SURVEY OF PRODUCTION

in

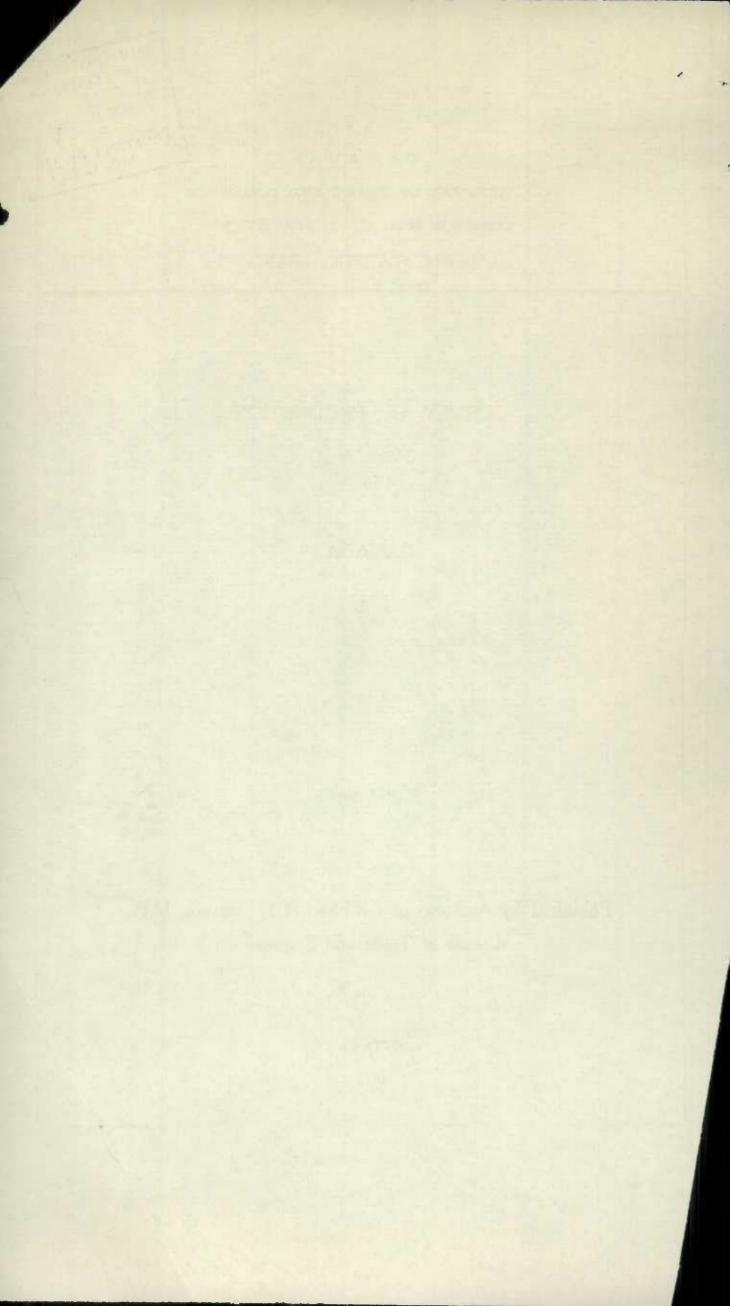

CANADA

1930

Published by Authority of the Hon. H. H. Stevens, M.P., Minister of Trade and Commerce

OTTAWA

1932

of the total net production. However, as explained, hereafter, a number of industries listed under manufactures are also included in the several extractive industries with which they are associated. Eliminating this duplication, the output of the manufacturing industries not elsewhere included was 40.7 p.c. of the total net production. Forestry held third place in 1930 with a percentage of 9.4 p.c. Construction was in fourth place, with a percentage of 9.2 p.c., followed by mining, with a percentage of 817 p.c.; in 1929 mining represented 7.9 p.c. and forestry 8.6 p.c. The electric power group in 1930 had an output of 3.9 p.c. of the total net production. Repair work, fisheries and trapping followed with percentages in 1930 of 2.7, 1.5 and 0.3, respectively.

The Trend of Provincial Production during Recent Years

The net value of production in the Maritime Provinces was less in 1930 than in any year from 1926 to 1929. The total in 1930 at \$211,415,000 was 12 p.c. less than in the preceding year. The lowest point in the eleven-year period under observation was in 1924, the total for the three provinces dropping in that year to \$192,507,000. Industrial revenue in 1925 was also on a moderate level, the gain in 1930 over 1924 and 1925 being 24.8 p.c. and 17.2 p.c., respectively.

Due to greater industrial development, cyclical fluctuation was more pronounced in Nova Scotia than in either New Brunswick or Prince Edward Island. From 1925 to 1928 Nova Scotia showed rapid expansion, while the maximum during the last cycle in the other provinces of the economic area was reached in 1926. Declines were general in the three provinces during 1930 from the preceding year.

The expansion in the industrial production of Ontario was continuous from 1921 to 1929, the total net value in the latter year being \$1,658,000,000. This compares with \$1,115,000,000 in 1921, a gain of 48.6 p.c., during the nine years. The total in 1930 was \$1,380,000,000, a decline of 16.8 p.c. from 1929. Industrial revenues in Quebec made no progress toward recovery from 1921 to 1924, but otherwise the curve of the values of net production was closely correlated with Ontarid. The total in 1930 was \$892,000,000 compared with \$1,049,500,000 in the preceding year, a decline of 15 p.c.

The Prairie Provinces, especially Saskatchewan and Alberta, were favoured from 1925 to 1928 with excellent grain crops and relatively profitable prices. In 1929 and 1930 yields were not so bountiful and drastic declines were shown in agricultural prices. The net value of production in the three provinces reached high levels from 1925 to 1928. Subsequent to that period, the decline was well defined, the total in 1930 at \$460,964,000 being 30.3 p.c. less than in the preceding year. The dependence on the grain crop was a factor in the wide fluctuation of recent years in the value of net production in Saskatchewan and Alberta.

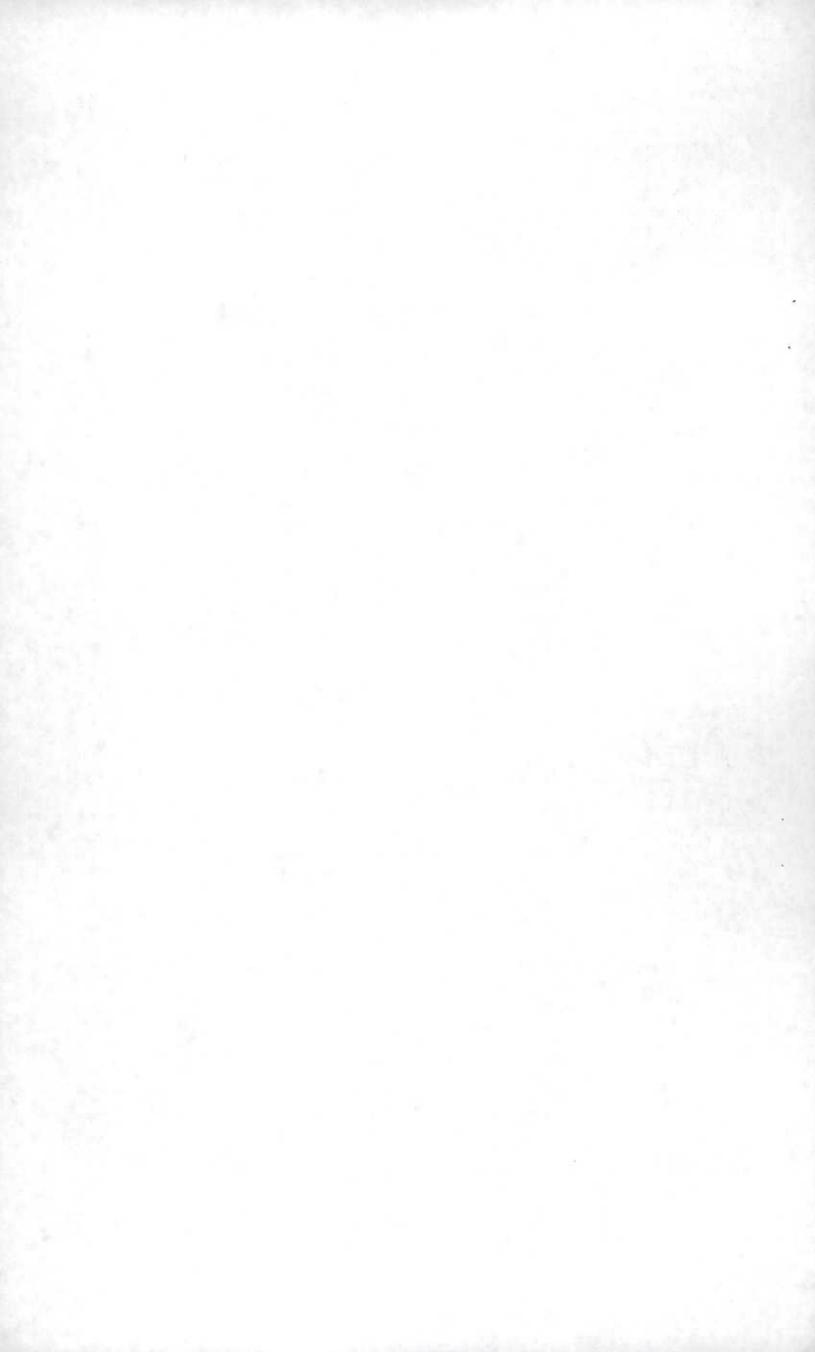

The steady advance shown in British Columbia during the long cycle from 1922 to 1929 was reversed in 1930 when a decline of nearly 19 p.c. was shown from the preceding year. A chart of the trend of the value of net production for the eleven years in the five economic areas, is presented on page 14.

Comparison of 1930 with 1929 by Provinces

Declines were general in the nine provinces in 1930 from the levels of the preceding year. The manufacturing eastern provinces were less affected by the depression than the agricultural western provinces.

New Brunswick of the nine provinces showed the smallest percentage decline in 1930 from the preceding year. The drop in New Brunswick was limited to \$8,610,000 or 9.9 p.c. The decline in Nova Scotia was \$14,977,000 or 11.6 p.c., while the drop in Prince Edward Island was \$6,817,000 or 29.1 p.c.

Net production in Quebec at \$892,076,000 was off 15 p.c., while Ontario showed a decline of 16.8 p.c., the total for 1930 being \$1,380,459,000. The value of production in Saskatchewan was \$134,134,000 in 1930 compared with \$238,782,000 in 1929, indicating a sharp docline. The total in Manitoba at \$142,170,000 showed a decline of \$43,061,000 or 23.3 p.c. The drop in Alberta.was 22.3 p.c., while British Columbia showed a decline of 19 p.c. (See Table 2 for summary of values.)

Relative Production by Provinces, 1930

Ontario and Quebec held first and second places among the provinces in the net value of production, and the percentage of production in each of these provinces to the total was higher than in 1929. The net output in the two provinces during 1930 represented 42.9 p.c. and 27.7 p.c., of the total, respectively, compared with 42.0 p.c. and 26.6 p.c. in 1929. British ^Columbia held third place with a percentage of 8.4, the relative position not being greatly changed from the preceding year. Alberta occupied fourth place in 1930 with a percentage of 5.7 p.c., while Manitoba was fifth with a percentage of 4.4, and Saskatchewan sixth with a percentage of 4.2. Nova Scotia, New Brunswick and Prince Edward Island were next in importance in the order named with percentages of 3.6, 2.5 and 0.5, respectively. The Yukon Territory contributed 0.1 p.c. of the total.

Types of Productive Activities in the Provinces, 1930

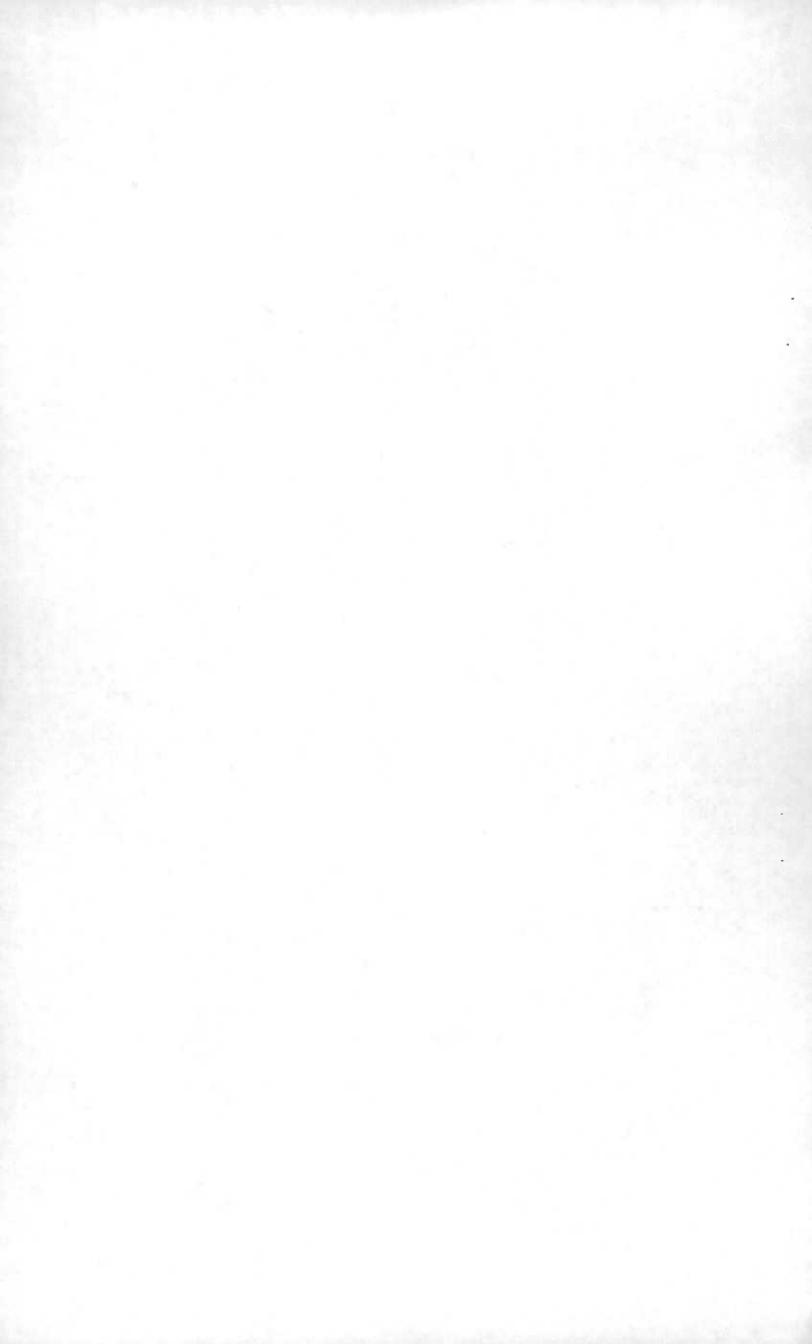

The Maritime Provinces. - Production in Nova Scotia was principally in manufacturing, mining and agriculture and fisheries, which were respectively accountable for 36.1 p.c., 23.6 p.c., 22.5 p.c. and 9.1 p.c. of the net output of the province; the contribution of manufactures, aside from processes carried on in connection with the extractive industries, was 25.0 p.c. In New Brunswick, manufacturing took first place as a producer of new wealth, the proportion being 37.5 p.c. before and 19.0 p.c. after elimination of duplication, while agriculture furnished an output of 2918 p.c. Forestry occupied third place with an output of 27.9 p.c., followed by construction with 9.1 p.c. and fisheries with 6.2 p.c. Agriculture, including fur farming, contributed 76.8 p.c. of the net output of Prince Edward Island. Of the nine branches of industry in the Maritime Provinces, the generation of electric energy and trapping alone showed gains in 1930 over the preceding year, the net result being a decline of 12 p.c. in the Maritimes as a whole.

<u>Quebec.</u>- The product derived from manufactures in Quebec was greater than that from any other industry. Manufactures, aside from the output of establishments associated with the extractive industries, contributed 45.2 p.c., while the net output of the entire manufacturing division, referred to the same base, was 62.9 p.c. Agriculture with 19.4 p.c., forestry with 12.4 p.c. and construction with 11.3 p.c. occupied second, third and fourth places. The increases in 1930 over the preceding year in forestry and in the generation of electrical energy were 5.1 p.c. and 3.5 p.c., respectively.

Ontario.- The net production from the manufactures of Ontario, when stripped of all duplication, was \$708,000,000 or 51.3 p.c. of the total compared with \$278,-000,000 or 20.2 p.c. from agriculture. The total value added by manufacturing, including the processing performed in connection with the extractive industries, was \$876,000,000, constituting 63.5 p.c. of the value of net production in the Province. Construction held third place with 8.3 p.c. of the total, and mining followed with 8.2 p.c. The forestry output was 5.4 p.c. of the net production. Decreases from 1929 were shown in all the main divisions of production. The net output of manufactures decreased by \$146,600,000, while agriculture showed a decline of \$61,900,000. Except in forestry and fisheries, Ontario led the other provinces and divisions in the productiveness of the main branches of industry. The province yielded precedence in forestry operations to Quebec alone, while British Columbia, Nova Scotia and New Brunswick obtained a greater income from fisheries. About 49.7 p.c. of the net manufacturing output of the country was contributed by Ontario, and 36.7 p.c. of the agricultural income was derived from the same source.

<u>The Prairie Provinces.</u> About 57.9 p.c. of the output of Saskatchewan was obtained from farming, which also largely predominated as a producer of new wealth in Manitoba and Alberta, the proportions being 32.8 p.c. and 46.9 p.c., respectively. Mineral production, chiefly coal-mining, held second place in Alberta, with an output of 16.6 p.c. of the provincial total. Manufacturing was second in importance in Manitoba, representing 36.9 p.c. of the value of the net output. Moderate grain yields and lower prices accounted mainly for the decrease in the net production of the three Prairie Provinces. In Manitoba, mining and electric power showed gains in 1930 over the preceding year. The forestry, mining and electric power industries of Saskatchewan showed gains in 1930, while the net revenue from the electric power industry of Alberta was somewhat greater.

British Columbia. - The net production from manufacturing in British Columbia during 1930 was about \$118,000,000, but more than half of this amount was derived from manufacturing processes closely associated with the primary industries, especially logging and fishing. The remainder, \$50,911,000, was 18.9 p.c. of the net output of the province. Aside from manufacturing, forestry constituted the chief source of new wealth, about 24.0 p.c. of the total output of the province being contributed by the forest. Mining and farming followed in order, with percentages of 20.4 and 12.8, respectively. (See Tables 4 and 5 for details.)

The Method of Computation

The chief difficulty encountered in the preparation of a statement of general production is the duplication; resulting from the tendency in usual practice to make undue extension of the concept of several of the branches of production. For example, the making of brick, tile and cement are frequently included in "mineral production" as being the first finished products of commercial value resulting from the production process; frequently, however, they are regarded as "manufactures" in view of the nature of the production process - both allocations being correct according to the point of view. The greater part of the duplication requiring adjustment consists in manufacturing processes which are carried on in close association with the primary or extractive industries. For example, dairy factories, which are closely associated with farming, are regarded as manufacturing industries. To guard against any misconception in this regard, the various dispositions of the items falling under more than one category are shown in Table 3.

"Gross" and "Net" Production.- The values of products are shown under two headings, namely, "gross" and "net". "Gross" production shows the total value of all the individual commodities produced under a particular heading. "Net" production represents an attempt to eliminate the value of materials consumed in the production process. For purposes of ordinary economic discussion, the net figures should be used in preference to the gross, because of the large amount of duplication which the latter includes on account of the necessity of making the individual items self-contained.

Interpretation of Items. The primary industries of agriculture, fishing, forestry, mining, etc., are separated in this statement from the secondary or manufacturing processes. The close association between the two and the overlappings that are apt to occur have already been pointed out. As further explaining the procedure that has been followed in drawing up the tables, the following notes are appended:-

Agriculture. - Dairy factories are included under this heading; farm dairy products (gross) include the milk consumed whole and sold to dairy factories, and butter, etc., made on the farm.

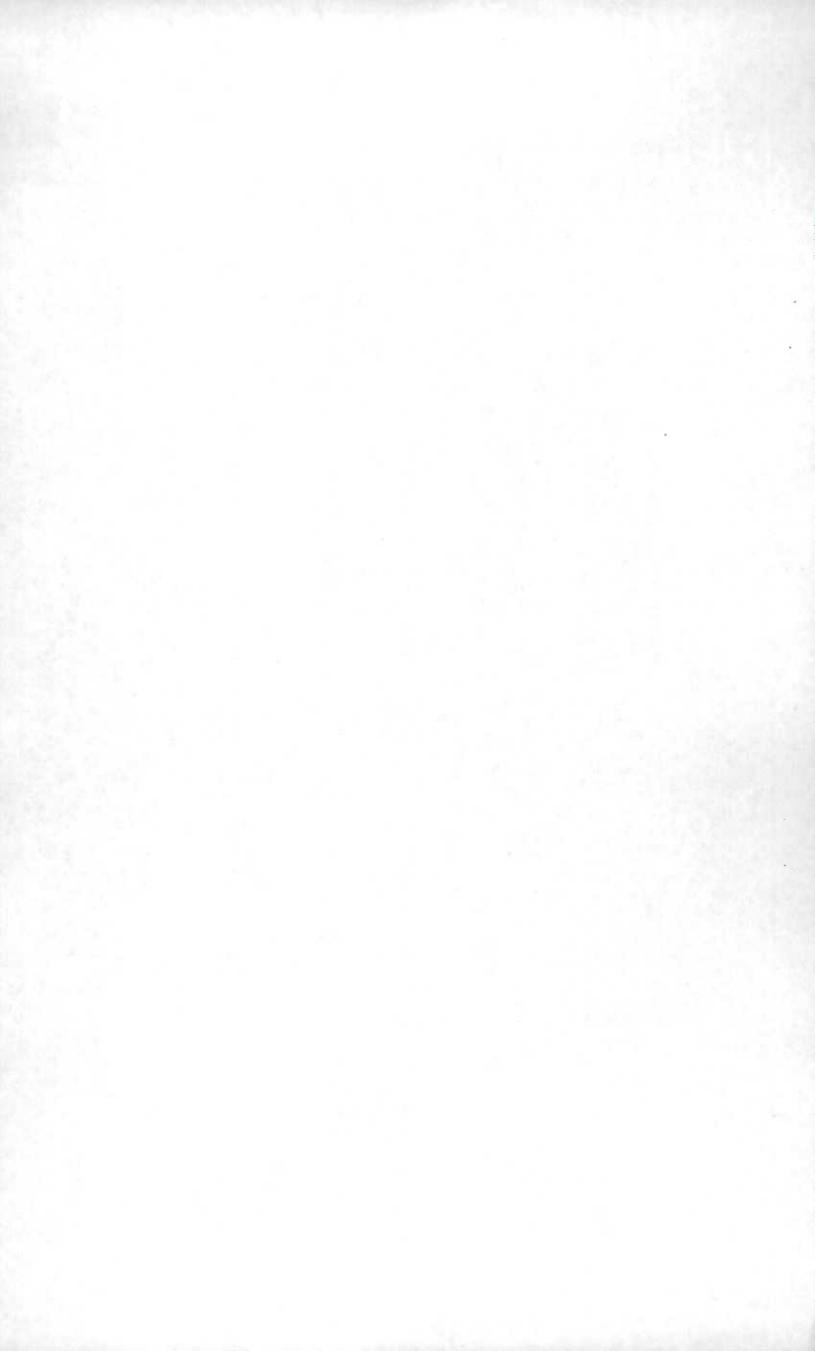

Forestry. - Forestry production is understood to consist of the operations in the woods as well as those of saw-mills and pulp-mills, the latter being limited to the making of first products such as lumber, lath, shingles, pulp and cooperage stock.

Fur Production. - The item of fur production is limited to wild life production. To obtain a total of the peltries produced in Canada it would be necessary to add to the wild life output the production of pelts on fur farms.

Mineral Production.- Under mineral production all items are included that might be allocated to "manufactures". Considerable overlapping exists as between "mineral production" on the one hand and "manufactures" on the other. The Bureau presents the detailed statistics of these groups (the chief of which are smelting, brick, cement, lime, etc.) in its reports on mineral production, since their product is the first to which a commercial value is ordinarily assigned.

Total Manufacturing. - The figure given for the heading is a comprehensive one, including the several items listed with the extractive industries above, though also frequently regarded as "manufactures", via., dairy factories, fish canning and curing, saw-mills, pulp-mills, shipbuilding and certain mineral industries. This duplication is eliminated from the grand total as well as from "manufactures, n.e.s.", listed in Table 3.

<u>Manufacturing</u>, n.e.s.- The figures given for manufactures, n.e.s., are exclusive of the value of the products of all manufacturing processes closely associated with the extractive industries that are frequently included under this heading; hence it is obvious that the grand total is equivalent to an amount obtained by adding the values for manufactures, n.e.s., and for the other eight divisions.

TATLE 1 - SUMMARY BY INDUSTRIES OF THE VALUE OF PRODUCTION IN CANADA FROM 1924 to 1927.

| Division. | 1 9 | 2 4 | 19 | 2.5 | 1 9 | 2 6 | 1 9 | 2 7 | |
|-------------------------------------|---------------|---------------|------------------------|---------------|---------------|-----------------|---------------|---------------|--|

| Custom and Repair (a) | 90,837,351 | 58,053,266 | 96,280,000 | 61,534,000 | 107,367,900 | 68,743,000 | 116,082,000 | 74,174,000 | |
| Manufactures (b) | 2,695,053,582 | 1,256,643,901 | 2,948,545,315 | 1,360,879,907 | 3,247,803,438 | 1,519,179,246 | 3,425,498,540 | 1,635,923,936 | |
| Total Second- ary Producticn (b) | 3,073,578,742 | 1,501,811,582 | 3,355,0 40 ,796 | 1,624,516,797 | 3,741,084,871 | 1,839,010,369 | 4,030,020,267 | 2,028,042,063 | |
| GRANI TOTAL | 4,930,417,387 | 3,018,182,081 | 5,412,657,934 | 3,325,115,594 | 5,010,468,579 | 3, 13, 455, 948 | 6,180,559,051 | 3,896,280,555 | |

(a) Statistics of Custom and Repair were not collected after 1922, and to secure comparability, the totals for that year were repeated in 1923 and 1924. The totals for 1925, 1926 and 1927 were estimated according to the percentage change in the data for manufacturing.

(b) The item "Manufactures" includes dairy factories, sawmills, pulpmills, fish canning and curing, shipbuilding and certain mineral industries, which are also included in other headings above. This duplication amounting in 1924 to a gross of \$503,446,583 and a net of \$279,310,986, in 1925 to a gross of \$603,132,346 and a net of \$324,348,686 in 1926 to a gross of \$650,369,405 and a net of \$315,083,730 and in 1927 to a gross of \$677,458,550 and a net of \$345,247,482, is eliminated from the grand total.

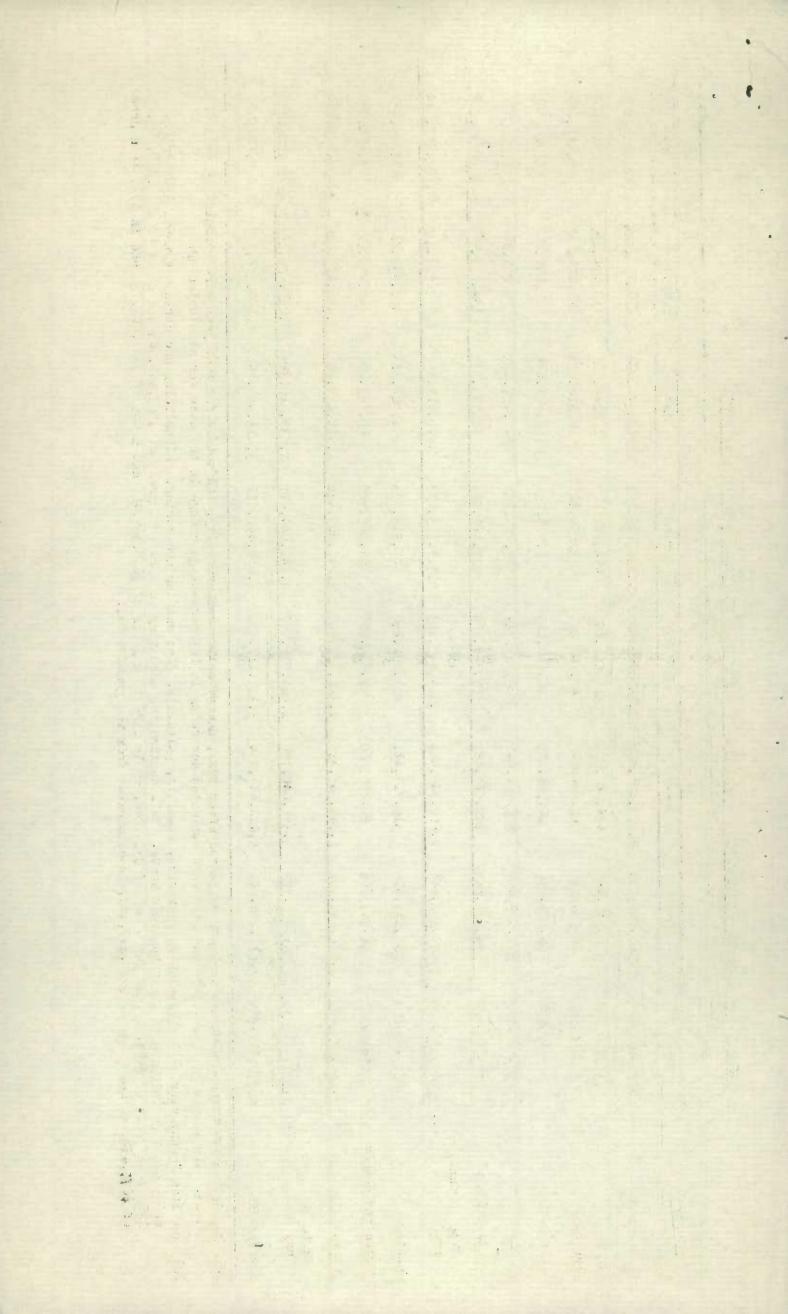

TABLE 2 - SUMMARY BY PROVINCES OF THE VALUE OF PRODUCTION OF CANADA, 1925 to 1927.

| Province | 19 | 2 5 | Percentages of Total | 19 | | Percentages of Total | 1 9 | 927 | Percentages of Total |

TABLE 4 - VALUE OF PRODUCTION IN THE PROVINCES OF CANADA DURING 1926 and 1927, BY INDUSTRIES, (Con't.)

(a) See page 12 for note in regard to duplication.

E

(a) The totals for manufactures involve duplicated amounts which were deducted in computing the grand total for each province. The duplication arises from including in two places a number of industries which may be regarded as extractive or as manufacturing processes. Shipbuilding has been included under construction as well as under manufacturing. The following statement gives the amount of the duplication by provinces:

Ż
