INDEX OF INDUSTRIAL PRODUCTION (1949=100)

FEBRUARY 1968

The seasonally adjusted index of industrial production declined by 1.1 per cent in February.

This issue contains indexes of non-agricultural real output for the latest available quarter (4th quarter 1967).

FEBRUARY INDEX OF INDUSTRIAL PRODUCTION

The seasonally adjusted Index of Industrial Production fell by 1.1 per cent in February, dropping to 284.4 from the revised January level of 287.6. A 1.9 per cent fall in manufacturing and a 0.8 per cent decline in electric power and gas utilities were only partially offset by a 2.4 per cent increase in mining. All of the reduction in manufacturing output was due to the 5.0 per cent contraction in durables as non-durables rose by 0.9 per cent.

The decline in durables' manufacturing was largely due to the effects of labour disputes on both the motor vehicles, (- 31%), and the motor vehicle parts, (- 26%), industries. If these two industries had maintained their January levels, durables manufactures would have risen by 0.7 per cent, total manufacturing by 0.8 per cent, and the Index as a whole by 0.9 per cent. With the industries still affected by labour disputes in March, little or no recovery in these areas is expected before April. Also contributing to the durables' decrease were declines of 1 per cent in wood products and 2 per cent in iron and steel products. The major factor in the latter decline was a near 9 per cent drop in iron castings; primarily due to decreased pipe production.

Partially offsetting the above declines were increases of 3 per cent in non-ferrous metal products, 7 per cent in non-metallic mineral products, (from an abnormally low January level), and 4 per cent in electrical apparatus and supplies. Virtually all of this latter gain was due to the 17 per cent increase in telecommunication equipment, and was in part due to increased production of colour television sets.

In non-durables, (+ 0.9%), three of the eleven major groups, (tobacco, clothing and rubber), fell, by 1, 2 and 7 per cent respectively. The remaining eight rose by amounts ranging from fractional to more than 6 per cent. In foods and beverages, (+ 0.7%), a better than 2 per cent rise in the foods component was offset to a considerable extent by a more than 3 per cent decline in beverages as distilleries fell by more than 14 per cent from their record January level.

Other major contributors to the non-durables' upturn were paper products which rose by 3 per cent, (largely due to the better than 2 per cent increase in pulp and paper), and products of petroleum and coal which rose by 6 per cent.

In mining, (+ 2.4%), all major components shared in the gain as metals rose by 2 per cent, non-metals rose by 6 per cent, and fuels rose fractionally. While almost all metals components rose, the major contributors were iron ore, (+ 4%), and copper, (+ 4%). In non-metals the gain was largely due to the potash component.

In electric power and gas utilities, (- 0.8%), a 1 per cent increase in electricity was more than offset by a decline in gas.

NOTE

The figures in tables 1 and 2 may not reconcile with those on the Index of Industrial Production in table 3 because of small revisions to December which have not been incorporated in the latter table.

Real Domestic Product less Agriculture

Note to Users

The indexes of real domestic product at factor cost (the sum of the unduplicated output of all industries located in Canada) are an extension of the "Index of Industrial Production" to cover the whole range of domestic industries. In addition to mining, manufacturing and electric power and gas utilities, total domestic product includes the following industry groups: agriculture; forestry; fishing and trapping; construction; transportation, storage and communication; trade; finance, insurance and real estate; public administration and defence; and community, recreation, business and personal service.

The real domestic product indexes are also an elaboration of the supply side of the National Accounts. Total domestic product differs conceptually from constant dollar expenditure on Gross National Product by (1) the inclusion of income paid to non-residents (2) the exclusion of income received from non-residents, and (3) the exclusion of "indirect taxes less subsidies". In addition, of course, statistical differences may exist between these two measures of aggregate production.

The real output indexes in Table 3 serve to bring up to date the historical record of production in Canada published in the 1967 Annual Supplement to the Index of Industrial Production publication. For a detailed description of concepts and methods used as well as other relevant material, see D.B.S. Occasional Paper 61-505, "Indexes of Real Domestic Product by Industry of Origin, 1935-61".

Quarterly indexes for agriculture and for aggregate domestic production will not be available, except on a once-a-year basis; they will appear in the annual supplement to this report each spring.

Real Domestic Product less Agriculture, Fourth Quarter, and the Year, 1967(1)

Seasonally adjusted real domestic product less agriculture increased by 0.6 per cent in the fourth quarter of 1967, advancing to 243.6 from the revised third-quarter level of 242.1. More than 60 per cent of this increase came from manufacturing, with 30 per cent contributed by transportation, storage and communication, and more than 20 per cent from finance, insurance and real estate. The non-agricultural goods-producing industries rose by 0.5 per cent, and the service-producing industries went up by 0.7 per cent.

Non-agricultural real output rose by 3.1 per cent during 1967, compared to the 6.7 per cent expansion that was recorded for 1966. The rate of growth for 1967 is also considerably less than the average annual rate of growth of 4.5 per cent that took place in the 1946 to 1966 period. Several of the major industry groupings showed increases that were well below their post-war average rates of growth. Manufacturing, for example, increased by only 1.1 per cent in 1967 compared to 4.9 per cent in the same period, while construction fell by several percentage points from its 1966 level. Of the major industry groupings that rose, the transportation, storage and communication grouping registered the most significant increase, rising to 5.8 per cent from 4.8 per cent during 1946 to 1966.

Production by Industry, Fourth Quarter, 1967

Within the goods-producing industries, manufacturing rose by 1.3 per cent, with more than half of the gain coming from the manufacture of durables, which was up 1.5 per cent, while non-durables increased by 1.1 per cent. Within durables' manufacturing, the iron and steel products group expanded by 5 per cent. The major factors in this expansion were the primary iron and steel and the iron castings components, which advanced by 10 per cent and 24 per cent, respectively. In both cases manufacture of pipe was the major cause of the gains. Production of motor vehicles also rose, by 2 per cent, as gains in November and December offset the October decline which was attributable to the effects of labour disputes in the U.S. industry. Within non-durables' manufacturing, all groups increased, with the exception of rubber products, by amounts ranging from 1 to 4 per cent. The clothing and textile products groups between them accounted for more than half of the total increase in non-durables' manufacturing.

Mining rose by 1.3 per cent, with gains of 7 per cent in metal mining and 1 per cent in non-metal mining being partially offset by a 4 per cent decline in fuel mining. The main factor in the metal mining increase was a 22 per cent advance in iron ore. Crude petroleum accounted for the fuel mining decline, falling from an unusually high third-quarter level.

Electric power and gas utilities increased by 0.5 per cent in the fourth quarter, whereas forestry declined by 5.5 per cent, because of decreased cuttings of pulpwood and other types of wood.

Construction declined by about 2 per cent, with a drop in public construction partially offset by an increase in private construction.

Within the service-producing industries, transportation, storage and communication rose by 1.9 per cent, with transportation expanding by 2 1/2 per cent, and communication by 1/2 per cent, while storage was only slightly higher than its third-quarter level. Within transportation, water transportation provided the main strength by recovering from the strike effects of the previous quarter. Air transport was also strong (up 4 per cent), as was transportation by pipelines (up 3 per cent, because of gas pipelines). Passenger transport showed the major weakness, reflecting the urban transit strike in Montreal which lasted from September 21 to October 21 and the lack of EXPO traffic in the last two months of the quarter. Railway transport was also down, by 1/2 per cent, due to a fractional decline in the freight component and a much larger decline in the passenger component, which was also affected by the post-EXPO period. Within communication, the telephone component rose by 2 per cent.

The finance, insurance and real estate grouping rose by 1.4 per cent, with more than half of this increase coming from the rents component.

(1) It should be noted that the movements shown here may not always coincide with constant price gross national expenditure data in the quarterly national income and expenditure accounts, due to coverage and conceptual differences. Among these differences are the exclusion of agriculture from the real domestic product data, factor cost versus market price valuation, and the use of domestic versus national boundaries.

Wholesale and retail trade increased by 0.9 per cent, with retail trade 0.6 per cent higher than its third-quarter level, and wholesale trade, 1.3 per cent higher. Within retail trade, almost all of the components showed relatively small movements. Farm implement dealers was the only store-type to record a large increase, of 10 per cent, which represented a partial recovery from a very low third-quarter level. Within wholesale trade, movements were mixed. The groceries and food specialties component increased by 1 per cent, while the construction materials and supplies component decreased by 1 per cent.

The community, recreation, business and personal service grouping declined by 1.3 per cent over the third quarter of 1967, mainly because of a drop of 4 1/2 per cent in the personal service group. This drop was concentrated in the restaurants and the hotels, motels and lodging houses components, which reflected the closing of EXPO at the end of October. Continued advances in the education and health components resulted in a 1/2 per cent increase in the community group.
