DECEMBER INDEX OF INDUSTRIAL PRODUCTION

The seasonally adjusted Index of Industrial Production rose by 0.9 per cent in December, advancing to 291.7 from the revised November level of 289.2. About 60 per cent of the gain was due to the 2.0 per cent rise in durables and about 40 per cent to the 3.1 per cent increase in mining. Non-durable manufacturing fell by 0.8 per cent and the electric power and gas utilities industry was virtually unchanged.

The table below indicates some longer run changes; in column 1 the changes from the third quarter to the fourth quarter of 1967 are shown; and in column 2 the changes from 1966 to 1967. Column 3 gives 1946-66 annual growth rates.

STEL OF MUL	Seasonally adju	sted data	1946-66 Annual
	IIIQ.67 - IVQ.67	1966-1967	Growth Rates
PINASALI		per cent	
ndex of Industrial Production	1.3	2.7	5.7
Mining	1.1	6.3	8.9
Manufacturing	1.3	1.1	4.9
Durables	1.6	0.3	4.9
Non-durables	1.0	1.8	4.9
Electric Power and Gas Utilities	1.0	10.4	9.6

Returning to December, in durables some four-fifths of the gain was due to the 9 per cent increase in transportation equipment. Firstally all of the remaining durables gain was the to the 2 per cent advance in iron and steel products.

In transportation equipment, (+7), nearly all of the gain was tied to the auto industry, as motor vehicle production advanced by 13 per cent and parts and accessories by 9 per cent. In iron and steel products, (+2%), most of the gain occurred in primary iron and steel, (+5%), caused to a large extent by increased exports. The primary iron and steel gain was partially offset by a sizeable drop in the heating and cooking apparatus industry.

Non-durable manufactures declined by 0.8 per cent. Gains of from 2 to 4 per cent in foods and beverages, clothing, and rubber products were more than offset by decreases in the other 8 components. About half of the non-durable decrease was due to the fall in textiles. About two-thirds of the textiles' drop was due to the near 9 per cent fall in synthetic textiles and silks from an unusually high November level. Decreases in the remaining non-durables' group ranged from fractional to 3 per cent. Among the larger declines was that in pulp and paper which was in large part attributable to newspaper strikes in the U.S.

Mining advanced by 3.1 per cent. A little more than half of this was due to the 4 per cent gain in fuels; largely due to the near 5 per cent gain in petroleum. Natural gas also contributed to the gain, (+3%), while coal fell, (-10%). Non-metals advanced by nearly 9 per cent. The bulk of the gain here was due to increased potash production as one mine, which was shut down for about half of November due to mechanical difficulties, resumed production in December. In metals, (+2%), about half of the gain was due to the better than 4 per cent increase in iron ore, where production reached an all time high. The remainder of the metals gain was due to advances of from 3 to 7 per cent in other metals, gold, and copper.

The electric power and gas utilities industry was virtually unchanged, as an increase in gas almost entirely offset a decrease in electric power.

NOTE

The figures in tables 1 and 2 may not reconcile with those on the Index of Industrial Production in table 3 because of small revisions to Sept. which have not been incorporated in the latter table.

Real Domestic Product less Agriculture

Note to Users

The indexes of real domestic product at factor cost (the sum of the unduplicated output of all industries located in Canada) are an extension of the "Index of Industrial Production" to cover the whole range of domestic industries. In addition to mining, manufacturing and electric power and gas utilities, total domestic product includes the following industry groups: agriculture; forestry; fishing and trapping; construction; transportation, storage and communication; trade; finance, insurance and real estate; public administration and defence; and community, recreation, business and personal service.

The real domestic product indexes are also an elaboration of the supply side of the National Accounts. Total domestic product differs conceptually from constant dollar expenditure on Gross National Product by (1) the inclusion of income paid to non-residents (2) the exclusion of income received from non-residents, and (3) the exclusion of "indirect taxes less subsidies". In addition, of course, statistical differences may exist between these two measures of aggregate production.

The real output indexes in Table 3 serve to bring up to date the historical record of production in Canada published in the 1967 Annual Supplement to the Index of Industrial Production publication. For a detailed description of concepts and methods used as well as other relevant material, see D.B.S. Occassional Paper 61-505, "Indexes of Real Domestic Product by Industry of Origin, 1935-61".

Quarterly indexes for agriculture and for aggregate domestic production will not be available, except on a once-a-year basis; they will appear in the annual supplement to this report each spring.

Real Gross Domestic Product at Factor Cost

Production by Industry

Seasonally adjusted real domestic product less agriculture increased by 0.9 per cent in the third quarter of 1967. The non-agricultural goods-producing industries rose by 1.2 per cent, while the service-producing industries increased by 0.6 per cent. These changes can be compared with the previous quarter, when the service-producing industries rose by 2.4 per cent and the goods- producing, 0.1 per cent, and with the first quarter of this year, when the goods-producing industries decreased by 0.4 per cent and the service-producing industries were unchanged from their level in the fourth quarter of 1966.

Table A shows the percentage changes in the major industry groupings for the first three quarters of 1967, and their effect on the change in non-agricultural output.

Table B shows the percentage increases of the major industry groupings and their effect on the changes in total real output less agriculture, as measured from the cyclical low in the first quarter of 1961 to the third quarter of 1967 and each of the preceding three quarters.

Within the goods-producing industries, manufacturing, with a 1.0 per cent increase, contributed almost two-fifths of the third-quarter increase in total non-agricultural output.

The increase in manufacturing came mainly from the manufacture of durables, which increased by 1.9 per cent, while the manufacture of non-durables showed only a fractional positive change. Within durables manufacturing, the transportation equipment group rose by 9 per cent, which is a more-than-one-third contribution to the third-quarter increase in total non-agricultural output.

This rise came from the motor vehicles and motor vehicle parts and accessories components, which recorded advances of 10 and 14 per cent, respectively. Both of these industries continued to be affected by rising exports under the Canadian-U.S. auto trade pact. The advance in the manufacture of motor vehicles pushed the output of this component to a level higher than the previous record, established in the first quarter of 1966. If this industry is combined with the other motor-vehiclerelated series (manufacture of motor vehicle parts and accessories and retail sales of motor vehicle dealers) and deducted from the aggregate, the effect is to lower the third-quarter increase in total non-agricultural output from 0.9 per cent to 0.6 per cent. Movements in these series are illustrated in Chart A. Electrical apparatus and supplies was the other group within durables manufacturing to make a significant contribution to the third-quarter increase in total non-agricultural output. This contribution, of almost one-fifth, was partly accounted for by recoveries from strike effects and by increased production of auto radios. The most significant decline in any of the groups within durables manufacturing was registered for the iron and steel products group, which fell by 3 per cent. The two largest components, in terms of 1949 industry weights, within this group - primary iron and steel, and machinery and machine shops - fell by 5 and 3 per cent, respectively. Another component, bridge and structural steel, declined by 10 per cent.

The 0.3 per cent increase in non-durables manufacturing is a continuation of the fractional changes which have been recorded for these activities so far this year. Within non-durables manufacturing, rubber products rose by 12 per cent. The other groups showed only relatively small changes in weighted index points. Petroleum products, with a 3 per cent increase, was among these.

Also within the goods-producing industries, mining, which rose by 2.2 per cent, contributed nearly one-fifth of the third-quarter increase in total non-agricultural output. This was the third largest contribution among the eleven major industry groupings. The rise in mining was largely due to a 6 per cent advance in crude petroleum fuel mining, which can be linked to increased oil exports to the U.S. Crude petroleum mining output reached a peak in July and then slowly declined in August and September. The other mining components showed mixed movements, including a 19 per cent drop in lead mining and a 4 per cent decrease in copper mining (despite the copper strike in the U.S.).

The other two goods-producing industries that made positive contributions to the third-quarter increase in total non-agricultural output were electric power and gas utilities, and fishing and trapping. Electric power and gas utilities increased by 2.2 per cent, thus contributing less than one-eighth of the third-quarter increase in total non-agricultural output. Most of this increase came from the electric power component. Fishing and trapping rose by 10.9 per cent, because of a 13 per cent advance in fishing from a low second-quarter level. This rise, however, represented only a small contribution to the third-quarter increase in total non-agricultural output.

Forestry was the only one of the goods-producing industries to have a dampening effect on the third quarter. The decline in this industry, of 1.7 per cent, originated with decreases in cuttings of pulpwood and other wood. Cuttings were affected by closure of some of the B.C. forests due to excessive fire hazards.

Construction, the remaining goods-producing industry, was fractionally higher than its second-quarter level. This change was the result of an increase in public construction being lowered by a decrease in private construction. After an 11 per cent drop in the second quarter of this year, public construction began to recover to the level of activity that lasted from the second quarter of last year to the first quarter of this year. This recovery has been led by the public residential and non-residential construction component. The highway construction component of public construction has been declining following the surge of road-building that took place for Centennial year and EXPO. The decrease in private construction was the result of a 10 per cent increase in residential construction being more than offset by a decline in non-residential construction. Private residential construction was at a level higher than any quarter has been since the first quarter of 1964. This high level was established because of a 17 per cent increase in the number of housing units under construction and a 6 per cent increase in the number of completions, both of which reflected the very large increase in the number of units started in the first quarter. In contrast to the strong improvement in the private residential index, private non-residential construction had slipped to a level that is only somewhat higher than that of the second quarter of 1965. During the third quarter of this year the construction industry continued to be affected by strikes, mainly in Ontario.

Note: The columns may not add to the total due to rounding.

Within the service-producing industries, the community, recreation, business and personal service grouping, for the second quarter in a row, recorded the second-largest contribution to the quarterly increase in total non-agricultural output. This contribution, of about one-fourth, was the result of a 2.4 per cent expansion in this industrial grouping. Although the community group made a significant contribution, because of continued advances in the education and health components, the major contributions came from personal and business services, both of which reflected the effects of EXPO and centennial celebrations. The personal service components that increased included hotels, motels, and lodging houses, restaurants, and domestic service. Personal service as a whole grew by 3 per cent, while business service went up by 5 per cent.

Public administration and defence, with an increase of 2.4 per cent, contributed one-eighth of the third-quarter increase in total non-agricultural output. Provincial government administration was responsible for almost half of this contribution, with federal government administration, municipal government administration, and federal government defence sharing the remainder.

Finance, insurance and real estate was the other service-producing industry to contribute to the increase in total non-agricultural output this quarter. This contribution, of more than one-tenth, came from a 0.9 per cent increase in the grouping, with most of the increase taking place in the rents component.

The two remaining service-producing industry groupings - transportation, storage and communication, and wholesale and retail trade - recorded output levels which were only fractionally below those of the second quarter of 1967. In both instances the levels of the second quarter were new 'highs' which had been attained after large percentage increases. The transportation, storage and communication grouping decline of 0.7 per cent was affected by the shipping strike in August and September, while the trade decline of 0.4 per cent was the result of a slow-down in retail sales in July and August.

Within the transportation, storage and communication grouping, a decrease of 1 1/2 per cent in transportation and a drop of 13 per cent in storage more than offset an increase of 3 per cent in communication. Within transportation, the tendency of EXPO and centennial celebrations to encourage travel was shown in passenger gains recorded for air transportation (5 1/2 per cent), rail (6 per cent), bus (8 per cent), and urban transit (1 per cent). Urban transit transportation was affected by a major strike in Montreal which began on September 21. The water transportation strike from August 17 to September 23 had an even greater effect on the transportation group. This strike, and a decreased demand for exports of grain, were major contributors to the estimated decline of 29 per cent in the output of water freight shipping. Related declines occurred in grain elevators, which were down 17 per cent, and in stevedoring. Railway freight transportation (which has suffered from a 4 1/2 per cent drop in freight carloadings from the beginning of this year to the end of September compared to the same period last year) was also affected by these two conditions, as reflected in a 2 per cent decrease. Truck transportation was also probably affected. Pipelines transportation, which rose by 3 per cent, reflected greater oil exports to the U.S. Communication rose by 3.2 per cent because of increases in the postal and telephone services.

Within the trade grouping, retail trade declined by 0.9 per cent, while wholesale trade increased by 0.6 per cent. Within retail trade, most of the components registered decreases. Among the more significant of these were furniture and appliances (5 per cent), fuel dealers (15 per cent, perhaps affected by warmer-than-usual weather), clothing (3 per cent), and farm implement dealers (13 per cent, linked to a large drop in wholesale sales of farm machinery). One of the few store-types to increase from the previous quarter was motor vehicle dealers, which rose by 2 per cent. This increase, which was the result of expanded sales in September, did not quite reach the record

level of output for this industry which was achieved in the last quarter of 1965, and was considerably below the 10 per cent expansion in the manufacture of motor vehicles. Two other store-types that increased in the third quarter of this year were drug stores (3 per cent) and used car dealers (10 per cent).

Within wholesale trade, wholesalers "proper" rose by 1 1/2 per cent. Most of the components in this category fell, but two of those that rose were automotive parts and accessories (up 3 per cent) and clothing and furnishings (up 6 per cent). Of the components that fell the most significant was construction materials and supplies, with a decrease of 4 per cent. Industrial and transportation equipment and supplies also decreased, by 5 per cent, as did grocery and food specialities, by 2 per cent. Wholesale sales of farm machinery slipped 28 per cent below their second-quarter level. Most of this drop came in July and August, as did the sizeable decrease in retail sales of farm implement dealers. Both of these movements may be a reflection of the effects of the drought-like conditions which prevailed during much of this period in the Prairie Provinces. Also within wholesale trade, petroleum bulk tank stations decreased by one per cent.

First Nine Months of 1967

Table C shows that non-agricultural real output in the first nine months of this year rose by 2.8 per cent over the first nine months of 1966, on a seasonally unadjusted basis. This increase is in sharp contrast to the post-war average rate of growth of 4.8 per cent. Construction ramained as the major dampening influence on industrial growth during 1967.

An assumption of a one per cent increase, on a seasonally adjusted basis, in total non-agricultural real output in the last quarter of 1967 would result in a 3.1 per cent increase for 1967 as a whole, while a 2 per cent increase would result in a 3.4 per cent increase for the year. If production declines by one per cent in the remaining quarter, the increase for the year would be only 2.6 per cent.
