THE GENERAL WHOLESALE PRICE INDEX
AND EIGHT COMPONENT GROUPS

MONTHLY, JANUARY 1949-JULY 1955
(1935-39=100)

CONSUMER PRICE INDEXES
TOTAL AND GROUPS

MONTHLY, JANUARY 1949-JULY 1955
1949=100

NOTES ON PRICE INDEX NUMBERSTHE CONSUMER PRICE INDEX
(1949 = 100)

The Consumer Price Index remained almost unchanged between June 1 and July 2, moving from 115.9 to 116.0, as slight increases in Food and Shelter indexes were partially offset by declines in the Household Operation and Other Commodities and Services series. The Food component increased from 111.0 to 111.5 under the influence of a sharp increase in the price for eggs and somewhat higher prices for most fresh fruits and vegetables and meats. Decreases were registered by potatoes, tea, and coffee. The Clothing index remained unchanged at 107.8 as most items registered no change, and the few changes balanced each other. Decreases in prices of household appliances and, to a lesser degree, furniture prices, were mainly responsible for the decline in the Household Operation index from 116.1 to 115.8. Coal prices were up fractionally while electricity rates declined slightly. The index of Other Commodities and Services moved from 117.8 to 117.7 as increases in haircuts and some drug items were outweighed by decreases in radios and toilet soaps. The increase in the Shelter index from 129.2 to 129.6 resulted from small increases in both rent and home-ownership costs.

WHOLESALE PRICE INDEXES
(1935-1939 = 100)

The General Wholesale Price Index declined 0.1 per cent from 218.7 for June to 218.4 for July. Three of the eight major groups declined, four advanced and one remained unchanged. Animal Products dropped 1.1 per cent to 227.9 largely due to decreases in cured meats, livestock with the exception of steers, fresh meats with the exception of steer carcass, and lard. Eggs, fowl, steers and steer carcass, butter, raw furs and tallow showed price increases. Vegetable Products declined 0.4 per cent to 195.8 as decreases in grains, potatoes, canned vegetables, green cocoa beans and cocoa products, coffee beans, livestock and poultry feeds, miscellaneous vegetable products, canned fruits, raw sugar and malt outweighed increases in raw rubber, vegetable oils, onions and fresh imported fruits. Chemicals and Allied Products receded 0.1 per cent to 176.4 as decreases in inorganic chemicals and industrial gases overbalanced an increase in the organic chemical sub-group. Non-ferrous Metals advanced 0.3 per cent to 185.0 in response to higher prices for zinc, aluminum, silver, tin and solder. Increases in the prices of fir lumber and timber, spruce lumber, cedar shingles, and newsprint and wood pulp for export moved the Wood, Wood Products and Paper group up 0.2 per cent to 295.2. Non-metallic Minerals advanced 0.2 per cent to 173.7 when increases in coal, coke and sulphur prices proved more important than a small decrease in crude oil. Iron and Its Products advanced 0.1 per cent to 217.5 due to increases in pig iron and galvanized sheets. Increases in raw cotton, cotton yarns and miscellaneous fibre products balanced decreases in cotton knit goods and imported raw wool to leave the index for Fibres, Textiles and Textile Products unchanged at 226.9.

Canadian Farm Product prices at terminal markets decreased 1.1 per cent, from 212.2 to 209.8, between June and July. Field Products dropped 2.5 per cent to 170.0 due to substantial decreases in Eastern potatoes and grains and lesser decreases in hay and Western potatoes and grains. Animal Products dropped 0.2 per cent to 249.5 when decreases in calves, hogs and lambs outweighed increases in eggs, steers, poultry and Eastern cheese milk.

Residential Building Material prices moved up 0.3 per cent to 284.2. Spruce lumber, cedar shingles and metal weatherstripping advanced, more than offsetting declines in some electrical fixtures.

The index for Non-residential Building Material prices on the base 1949 - 100 advanced 0.2 per cent to 122.3. Increases were registered by spruce and pine lumber, electrical conduit, galvanized sheets and rubber tile.

SECURITY PRICE INDEXES
(1935-1939 = 100)

Common stocks reached a new high level again in July as the Investors' Index for 99 issues climbed to 246.5 from 237.1 in June. The rate of increase accelerated during the past twelve months as indicated by an index change of 35.2 per cent compared to 13.4 per cent over the preceding twelve months. Between June and July the index for 78 Industrials moved from 244.4 to 252.8; that for 14 Utilities from 202.9 to 208.9 and for 7 Banks from 243.3 to 270.6.

July indexes were firmer for all sub-groups. Groups showing the greatest increases were Milling, Power and Traction, Foods and Allied Products and Machinery and Equipment.

Mining stocks moved to a higher level in July also as the composite index moved to 125.7 from 121.5 in June. A slight weakening in the index for 22 gold issues from 75.9 to 75.0 was offset by increases in 5 base metals which rose 15.8 points from 226.0 for June to 241.8 for July.

Preferred Stocks again edged upwards in July to reach 179.5 as against 177.9 in June.

SUMMARY OF CURRENT PRICE MOVEMENTSTABLE 1. - WHOLESALE PRICE INDEXES (1935-39=100)

Note: 1955 Wholesale Price Indexes are subject to revision.

Explanation of Methods Used and Additional Sources for Price SeriesAppearing in this BulletinPRICES AND PRICE INDEXES, 1949-1952 (VOLUME 23)

This report, which covers in a comprehensive manner prices and price indexes over the four year period 1949-1952, has, in addition, considerable historical data. In this respect more complete records have been shown for the first time for the Consumer Price Index on the base 1949 = 100 and the Wholesale Price Index on the base 1935-1939 = 100.

Interested users may obtain a copy by writing to the Dominion Statistician. There is a charge of \$1.50 per copy.

WHOLESALE PRICE INDEXESCanadian Farm Products

Wheat prices used in this index are buying prices of Canadian Wheat Board, for Nos. 1, 2 and 3, Manitoba Northern at Fort William-Port Arthur. The initial payment price is first used and revised as further payments are announced.

For the crop year 1953-1954, the initial price for No. 1 of \$1.40 was used until November 1954, when the index was revised for the crop year on the basis of a price of \$1.50 as announced November 6, 1954. Final payments were announced May 19, 1955 and the price for No. 1 Manitoba Northern, for example, was adjusted from \$1.50 to \$1.563 per bushel. For the crop year 1954-55, the index is based on an initial payment of \$1.40 for No. 1, and is subject to revision.

Commencing August 1, 1949, western oats and barley were brought under control of the Canadian Wheat Board. Prices used for Canadian farm products since that time have been initial payments to farmers with participation payments included whenever they are announced. Final payments for the 1953-54 crop year were announced October 12, 1954 for barley, and October 29, 1954 for oats. Interim payments for the 1954-55 crop year were announced March 14, 1955 for barley, and March 18, 1955 for oats.

The Residential Building Materials Price Index (1935-1939 = 100)

This index, which was first published in 1949, was developed to meet the need for a measurement of the price change of that part of housing costs represented by materials. In addition to the composite index which measures the price change of all materials used in residential construction, price indexes are published for nine component material groups. The weights for individual material items and groups of items within the index were based on the estimated material requirement for a national housing target for the year 1946, and the index was calculated on the base 1935-1939 = 100. However, to facilitate comparisons of its movements with those of the new non-residential series, Table 6 shows it arithmetically converted to the base 1949 = 100. Additional information concerning this index may be found in the special bulletin "Price Index Numbers of Residential Building Materials, 1926 to 1948", obtainable for 10 cents on request to the Dominion Statistician.

The Non-Residential Building Materials Price Index (1949 = 100)

A second special purpose price index related to the construction industry titled "Non-Residential Building Materials Price Index" is shown in Table 7. This index has been constructed specifically to measure the price change of materials used in non-residential building construction. It supplements a price index applicable to materials used in residential construction which has been available for some years. The new index has been constructed on the base 1949=100, using weights obtained from data on cost of building materials provided by general and trade contractors for a sample of buildings constructed in Canada during the years 1948-1950.

The methods of constructing the index are explained in some detail in D.B.S. Reference Paper No. 43, entitled "Non-Residential Building Materials Price Index, 1935-1952", which was released on August 21, 1953 and which is available for the sum of 25 cents on request to the Dominion Statistician. This publication also comments on the uses and limitations of the index, and provides the total index by years from 1935 to 1952, and by months for the period January 1949-July 1953. Price indexes for twelve principal component material groups have been calculated by months from January 1949 to July 1953 and these indexes are also contained in the above mentioned publication.

RETAIL PRICE INDEXES

Consumer Price Index

The Consumer Price Index was constructed to replace the Cost-of-Living Index and was first published October 23, 1952.

While the Consumer Price Index is an entirely new index constructed from post-war expenditure patterns, it serves the same purpose as the Cost-of-Living Index. That is, it measures the average percentage change in retail prices of goods and services bought by a large and representative group of Canadian urban families. The change in title was made to clarify the fact that the index is a measure of price change and is not affected by changes in standards of living.

In a special report entitled "The Consumer Price Index, January 1949-August 1952,"* the Bureau published an explanation of the construction of the new index and a record of its movements from January 1949 to August 1952. This report contains detailed information on such aspects of the new index as purpose, family coverage, base period, and details of items included as well as their relative importance. It also gives the formula used in calculating the index, outlines methods of price collection and explains special features of the index, such as the methods of incorporating seasonal variations in food consumption, and changes in the price element of home-ownership costs.

Nineteen forty-nine was selected as a reference level or base period for the Consumer Price Index for a variety of reasons. It is the most satisfactory post-war reference year, not only for price index comparisons, but also for other economic indicators. In addition, prices during 1949 were relatively stable. Dating from the termination of World War II there has been a steady shift of interest from pre-war to post-war comparisons in all fields of economic activity. Conditions have changed greatly since 1935-1939 and concern with things as they existed at that time has steadily declined. These circumstances are similar to those which led to the abandonment of 1900, 1913, and 1926 as base periods.

The index is based on goods and services reported purchased during the year ending August 31, 1948 by 1,517 families, representing all Canadian families with the following characteristics: (a) living in 27 Canadian cities with over 30,000 population; (b) ranging in size from two adults to two adults with four children; (c) with annual incomes during the survey year ranging from \$1,650 to \$4,050.

To measure the influence of price change on the cost of goods and services purchased by such families, the Consumer Price Index contains 224 items.

Consumer Price Indexes for Regional Cities: Consumer Price Indexes are published monthly in this bulletin for the following cities or city combinations: St. John's, Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Saskatoon-Regina, Edmonton-Calgary and Vancouver. With the exception of the index for St. John's, Newfoundland, which is constructed on the base June 1, 1951 = 100, all indexes are on the base 1949 = 100. The regional indexes with the exception of the one for

* Available in French under the title "L'Indice des Prix à la Consommation Janvier 1949-Août 1952". (These reports obtainable for twenty-five cents each).

St. John's, are patterned after the Consumer Price Index for Canada. They are similar to this index in terms of family coverage, item content and weighting system.

These indexes fulfil the same purpose as the cost-of-living series which they replace, viz.: each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another. This fact may be illustrated by reference to temperature changes occurring in two cities. Suppose that in city A the temperature increases by 20 per cent from Time 1 to Time 2, and that in city B it increases 30 per cent during the same interval. In this instance an index of temperature change for city A would be 120 at Time 2 when Time 1 = 100, and the corresponding index for city B would be 130. From these indexes, it is obviously impossible to say whether or not it is warmer or colder in city A or city B. While the indexes form valid measurements of temperature change, they do not in any way indicate the comparative levels of temperature.

Price Index Numbers of Commodities and Services Used by Farmers: The Index of Commodities and Services used by Farmers is designed to measure the change in retail prices of farm operating costs and farm living costs. It is calculated thrice yearly, viz.: January, April and August, and is on the base 1935-39 = 100. For an explanation of methods of construction and an historical record, please refer to "Price Index Numbers of Commodities and Services Used by Farmers, 1913 to 1948 (Revised 1948)." A special bulletin giving total and group index detail is released subsequent to each pricing date.

SECURITY PRICE INDEXES

Price index numbers of industrial, utility, bank and mining common stocks, and preferred stocks are calculated from Montreal and Toronto exchange quotations. The indexes are designed to reflect weekly and monthly changes of interest to the investor, rather than day-to-day changes of more speculative interest. Individual stock prices are weighted by the number of shares outstanding in January of each year. The list is reviewed completely in January of each year, when new series are introduced and series of declining importance are discontinued. The Investors' Index of 99 Common Stocks and the Mining Stocks Index are based on the average of the Thursday closing prices. The Preferred Stock Index is a monthly average of daily quotations.
