methods, see D.B.S. Catalogue No 61-502, "Revised Index of Industrial Production". For a complete and continuous record of total industrial production along with component industry indexes on both a seasonally unadjusted and adjusted basis use D.B.S. Reference Paper 61-502 for the period 1935 to 1956 inclusive, the March 1963 supplement to this report for the period 1919 to 1934 , the March 1964 supplement for the period 1957 to 1963 inclusive and the regular monthly reports thereafter.
2. An explanation of the discontinuity in the total Clothing index is contained in the March 1964 issue of this report, page 2 , note 2.
3. It should be noted that the 1949 weights shown in Table 1 have been re-expressed as proportions of total Gross Domestic Product rather than of Industrial Production alone. Thus, the Index of Industrial Production represents $32.231 \%$ of total real output.
4. The figures in Tabies 1 and 2 may not reconcile with those on the Index of Industrial Production in Table 3 because of small revisions in June which have not been incorporated in the latter Table.

## Note to Users

The indexes of real domestic product at factor cost (the sum of the unduplicated output of all industries located in Canada) are an extension of the "Index of Industrial Production" to cover the whole range of domestic industries. In addition to mining, manufacturing and electric power and gas utilities, total domestic product includes the following industry groups; agriculture; forestry; fishing and trapping; construction; transportation, storage and commuication; trade; finance, insurance and real estate; public administration and defence; and commuity, recreation, business and personal service.

The real domestic product indexes are also an elaboration of the supply side of the National Accounts. Total domestic product differs conceptually from constant dollar expenditure on Gross National Product by (1) the inclusion of income paid to non-residents (2) the exclusion of income received from non-residents, and (3) the exclusion of "indirect taxes less subsidies". In addition, of course, statistical differences may exist between these two measures of aggregate production.

The real output indexes in Table 3 serve to bring up to date the historical record of production in Canada published in DBS Occassional Paper 61-505, "Indexes of Real Domestic Product by Industry of Origin, 1935-61". This reference paper contains a detailed description of concepts and methods used as well as other relevant material.

The monthly "Index of Industrial Production" publication 61-005 will henceforth contain quarterly indexes of real domestic product, less agriculture, with component industry detall. Quarterly indexes for agriculture and for aggregate domestic production will not be available, except on a once-a-year basis; they will appear in the annual supplement to this report each spring.

Seasonally adjusted real domestic product less agriculture for the seconc traven af ichat was one per cent below the level attained in the first quarter of this year. The present quarterly (i) decline is the first to be shown since the beginning of the current expansion in production early in 1961. It should be noted, however, that the decline represented to a large extent a reversal of the sharp increases shown by construction and related industries during the preceding months and particularly during the first quarter. Compared with the first six months of 1963, non-agricultural output was over 7 per cent higher. The following table shows a comparison of percentage contributions of some major industry groupings to the change in non-agricultural output (as measured from the trough in production) for the last five quarters.

TABLE 1

The 11 per cent drop in construction in the second quarter accounted for about 80 per cent of the decline in total non-agricultural output. Stimulated in part by the government winter housebuilding incentive programme and the pending imposition of the second stage of the tax on building materials on April 1, construction activity had increased by 6 per cent in the fourth quarter of 1963 and by a further 9 per cent in the first quarter of 1964. The current decline left construction at 3 per cent above the third quarter of 1963. It was concentrated in the area of residential construction which alone accounted for more than one half of the decline in non-agricultural output. It should be noted that while there was a sharp drop in the construction of single and semi-detached dwelling unfts, the drop in construction activity on multi-unft dwellings from an exceptionally high first quarter level also contributed substantially to the decrease in residential construction.

The next largest contributor to the decline was trade, with wholesale trade down by $21 / 2$ per cent and retail trade by $1 / 2$ per cent. Both at the retall and wholesale levels the most significant declines took place in the trades dealing with construction materials, such as the 27 per cent decline in lumber and building material dealer sales, which accounted for over one half of the decline in retall trade; and the 20 per cent declines in construction materials and supplies and in industrial and transportation equipment dealers which contributed heavily to the decline in wholesale trade.
(1) The monthly Index of Industrial Production showed little change in the second quarter, in spite of the fact that the April level was a record high. In June, the Index was 1.6 per cent below the April level and only marginally higher than January. For an analysis of monthly movements see page 2 of this report.

Other declines occurred in mining, forestry, and fishing and trapping. Pubilc administration and defence declined fractionally. Mining output decreased by almost one per cent, with declines concentrated in metal mining, particularly iron ore ( $-7 \%$ ) and other metals (including uranium). The 9 per cent drop in the irregularly fluctuating forestry industry contributed more than one sixth of the decrease in non-agricultural output, thus exercising more than its usual influence on the total change.

Manufacturing showed a marginal increase, as a result of a one per cent increase in non-durables just outweighing a 0.6 per cent decline in durables. As in trade, the largest declines in durables occurred in industries which produce construction materials and related goods, such as the wood products and non-metallic mineral products groups which declined by 4 and 6 per cent respectively and together accounted for over one half of the decline in durables. The remainder was mostly accounted for by the 6 per cent decline in the motor vehicle component of the transportation equipment group. This was the first quarterly decline recorded by this industry since the beginning of its current period of expansion early in 1961, during the course of which its output has more than doubled. Iron and steel production in the second quarter continued to increase, showing a gain of 2 per cent, with increases in iron castings and primary fron and steel of 11 and 3 per cent respectively. Non-ferrous metal products increased by $31 / 2$ per cent as a result of a $41 / 2$ per cent increase in smelting and refining and smaller gains in some other components. Electrical apparatus and supplies also expanded, the larger portion of the gain coming from a 6 per cent increase in refrigerators and appliances.

Within non-durable manufacturing, strong gains of 2 to 9 per cent were shown by petroleum products, textile products, printing and publishing and tobacco products, the increase in the last group representing in part a recovery from a very low first quarter. Paper products increased by less than one per cent, with the effects of a 3 per cent gain in pulp and paper dampened by the sharp decline of the roofing paper component from the exceptionally high first quarter levels. Foods and beverages declined by 1 per cent, with a drop in its grain milling component of 5 per cent, again from very high first quarter levels, reflecting in the main developments associated with the export of grain and flour. A fractional decline occurred in chemicals, as a result of a large drop in paints and varnishes, while most other components of chemicals increased.

The transportation, storage and communication group showed a gain of one and a half per cent in the second quarter, with all three components contributing to the increase. Storage was up by 9 $1 / 2$ per cent as a result of increased receipts and shipments at grain elevators. The transportation group increased by one per cent in spite of the two per cent decline in its largest component, railways, which failed to sustain the rapld increases achieved during the previous two quarters when rail facilities were increasingly being used to transport grain. The expansion in transportation activity for the second quarter came largely from shipping, which showed an above average gain due to the large quantities of wheat carried at that time. Air transport, and increased throughput of ofl and gas pipelines also contributed to the advance in total transportation.

Except for the 2 per cent increase in the electric power and gas utilities group, which resulted from a 16 per cent gain in the gas component, the remaining industry divisions showed little change in the quarter. Finance, insurance and real estate increased by about one half of one per cent, which is below trend for this industry group. Communty, recreation, business and personal service advanced by fust over half of one per cent, with personal service showing no change from the first quarter and the other three components recording increases in the the range of one to 5 per cent.
