# Private and Public Investment in Canada Outlook 1963

and

OF STUDISTICS

AUG 12 1963

PROPERTY OF THE

**REGIONAL ESTIMATES** 

Published by Authority of The Honourable M. Wallace McCutcheon

Minister of Trade and Commerce

ROGER DUHAMEL, F.R.S.C. QUEEN'S PRINTER AND CONTROLLER OF STATIONERY OTTAWA, 1963

## INTRODUCTION

This report sets out the 1963 capital spending intentions of all sectors of the Canadian economy. Comparative figures of actual expenditures in 1961 and 1962 are also given. The figures, for the most part, are based on the results of a questionnaire survey of individual companies and other spending agencies. These questionnaires were completed near the end of 1962 and the figures reflect spending plans as formulated at that time.

The estimates cover total outlays for construction and for the acquisition of producers' machinery and equipment by Canadian business, institutions and governments, together with expenditures for housing. For most industry groups the expenditure estimates are based upon the sum of the reported spending plans of individual companies within each industry. In total about 18,000 business establishments were surveyed as to their investment intentions. The totals shown have been adjusted to include imputed expenditures for firms that did not report and for the smaller firms which were not surveyed. In a few areas, where the survey approach is not considered to be practical, expenditures were estimated independently on the basis of current trends and expert opinion in these fields. The principal areas so estimated are agricultural investment and housing expenditures. Estimates of outlays by governments and institutions were based on a survey of the appropriate agencies.

For the purposes of this report construction includes both contract and force account work. In addition to building construction the estimates cover all types of engineering construction such as roads, dams, transmission lines and pipe lines as well as oil well drilling and mine development. The machinery and equipment category covers the purchase of all such items which are used either in producing goods or providing services but does not include durable goods purchased for personal use. Included, as well as industrial machinery, are transportation equipment, agricultural implements, professional and scientific equipment, office and store furnishings and other similar capital goods, Excluded, for the purpose of this report, are outlays for equipment by the Department of National Defence.

Information on capital spending intentions provides a useful lead to market conditions both in the economy at large and in particular industries. Since such expenditures account for a large, and traditionally variable, proportion of the national product, the size and content of the investment programme provides an indication of certain of the more volatile demands to be placed upon the productive capacities of the economy during the period covered by the survey. In addition, information on the relative size of the capital expenditure programme planned, both in total and for individual industries, gives an indication of the views of management on prospective market demands in relation to present productive capacity.

Repair expenditures on structures and machinery and equipment are also given in the report but these are shown separately. By including these expenditures a more complete picture is provided of all demands likely to be made on labour and materials in accomplishing the programme.

This report on the outlook for investment in Canada in 1963 is a joint project of the Dominion Bureau of Statistics and the Economics Branch of the Department of Trade and Commerce,

JAMES A. ROBERTS,

Deputy Minister, Department of Trade and Commerce.

#### SECTION I. APPRAISAL OF THE 1963 CAPITAL PROGRAMME

#### The Total Programme

A recent survey of the capital spending intentions of all sectors of the Canadian economy revealed plans for outlays of \$9.1 billion in 1963. The survey covered business establishments, institutions and all levels of government. The total includes, too, estimates for the construction of new housing. A capital programme of this magnitude would be the largest on record, exceeding the \$8.7 billion spent last year by about four per cent. Expenditures both for construction and for the acquisition of machinery are expected to be higher in 1963. Plans involve a four per cent increase in construction spending and a five per cent rise in outlays for machinery. The projected rise in capital spending in 1963 follows a significant increase in such spending last year when the total exceeded the previous record established in 1957. The accomplishment of the programme now planned would provide continuing strong support to the Canadian economy in 1963.

The following table illustrates the trend in capital spending in recent years in both current and constant (1957) dollars.

		(	Capital Expenditures

<sup>1</sup> Newfoundland not included in these years.

#### The Composition of the Programme

In 1963, a higher level of capital spending is anticipated both for business investment and for social capital purposes. Housebuilding activity, on the other hand, may hold close to the 1962 level.

<sup>1</sup> Preliminary. <sup>2</sup> Intentions.

Business investment in the present year is expected to increase by about five per cent. This compares with the four per cent growth rate recorded in 1962. The largest expansion in capital outlays will be in new facilities for power generation and gas distribution where an increase of about 30 per cent is indicated. Significantly expanded programmes are planned by the manufacturing industry and in the transportation and communication sector. The largest single increase in manufacturing investment can be expected in the paper industry for the expansion of newsprint and pulp making facilities. Smaller, but still important, increases in spending are planned by chemical companies and by capital goods producing industries. All major equipment producing groups plan expanded investment programmes in 1963. Several factors account for the higher level of capital spending in the transportation and communication field. Work on the rapid transit systems in two of Canada's major cities is being accelerated, the pipe line building programmes will be stepped up, additional telegraph facilities are being installed and larger deliveries of commercial aircraft are expected. Outlays for oil and gas well development also will be higher in 1963.

Partially offsetting the expanded investment programme in the foregoing areas are reductions of capital spending plans in some areas of mining and for new office buildings. The major decline anticipated in the mining industry will occur in the field of iron ore development with one very large project now nearing completion. Some decline in the rate of spending is also expected in asbestos and potash mining.

While spending for social capital facilities in Canada in 1963 is expected to increase by about five per cent, the rate of increase is much less than in 1962 when such spending rose by 13 per cent. The slower growth rate is attributable mainly to the fact that the large federally-supported programme of technical school construction has passed its peak phase. On the other hand, there will be a significant increase in the building of new hospital and university facilities and in outlays for roads, streets, water systems and other improvements by provincial and municipal governments.

#### The Programme by Type

Present plans suggest that expenditures both for new structures and for the acquisition of machinery and equipment will increase in 1963. Outlays for construction are expected to total more than \$6 billion, four per cent above the previous record of last year. The machinery programme is likely to involve expenditures in excess of \$3 billion slightly above those of 1957 the previous record year, and five per cent above the outlays of 1962.

	Capita	al Expend	litures	Per Cent Distribution				
Type <sup>1</sup>	1961	1962	1963	1961	1962	1963		
TO DO TO THE STORE OF STORES	Milli	ons of dol	lars	Per Cent				
Housing	1,467	1,587	1,571	17.9	18.2	17.3		
Non-Residential Construction	4,051	4,255	4,489	49.6	48.7	49.4		
Total Construction	5,518	5,842	6,060	67.5	66.9	66.7		
Machinery and Equipment	2,654	2,896	3,028	32.5	33.1	33.3		
Total Capital Expenditures	8, 172	8,738	9, 088	100.0	100.0	100.0		

<sup>1</sup> More detail on the construction programme by type, together with other related data, will be presented in the Dominion Bureau of Statistics report "Construction in Canada – 1961-1963" to be published later.

In 1963 there will be greater emphasis on construction of an engineering type. Expenditures for hydro-electric structures and for pipe lines will be sharply higher. Substantial increases are planned for railway and urban transit facilities and for telegraph systems. Highway, bridge and street construction is also expected to show a significant rise in the present year. Plans for non-residential building construction, on the other hand, involve a little lower level of activity in 1963. Rising outlays for hospital and university buildings will be more than offset by a declining rate of activity in industrial and office building construction.

The present estimates provide for a housebuilding programme in 1963 little different from that of last year. In 1962 there were 130,000 new housing units started and close to 127,000 completed. The number of new units started may be a little less in the present year, but, with a larger carryover of uncompleted houses going into 1963 the number of completions should be about maintained. In terms of dollar value of work put in place this would involve a slight decline, possibly about one per cent from the 1962 total.

The added strenght in machinery purchases in 1963 is expected to be in industrial machinery and heavy electrical equipment. The demand for pulp and paper making machinery and for equipment used in chemical processing should be particularly strong and account for most of the additional strength in industrial machinery. A higher level of spending for equipment used in electric power generation and for communications will mean an increased demand for heavy electrical equipment. Partly offsetting the increase expected in these areas will be a lower level of demand for mining machinery. Expenditures for other types of machinery and equipment are likely to be only moderately different from those of last year. In the field of transportation equipment reduced outlays for railway rolling stock are offset by increases for commercial aircraft.

#### **Repair Expenditures**

In addition to the \$9.1 billion planned for capital purposes, outlays of about \$3.2 billion are expected to be made for the repair of existing facilities.

Expenditures for the repair of structures are likely to total \$1,548 million, bringing total outlays for construction, both new and repair, to \$7.6 billion or about four per cent above similar expenditures made last year. Similarly, outlays for the repair of existing machinery and the purchase of new machinery, in total, are expected to amount to close to \$4.7 billion, three per cent more than in 1962.

#### The Programme by Regions

The most pronounced changes expected in capital expenditures in 1963 on a regional basis occur in the most easterly and the most westerly provinces. Capital outlays in New-foundland are likely to be 26 per cent lower than in 1962 while those in British Columbia are expected to increase by 21 per cent. Sharp year-to-year fluctuations in capital outlays within any one province are often associated with the changing phases of a few large projects. The near completion of a major iron ore development in Labrador accounts for much of the reduction in capital spending in Newfoundland. The sharp increase in British Columbia is associated with a substantially larger electric power programme and a higher level of investment in the paper industry.

Moderate increases in spending, of the order of three to five per cent, are anticipated in the Maritime Provinces, Central Canada and the Prairies but within these regions there is some variation among individual provinces. Expenditures in New Brunswick, Manitoba and Quebec are likely to show a rate of increase above the national average. In New Brunswick a sharply higher rate of spending for new newsprint and pulp making facilities is planned. Increased spending for power facilities, for institutions and for government financed improvements account for the relatively greater strength in Manitoba. The increased strength in Quebec is spread over a wider range with larger investment programmes planned in manufacturing, transportation, institutions and for government facilities. The level of capital spending in the other provinces will show relatively little change from that of 1962.

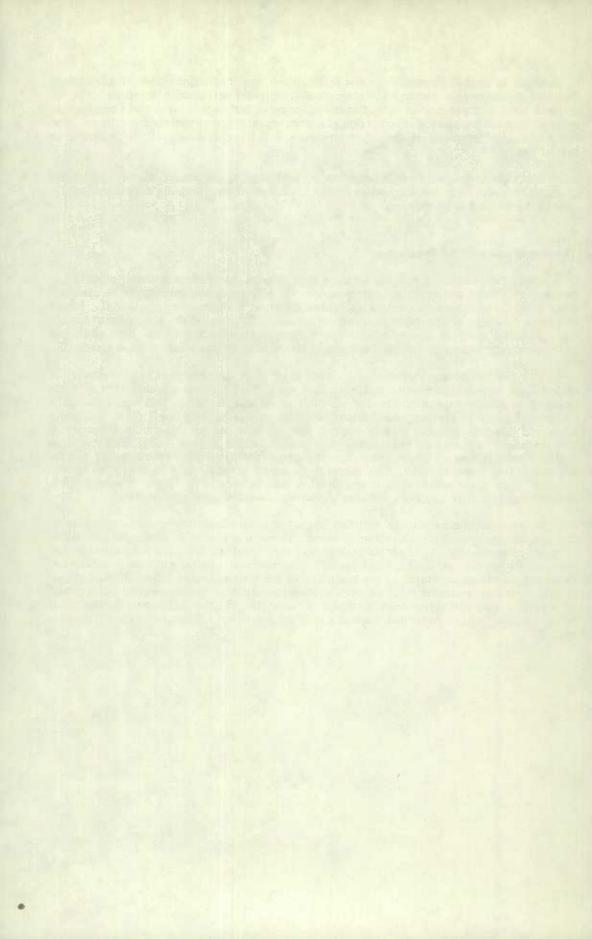

The 1963 estimates given for the smaller provinces, in particular, are very tentative. Changes in plans by a few companies or the initiation of new projects may significantly change the estimates given here.

#### The Significance of the Programme

Capital expenditures account for more than 20 per cent of gross national product and consequently exert and important effect on general activity in the economy. The size and make-up of the programme provide a useful indication of the demands for materials, labour and funds likely to be generated in its accomplishment. In addition the statement of investment plans for the year ahead reflects how businessmen view the future, particularly as to the adequacy of present productive capacity in relation to expected future demands.

The capital programme outlined for 1963 involves a four per cent increase over the 'record total of capital spending achieved last year. This reflects the intention of businessmen to further expand and modernize their production facilities and suggests continuing confidence in the business outlook. The accomplishment of these plans will mean increased demands for both on-site construction workers and for construction materials. The increased emphasis on engineering construction, which is less labour intensive than building construction, may mean that the rate of increase in labour requirements will be somewhat less than in 1962. The increased demand for materials is likely to evolve principally on those items used in engineering construction. The rising demand for materials chinery should ensure another good year in Canada's capital goods industries.

The capital programme, as outlined, represents the stated investment intentions of the various sectors of the Canadian economy. These plans may be changed, i.e. either enlarged or contracted, as the year progresses, as a result of factors not foreseen at the time of the survey. In three of the last six years actual capital outlays in total have exceeded intentions as stated at the beginning of the year and have fallen short of stated intentions in the remaining three years. The average variation between actual outlays and intentions in this period has been about 2.4 per cent. In 1962 the preliminary estimates of actual capital outlays exceeded the early-year forecasts by 1.7 per cent. (See Table 11, page 23).

## TABLE 8. Business and Other, Canada, 1961 to 19631

(Millions of Dollars)

<sup>1</sup> Actual expenditures 1961, preliminary actual 1962, intentions 1963.
 <sup>2</sup> Includes expenditures in agriculture, fishing, forestry, mining, manufacturing, the construction industry, rental housing, trade, finance and commercial services.
 <sup>3</sup> Includes expenditures in owner-occupied housing, institutional services and government departments.

#### SECTION III. DEFINITIONS, COVERAGE AND COMPARATIVE SUMMARY

#### Definitions

The purpose of this report is to set out the anticipated gross expenditures on durable physical assets, both new and repair, of the whole Canadian economy. These comprise in general the facilities and tools used to produce goods and services.

Housing is not generally considered a capital expenditure in the sense mentioned above, but it has been included in this report because it forms a large proportion of construction expenditures and has cyclical fluctuations similar to those which characterize business, institutional and government capital expenditures.

The main emphasis of the report is on capital rather than repair expenditures. New capital expenditures include the cost of procuring, constructing and installing new durable plant and machinery, whether for replacement of worn or obsolete assets, or as net additions to existing assets. Included are all costs charged to capital account, such as architectural, legal and engineering fees, as well as the value of work on capital assets undertaken by the firm with its own labour force. Gross outlays are reported, without any deduction for scrap or trade-in value of old assets. Excluded are expenditures made for the acquisition of previously existing structures, for used machinery and equipment and for land, since outlays of this type involve only the transfer of property and not the creation of a capital asset.

The intention is to include the cost of all new plant and equipment which normally has a life of more than one year. For this reason, companies were asked to report, as capital expenditures, all purchases charged to fixed assets account. This method of reporting omits certain types of equipment which are bought regularly out of ordinary revenue and charged to current account. Adjustments have been made where necessary to take account of such omitted capital items and separate figures are shown in the relevant tables under "capital items charged to operating expenses".

Repair expenditures represent outlays made to maintain the operating efficiency of the existing stock of durable physical assets. Major repair costs which materially lengthen the expected serviceable life of the assets or raise its productivity are treated as part of capital expenditures. Excluded also are costs for the routine care of assets such as cleaning and oiling of machinery.

#### Reconciliation between Private and Public Investment and "Gross Fixed Business Capital Formation" as per National Accounts.

New capital investment as shown in this report covers all capital outlays by both private groups and government authorities on durable physical assets. This coverage is therefore somewhat greater than the "new construction and new machinery and equipment" figures included as a component of Business Gross Fixed Capital Formation, published in the National Accounts. Generally speaking, the National Accounts series includes only expenditures of organizations whose principal source of revenue is from the sale of goods or services to the public together with new privately initiated residential construction and government rental housing. This excludes the items listed in the footnote to Table 9, the largest of which is direct government department outlays. All these items are included under government expenditures for goods and services in the National Accounts.

A reconciliation between private and public new investment and "new construction and new machinery and equipment" as used in the National Accounts is shown in Table 9.

		Housing	Other Construc- tion	Machinery and Equipment	Total

#### TABLE 9. Reconciliation with National Accounts Investment (Millions of Dollars)

<sup>1</sup> In addition to government built, non-rental housing, this category consists of expenditures for provincial hospitals, provincial and municipal schools and those outlays made directly by government departments.

#### Coverage

Estimates for most of the sectors covered in this report are based on questionnaire surveys. Government expenditure figures are based on a direct survey of municipal, provincial and federal departments or agencies. The per cent coverage in each of these surveys is given in Table 10. Those groups for which independent estimates were made are listed in the table with a blank in the per cent column.

The total coverage of the survey may be expressed in several ways. Actually reported expenditures account for 79.6 per cent of total outlays in those groups covered by direct survey and for 76.8 per cent of total estimated expenditures in all sectors. The estimates of total outlays in the groups covered by survey, amounting to 90 per cent of all spending, are thought to be of a better quality than the remaining 10 per cent which represent independent estimates based on much less complete information.

The figures in the various tables of this report are estimates of total expenditures. In order to approximate full coverage for Canada, adjustments were made to allow for those finns which did not report. In manufacturing, the method used to inflate the reported expenditures was to multiply the known expenditures by a factor obtained by dividing the total value of shipments in 1960 of all the firms in each industry by the corresponding 1960 total for the firms reporting in the 1963 survey. In carrying out this procedure it has been assumed that the proportion of shipments of the reporting establishments in both 1960 and 1963 has not changed significantly during the period and further that there is a close relationship between total value of shipments and capital investment. In the utilities, trade, finance and institutional and commercial services sectors the same principle has been followed using appropriate basic data for the sector concerned. Expenditures reported by establishments for which no production or other basic data are available are included as "net additions". Since reporting firms accounted for 76.8 per cent of the total, it is believed that the estimating procedure for the non-reporting firms and the sectors not covered by direct survey, amounting to 23.2 per cent, does not introduce any great margin of error into the total. Estimates for individual industries or regions are, of course, subject to greater error than the total figures for Canada.

Coverage is calculated by expressing expenditures of reporting firms as a percentage of total estimated expendi-

Coverage is calculated by expression of expenditures in this group.
 Independent estimates were made of expenditures in this group.
 In manufacturing and primary industries only establishments having a gross value of shipments of over \$200,000 were analysed in entirety. Thus, coverage is apt to be lower for groups where there are a large number of small companies such as forestry and wood products.
 Coverage for residential housing is calculated by expressing public and privately initiated housing covered by survey as a percentage of total estimated completions.
 This group comprises several categories of commercial services not covered by direct surveys.

Both the 1962 preliminary actual expenditures and the 1963 forecast expenditures were reported by business establishments on the same questionnaire form. With the reported figures covering both years coming from the same group of establishments and with the estimating techniques for non-reporting firms the same for each year, the percentage change from 1962 to 1963 can be calculated with more precision than the absolute magnitude of expenditures in the two years.

#### **Comparison of 1962 Realizations with Intentions**

In considering the accuracy of investment intentions, two separate factors should be kept in mind. First, it is necessary to consider the extent to which investment plans are formulated in advance. Second, consideration ought to be given to the comparison of anticipated investment expenditures with the actual investment statistics once they are available for the period in question.

So far as the first point is concerned, it should be noted that it is not always easy to obtain reliable data on the future plans of business firms. Some firms do not decide upon their complete investment programme at the beginning of the year and are unable to state their intentions precisely. Generally however, new investment expenditures, particularly those on structures and large installations, need previous planning and preparation and most firms are able to give a good estimate of expected outlays. In addition, the seasonal character of construction in Canada frequently means that early decisions must be made regarding capital spending plans for the year ahead.

In considering how closely statements of intentions compare with actual realization, it should be kept in mind that the figures given for 1963 represent the capital expenditure intentions of businessmen and others at the time the surveys are made. These intentions may change for a variety of reasons as the year progresses. Changes in the general business outlook may make it desirable to either modify or expand investment spending, changing price trends may result in revision of cost estimates, and shortages of materials or labour and unfavourable weather may retard progress on projects. In addition, individual businesses have different planning periods and in some cases plans are kept flexible as a matter of policy.

The table on the following page provides a comparison of the 1962 capital expenditure intentions as of January 1962, the revised capital expenditure intentions as of June 1962, and preliminary estimate of realizations as of now. The present estimate of capital outlays for 1962 is 1.7% above the original intentions and 0.5% below the revised intentions. Construction expenditures decreased 0.3% from the original estimate and 1.3% from the revised; machinery and equipment increased by 5.6% and 1.3%.

In considering this comparison it should be kept in mind that the 1962 preliminary actual figures are still subject to further revision as more accurate information becomes available. The 1961 preliminary actual figures published last year have been revised and changes have been incorporated in the 1961 actual figures.

#### TABLE 11. Comparison of Intended With Realized Expenditure in 1962 (Millions of Dollars)

<sup>1</sup> As of January 1962

<sup>3</sup> Revision is based on results of mid-1962 partial survey of those firms reporting expenditures at commencement of year.

<sup>3</sup> Preliminary figure.

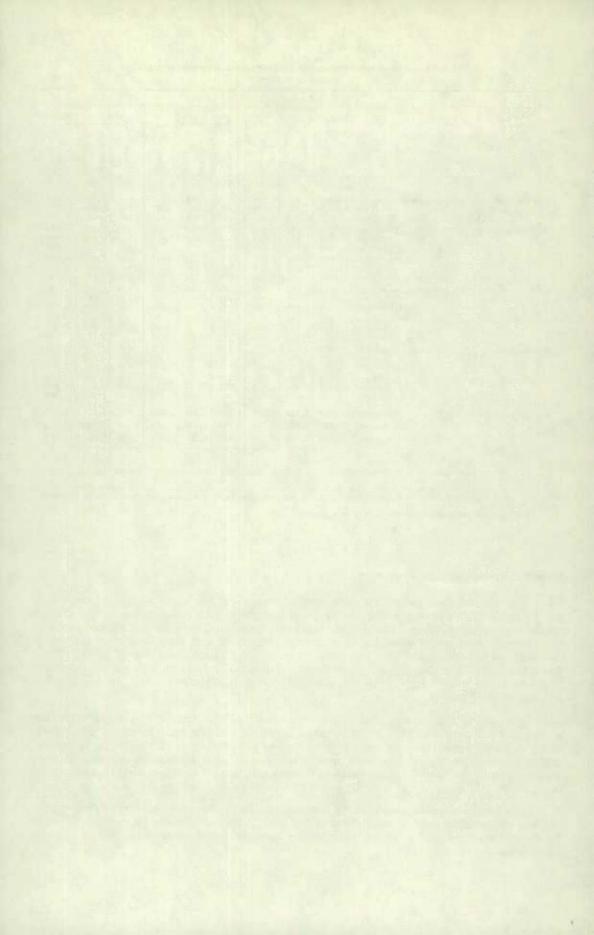

Freelminary figure.
 Firms reporting in the mid-year survey were not asked to re-examine repair expenditures, as past experience revealed relatively small changes in this type of expenditure. Mid-year estimates are therefore a repeat of figures reported at the be-ginning of the year.
 <sup>5</sup> Construction industry not surveyed at mid-year review.

#### **Capital Expenditures by Provinces**

The expenditures shown for each province represent the value of construction work put in place in the province and the value of machinery and equipment acquired for use within the province. Such expenditures represent gross additions to the capital stock of the province, and are a reflection of economic activity in that area. However, the actual production of these assets may generate its major employment and income given effects in other regions. For example, the spending of millions of dollars on western oil refineries and pipe lines means activity in the steel industries in Ontario as well as construction activity in the Prairies.

It should be appreciated that there are statistical difficulties in making a precise geographic allocation of past or anticipated investment since many business firms operating in several provinces do not either record or plan their capital expenditures geographically. As a result, it has been necessary to use approximate breakdowns in many cases. Such is the case for investment in railway rolling stock, ships, aircraft and certain other items.

The degree of detail provided in Tables 13 to 26 is dependent to some extent on the validity of methods used to obtain provincial estimates and also on limitations imposed by the "Statistics Act". These restrictions have particular relevance in the case of smaller provinces.
