## CHEQUES CASFED IN $1944{ }^{\circ}$

The dollar volume of cheques cashed in the 33 clearing centres during 1944 amounted to $\$ 60,677$ million, en increase of nearly $\$ 6.9$ billion or 12.8 p.c. over 1943 and a larger amount than recorded for any other year. The previous maximum was reached in 1943 when the total was $\$ 53,797$ million. The seascnally adjusted index of bank debits was viell maintained throughout the year, featured by abrupt rises in May and November when Victory Loan purchases added sherply to the amount of cheques cashed. When it is recalled that the debits of 1943 were 18.2 p.c. greater than during 1942, a slackening in the pace of expansion is apperent.

A majority of economic factors also indicated that the expansion of preceding war years was checked in 1944. The index of the physical volume of business recorded on increase of only $0.4 \mathrm{p} . \mathrm{c}$. The general index of employment at 183.0 in 1944 showed a decline of 0.6 p.c., the recessicn being common to manufacturing, mining and construction. Minor increases were shown in prices of commodities and of high-grade bond prices. The increase in the deposit liabilities of the chartered banks was no less than 17.5 p.c. While the outbtending economic factors averaged somewhat greater than in 1943, the slackening in the advance occasioned by the magnitude of the war effort was unnistakable.

The exponsion in cheques cashed was general in the five economic areas during 1944. The gain in the Prairie Provinces at nearly 25 p.c. was excepticnal. Advances in British Columbia and Quebec amcunted to 13.3 p.c. and $12 \mathrm{p} . \mathrm{c}$. , respectively. The gain in Ontario was $9 \mathrm{p} . \mathrm{c}$., the Maritimes following with an increase of 6.7 p.c.

Eleven centres recorded bank debits in excess of one billion dollars. Montreal and the city of Quebec had debits of $\$ 15.4$ billion and $\$ 1.6$ billion, respectively. The cities of Ontario in this categasy were Tcronto, Ottawa, Hamilton and Windsor. Cheques cashed in Toronto were $\$ 14.4$ billion, en increase of 10.3 p.c. having been shown over the preceding year. The total for Ottawa bugmented by governmental transactions wes $\$ 7.7$ billion, a gain of $9.4 \mathrm{p} . \mathrm{c}$. The debits of Homilton and Windsor were $\$ 1.4$ billion and $\$ 1.0$ billion, respectively.

Four cities in the Prairie Provinces hed debits of one billion dollsrs or more. The total for Winnipeg was nearly $\$ 7$ billion, an increase of about $25 \mathrm{p} . \mathrm{c}$. having been shown over 1943. Cheques cashed in Calgary, Regina and Edmonton were also in excess of one billion dollars. The debits of Vancouver amounted to $\$ 3.1$ billion, constituting the only centre in British Columbia in the group under discussion.

Thirty of the 33 clearing centres showed increases in 1944 over the preceding year. Twelve of the 14 centres in Ontario were at higher levels and two of the three centres in British Columbia recorded increases. Each of the centres in the Maritimes, Quebec, and the Prairie Provinces rose to a higher position as far as bank debits are concerned.

Reflecting the marked economic activity based primarily upon the production of munitions and war supplies and the high levels of pay and allowances to the armed

forces, cheques cashed in Canada rose to a new maximum in 1944. The previous high point was reached in the preceding year, the further edvance in 1944 having been 12.8 p.c. Using bank clearings for extrapolation from 1919 to 1923, a continuous series is mede availeble from the end of the last war to the present. Three mejor cycles culminating in 1920,1929 and 1944 were in evicience in the 25 years. The cheques cashed in 1929 reached $\$ 46,671$ million, a position about $23 \mathrm{p} . \mathrm{c}$. below that of lest year.

## CANADA'S EQUATION OF EXCHANGE, 1924 - $1944^{\circ}$

The money supply posted a further substantial increase in 1944, rising from $\$ 4,837$ million in 1943 to $\$ 5,688$ million. Since September, 1939 the quantity of money has risen rapidly in immediate and pronounced response to the effects of war. The general rule that war stimuletes the growth of the money supply has been demonstrated repeatedly both in this country and elsewhere. The sum of bank notes and coin in the hands of the public and bank deposits subject to cheque rose from $\$ 2,672$ million in 1938 to $\$ 5,688$ million last year, an increase of no less than 112.9 p.c.

Bank notes in the hands of the public recorded the greatest percentage increase of the three main components. The advance since 1938 was from $\$ 203.7$ million to $\$ 857.9$ million, amounting to 321.2 p.c. It is estimated that coin in the hands of the public rose from $\$ 29.4$ million in 1938 to $\$ 56.9$ million in 1944 . The indicated increase was 93.7 p.c. while the sum of the notes and coin showed an advance of 292.5 p.c. The sum of the four clesses of deposits of the chartered banks and two classes with the Bank of Canada mas 95.7 p.c. greater. The average for the twelve months of $194 /$ was placed at $\$ 4,773$ million.

A great expansion in economic activity since the beginning of the var is apparent in almost every field. The increase both in the general level of prices and in the physical volume of goods end services, signifles also a marked adaition to the work required of the money supply. It is evicient that the increase in the money supply permitted the greater volume of monetary transections. The data given in Table 10 indicate that the change in the velocity of the money supply between the tro years was insignificant. The velocity in 1944 was 15.08 comparec with 14.62 in 1938.

It is estimated that cash and cheque payments rose from $\$ 39,052$ million in 1938 to $\$ 85,791$ million last year. The increase was about $120 \mathrm{p} . \mathrm{c}$. compared with an advance of 112.9 p.c. in the money supply.

## Method of Compilation

Bank notes in the hands of the public were obtzined by deducting the "nctes held by other banks" from the total circulation of bank notes. Previous to March 1935, Dominion nctes in the possession of the banks ond the central gold reserves were deducted from the total issue of such notes. For the last nine months of 1935, the holdings of the chartered banks of Bank of Canada notes were deducted from the total amount of such notes outstending. This method was continued in subsequent years.

The amcunt of subsidiary coin held by the Bank of Canada and the chartered banks in Canada is reported monthly. The cutstanding silver, nickel and bronze ccins at the end of each month are reported by the Mint. The bank holdings were deducted from the outstanding coin to obtain the amount in the hands of the public.

Adding the total of notes and subsiciary coin obtained by this method, we have the amount of circulating media in the hands of the public.
$M_{1} \quad$ The sum of the Dominion and Provincicl government deposits and the notice and demand deposits of the chartered banks and the Dominion gcvernment and "other" deposits mith the Bank of Canads, is regarcled as in i.e. deposit liabilities of the banks subject to cheque. The average of the twelve month-cnd totals was used ar annuel data.
$M_{1} V_{1} \quad$ Bank debits as published by the Bureau are available from January, 1924 for thirty-two or hirty-three clearing centres. By a test made for January 1935, it was found that cheques cashed outside of clearing centros amounted to $12 \frac{1}{2}$ per cent of the published totals. The debits against the two deposit accounts of the Bank of Canada are estimated on the tasis of the turnover of current accounts with the chartered banks. Adding $12 \frac{1}{2}$ per cent to statistics from clearing-house centres disregarding the estimate of the cheques cashed by the Bank of Canada, a series roughly equivelent to $\mathrm{MIV}_{1}$ is obteined.
$V_{1}$ Upon dividing bank debits plus the $12 \frac{1}{2}$ per cent, by bank deposits, we ascertain the velocity of deposits, the $V_{1}$ of the equation.

V As no statistics are available showing the amount of money paid into the chartered banks during any given period, it is impossible to directly obtain the velocity of circulating media in the hands of the public.

It is inferred from experience in the United States that the turnover of money is about 16.5 per cent greater than the turnover of deposits. The estimated velocity of money in the United States from 1896 to 1909 was nearly 21 per year according to statistics given in Irving Fisher's "Purchasing Power of Money". The average turnover of deposits in Canada from 1919 to 1939 was 17.5. The tarnover of money on this basis was regarded as being 16.5 per cent greater than that of deposits. These assumptions admittedly involve a margin of errcr, but noney payments pley a small part in comparison with cheque payments and the resulting error in total paymente is not regarded as important.

MV Multiplying the circulating media in the hands of the public by the velocity, the total cash payments were obtained. Total payments by cash and cheque, $M V+M V_{1}$, were obtained in millions of dollars by addition, the results being shown in Table 10.

The index of nationsl income estimates, embracing in terms of value the entire economic activities of the Dominion, shoula correlste with the sum of cheque and cosh peyments.

The main factors in the equation of exchange are shown by years during the period from 1924 to the present in Tables 7 to 10.
