4.
NOTES ON PRICE INDEX NUMBERS

THE CONSUMER PRICE INDEX:
(1949 = 100)

The Consumer Price Index moved from 120.3 to 120.5 between January and February to mark the third month during which it has shown relatively little movement. The February index stands 3.5 per cent above the level of a year ago. The current month changes in group indexes were very slight except for Other Commodities and Services which advanced 0.6 per cent. The Food index moved from 117.1 to 117.2 as numerous slight increases throughout all foods were nearly offset by somewhat larger price decreases in coffee, eggs, lettuce and tomatoes. The only item to register a significant increase was sugar. The Shelter index increased a further 0.1 per cent from 133.6 to 133.8, following small increases in both the rent and home-ownership components. The only group to decline was Clothing which moved from 107.6 to 107.4 as sale prices for women's winter coats and overshoes as well as boy's parkas, outweighed a further increase in the price of men's suits. Household Operation changed from 119.0 to 119.1 as price increases occurred for fuel oil and a number of items of furniture, textiles and utensils. Lower prices were recorded for floor coverings, detergents and floor wax. The increase in Other Commodities and Services from 123.1 to 123.8 resulted from a substantial advance in hospital room rates combined with increases for gasoline, drug and personal care items, and alcoholic beverages.

WHOLESALE PRICE INDEXES:
(1935-1939 = 100)

After recording advances for two consecutive months, the General Wholesale Price Index declined 0.4 per cent between January and February, from 229.4 to 228.4. In February 1956 the index was 222.2. Five of the eight component groups were somewhat higher, but these increases were more than offset by the decreases in the remaining three groups. Non-ferrous Metals showed the largest decline, 3.7 per cent, due to lower prices for domestic electrolytic copper, copper wire, brass sheet, tin ingots and domestic zinc, which moved the index from 189.8 to 182.7. Lower prices for raw rubber, sugar and potatoes outweighed increases in the prices of bread in some centres, Santos green coffee and onions, to move the Vegetable Products group down 1.4 per cent, from 203.5 to 200.7. Wood Products also showed a decline, 0.3 per cent, from 298.8 to 297.9, as a result of slight decreases in the price of fir timber and dimension and cedar shingles; export prices of newsprint and wood pulp were effectively lower, due to the strengthening of the Canadian dollar. The largest increase occurred in the Non-metallic Minerals group where higher prices for coal, crude oil, gasoline, kerosene, fuel oil, asphalt, sand and gravel, moved the index 1.2 per cent, from 187.4 to 189.7. Chemical Products also moved up from 181.8 to 182.5, an increase of 0.4 per cent, as a result of increased prices for commercial borax, some dyeing and tanning materials and ammonium nitrate. There were slight upward movements in Animal Products, Textile Products and Iron Products, of 0.3 per cent for the first two named and 0.2 per cent for the last named. In Animal Products the contributors were: hogs, all fresh and cured pork products and eggs, which outbalanced decreases in steers, calves, lambs and poultry. Higher prices for Australian raw wool, worsted yarns and woollen blankets more than offset decreases in jute bags and grey sheeting to move the Textile Products

from 234.6 to 235.2. The slight increase in Iron Products resulted from advances in the prices of steel plates and steel sheets, which outweighed decreases recorded for scrap iron and steel.

The index of Canadian Farm Product prices at terminal markets receded 0.7 per cent from 211.6 to 210.1 between January and February due to a decline in Field Products. A 2.8 per cent drop for this group, from 166.0 to 161.3, reflected a substantial decline in potatoes coupled with a general downward adjustment in Eastern grains and Western rye and flax. Animal Products showed slight improvement on balance, as the index advanced 0.7 per cent from 257.2 to 259.0. Higher quotations were reported for hogs, eggs, Eastern butterfat and cheesemilk, and Western milk and wool, while prices were lower for the remaining livestock items, Eastern fowl and wool.

Reflecting the above price movements, the Eastern composite index fell 1.8 per cent from 233.3 to 229.0, while the Western index rose 0.7 per cent from 189.9 to 191.2.

Building material prices were almost unchanged in February as the Residential index moved from 293.3 to 293.4 and the Non-residential index, on the base 1949 = 100, from 130.0 to 130.1. Higher quotations in February included sand and gravel, steel pipes and sheets, and bricks. Items with lower prices were structural lumber, copper wire and pipe.

SECURITY PRICE INDEXES
(1935-1939 = 100)

The Investors' Index of 95 common stock prices declined 3.8 per cent between January and February, from 273.7 to 263.2. All major groups moved down as follows: 7 Banks 6.4 per cent, from 289.9 to 271.3; 75 Industrials 3.9 per cent, from 287.3 to 276.0; and 13 Utilities 1.9 per cent from 207.5 to 203.6. Losses among sub-groups were led by a 7.3 per cent drop for Industrial Mines. Building Materials fell 6.4; Pulp and Paper 5.9 and Transportation 5.6 per cent. Two sub-groups showed fractional improvement, viz: Power and Traction, and Food and Allied Products.

Mining stocks were similarly weak as the composite index of 27 issues dropped 5.9 per cent from 129.9 to 122.2. Losses were most prominent in Base Metals where an index decline of 8.5 per cent occurred, from 265.7 to 243.2. The index for 21 Gold stocks receded 1.8 per cent from 70.6 to 69.3.

TABLE 1.- SUMMARY OF CURRENT PRICE INDEXES

r- Revised. 1. Average from July 1955 to June 1956. 2. Average from Sept. 1955 to Aug. 1956.

3. Based on a supplementary calculation linking the new U.K. Index Retail Prices (17 Jan. 1956 = 100) with the interim series (17 June 1947 = 100) formerly published.

4. Basic Materials Index (excl. fuel) for non-food manufacturing industries.

5. All manufactured products other than fuel, food and tobacco. 6. June 1956. 7. Average 1956.

Explanation of Methods Used and Additional Sources for Price SeriesAppearing in this BulletinPRICES AND PRICE INDEXES, 1949-1952 (VOLUME 23)

This report, which covers in a comprehensive manner prices and price indexes over the four year period 1949-1952, has, in addition, considerable historical data. In this respect more complete records have been shown for the first time for the Consumer Price Index on the base 1949 = 100 and the Wholesale Price Index on the base 1935-1939 = 100.

Interested users may obtain a copy by writing to the Dominion Statistician. There is a charge of \$1.50 per copy.

WHOLESALE PRICE INDEXESCanadian Farm Products

Wheat prices used in this index are buying prices of Canadian Wheat Board, for Nos. 1, 2 and 3, Manitoba Northern at Fort William-Port Arthur. The initial payment price is first used and revised as further payments are announced.

For the crop year 1954/55, the initial price for No. 1 of \$1.40 was used until February 1956, when the index was revised for the crop year on the basis of a price of \$1.50 as announced February 2, 1956. Final payments were announced May 22, 1956 when the price for No. 1 Manitoba Northern was adjusted to \$1.65, No. 2 to \$1.61 and No. 3 to \$1.56 and the index revised accordingly. For the crop year 1955/56, the index is based on an initial payment of \$1.40 for No. 1, plus an interim payment of 10 cents announced January 30th, 1957. Indexes subsequent to July 1955 are subject to revision.

Commencing August 1, 1949, western oats and barley were brought under control of the Canadian Wheat Board. Prices used for Canadian farm products since that time have been initial payments to farmers with participation payments included whenever they are announced. Final payments for the 1953-54 crop year were announced October 12, 1954 for barley, and October 29, 1954 for oats. For the 1954-55 crop year final payments were announced November 22, and December 1, respectively. For the 1955-56 crop year final payments were announced November 29 and November 15, respectively.

The Residential Building Materials Price Index (1935-1939 = 100)

This index, which was first published in 1949, was developed to meet the need for a measurement of the price change of that part of housing costs represented by materials. In addition to the composite index which measures the price change of all materials used in residential construction, price indexes are published for nine component material groups. The weights for individual material items and groups of items within the index were based on the estimated material requirement for a national housing target for the year 1946, and the index was calculated on the base 1935-1939 = 100. However, to facilitate comparisons of its movements with those of the new non-residential series, Table 5 shows it arithmetically converted to the base 1949 = 100. Additional information concerning this index may be found in the special bulletin "Price Index Numbers of Residential Building Materials, 1926 to 1948", obtainable for 10 cents on request to the Dominion Statistician.

The Non-Residential Building Materials Price Index (1949 = 100)

A second special purpose price index related to the construction industry titled "Non-Residential Building Materials Price Index" is shown in Table 6. This index has been constructed specifically to measure the price change of materials used in non-residential building construction. It supplements a price index applicable to materials used in residential construction which has been available for some years. The new index has been constructed on the base 1949=100, using weights obtained from data on cost of building materials provided by general and trade contractors for a sample of buildings constructed in Canada during the years 1948-1950.

The methods of constructing the index are explained in some detail in D.B.S. Reference Paper No. 43, entitled "Non-Residential Building Materials Price Index, 1935-1952", which was released on August 21, 1953 and which is available for the sum of 25 cents on request to the Dominion Statistician. This publication also comments on the uses and limitations of the index, and provides the total index by years from 1935 to 1952, and by months for the period January 1949-July 1953. Price indexes for twelve principal component material groups have been calculated by months from January 1949 to July 1953 and these indexes are also contained in the above mentioned publication.

RETAIL PRICE INDEXES

Consumer Price Index

The Consumer Price Index was constructed to replace the Cost-of-Living Index and was first published October 23, 1952.

While the Consumer Price Index is an entirely new index constructed from post-war expenditure patterns, it serves the same purpose as the Cost-of-Living Index. That is, it measures the average percentage change in retail prices of goods and services bought by a large and representative group of Canadian urban families. The change in title was made to clarify the fact that the index is a measure of price change and is not affected by changes in standards of living.

In a special report entitled "The Consumer Price Index, January 1949-August 1952",* the Bureau published an explanation of the construction of the new index and a record of its movements from January 1949 to August 1952. This report contains detailed information on such aspects of the new index as purpose, family coverage, base period, and details of items included as well as their relative importance. It also gives the formula used in calculating the index, outlines methods of price collection and explains special features of the index, such as the methods of incorporating seasonal variations in food consumption, and changes in the price element of home-ownership costs.

Nineteen forty-nine was selected as a reference level or base period for the Consumer Price Index for a variety of reasons. It is the most satisfactory post-war reference year, not only for price index comparisons, but also for other economic indicators. In addition, prices during 1949 were relatively stable. Dating from the termination of World War II there has been a steady shift of interest from pre-war to post-war comparisons in all fields of economic activity. Conditions have changed greatly since 1935-1939 and concern with things as they existed at that time has steadily declined. These circumstances are similar to those which led to the abandonment of 1900, 1913, and 1926 as base periods.

The index is based on goods and services reported purchased during the year ending August 31, 1948 by 1,517 families, representing all Canadian families with the following characteristics: (a) living in 27 Canadian cities with over 30,000 population; (b) ranging in size from two adults to two adults with four children; (c) with annual incomes during the survey year ranging from \$1,650 to \$4,050.

To measure the influence of price change on the cost of goods and services purchased by such families, the Consumer Price Index contains 224 items.

Consumer Price Indexes for Regional Cities: Consumer Price Indexes are published monthly in this bulletin for the following cities or city combinations: St. John's, Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Saskatoon-Regina, Edmonton-Calgary and Vancouver. With the exception of the index for St. John's, Newfoundland, which is constructed on the base June 1, 1951 = 100, all indexes are on the base 1949 = 100. The regional indexes with the exception of the one for

* Available in French under the title "L'Indice des Prix à la Consommation Janvier 1949-Août 1952". (These reports obtainable for twenty-five cents each).

St. John's, are patterned after the Consumer Price Index for Canada. They are similar to this index in terms of family coverage, item content and weighting system.

These indexes fulfil the same purpose as the cost-of-living series which they replace, viz.: each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another. This fact may be illustrated by reference to temperature changes occurring in two cities. Suppose that in city A the temperature increases by 20 per cent from Time 1 to Time 2, and that in city B it increases 30 per cent during the same interval. In this instance an index of temperature change for city A would be 120 at Time 2 when Time 1 = 100, and the corresponding index for city B would be 130. From these indexes, it is obviously impossible to say whether or not it is warmer or colder in city A or city B. While the indexes form valid measurements of temperature change, they do not in any way indicate the comparative levels of temperature.

Price Index Numbers of Commodities and Services Used by Farmers: The Index of Commodities and Services used by Farmers is designed to measure the change in retail prices of farm operating costs and farm living costs. It is calculated thrice yearly, viz.: January, April and August, and is on the base 1935-39 = 100. For an explanation of methods of construction and an historical record, please refer to "Price Index Numbers of Commodities and Services Used by Farmers, 1913 to 1948 (Revised 1948)." A special bulletin giving total and group index detail is released subsequent to each pricing date.

SECURITY PRICE INDEXES

Price index numbers of industrial, utility, bank and mining common stocks, and preferred stocks are calculated from Montreal and Toronto exchange quotations. The indexes are designed to reflect weekly and monthly changes of interest to the investor, rather than day-to-day changes of more speculative interest. Individual stock prices are weighted by the number of shares outstanding in January of each year. The list is reviewed completely in January of each year, when new series are introduced and series of declining importance are discontinued. The Investors' Index of 95 Common Stocks and the Mining Stocks Index are based on the average of the Thursday closing prices. The Preferred Stock Index is a monthly average of daily quotations.
