**MID-YEAR REVIEW 1959**

The June survey of capital expenditure intentions of Canadian business, institutions, governments and housebuilders reveals that, in total, 1959 spending intentions now involve outlays of more than \$8.5 billion. This represents a significant increase from the \$8.3 billion planned at the beginning of the year. The accomplishment of these intentions would mean that investment spending in 1959 will surpass the \$8.4 billion of last year.

Spending plans for both non-residential construction and the acquisition of machinery and equipment have been revised upwards from those formulated previously. Outlays for both these purposes are now expected to exceed similar expenditures made last year. The non-residential construction programme is two per cent above the 1958 level and that for machinery acquisition four per cent greater. Housebuilding activity is still expected to be moderately below the levels of 1958 and the decline here partly offsets the expected increase in other types of construction. Nevertheless, it is now anticipated that new construction outlays, in total, will approximate \$6 billion. This would be the largest construction programme on record, slightly surpassing the previous peak achieved in 1958.

The major upward revision from the January intentions occurs in business investment where plans now call for capital spending to about equal the levels of 1958. This represents a significant expansion from the programme previously planned. Plans for social capital spending have been little changed from those outlined at the beginning of the year and still involve outlays about four per cent above those of last year.

All major categories of business investment have revised their capital programmes upwards from those stated last January. In the forest and mineral products group greater strength than previously is being shown by the wood, paper products and primary iron and steel industries. The upward revision in this group, as a whole, however, was insufficient to bring its spending back to the 1958 levels. Similarly in the fuel and power group the 1959 programme is still expected to be significantly below that of last year but an expansion of the investment plans of electric and gas utilities and pipe line companies has modified the extent of the decline. In all other areas of business investment present spending intentions involve increases over the 1958 levels and these increases offset the declines still anticipated in the resource oriented industries. The greatest additional strength is expected in commercial building, particularly for office buildings and shopping centres, in agriculture and in the communications industry.

In the area of housing and social capital, only the spending intentions of institutions have been revised. Here expanded plans for university and hospital buildings have resulted in a somewhat larger programme. As previously, the housing estimate assumes that starts will be considerably below the 165,000 of 1958, and that completions will moderately exceed last year's 147,000. Developments, to date, suggest that a decline of 3 per cent in housing outlays continues to be a realistic estimate. Capital spending by all levels of government is still expected to be about nine per cent above the 1958 levels.

On the whole, the results of the mid-year survey of investment intentions reflect increasing business confidence. More new projects are being initiated than was the case in 1958. Where business establishments have revised their investment plans these revisions have been preponderantly in an upward direction. Respondents in the mid-year survey were asked to outline the reasons for any changes in investment plans. The most frequent reason given for expanding a capital programme was that the longer run sales outlook had improved. The principal area of difficulty reported was in the cost and availability of external financing. However, relatively few firms had reduced or postponed their programmes for this reason.

In summary, the accomplishment of present investment plans will mean that construction activity will reach record heights in 1959 and that spending for machinery and equipment will reverse the downward trend evident last year. While the year-over-year increase planned in capital spending is fairly modest the realization of the programme outlined will involve a substantial increase over the rate of activity in the first quarter. It may be expected that capital expenditures will exert a strong expansive influence on the economy in the latter part of the year.

<sup>1</sup> Estimates for repair expenditures in past years showed relatively little change between the original forecast survey and the mid-year review survey. As a result establishments included in the mid-year sample survey were not asked to re-examine their original estimates of repair expenditures. Therefore the estimates for repair expenditures are as reported in the earlier survey at the beginning of the year.

Original forecast.

Revised forecast - capital expenditures.

Not surveyed on mid-year review.

TABLE 2. Manufacturing, Canada  
(Millions of Dollars)
