HOUSEHOLD OPERATIONS COMPONENT GROUP INDEX
WITH SELECTED ITEM PRICE RELATIVES

MONTHLY, JANUARY 1951-MARCH 1957

(1949 = 100)

NOTES ON PRICE INDEX NUMBERS

THE CONSUMER PRICE INDEX: The Consumer Price Index remained unchanged at 120.5 (1949=100) between February and March 1957, continuing a period of steadiness dating from November 1956. A year ago

the index stood at 116.4. Current decreases in the Food index were sufficient to offset increases in the other four group indexes. Foods declined from 117.2 to 116.4 as price decreases occurred for margarine, coffee, processed cheese, potatoes, grapefruit and beef. Prices were slightly higher for a number of canned fruits and fresh vegetables. Pork also was somewhat higher and egg prices were up fractionally after reaching the lowest level in two years in February. Small increases in both the rent and home-ownership components moved the Shelter index from 133.8 to 134.0. The Clothing index rose from 107.4 to 108.2 as a result of higher prices for men's and women's wear, footwear and piece goods. An increase in the Household Operation index, from 119.1 to 119.5, reflected price increases for furniture, floor coverings, textiles, utensils and equipment, laundry, dry cleaning and shoe repairs. The Other Commodities and Services index increased from 123.8 to 124.2 as higher prices were reported for automobile repairs and local transportation fares. Gasoline prices increased mainly in Ontario, and tire prices were lower in a number of cities.

WHOLESALE PRICE INDEXES: The General Wholesale Price Index remained unchanged (1935-1939=100) at 228.4 between February and March. In March 1956

the index was 223.3. Five of the eight component groups were somewhat lower but their decreases were offset by gains in two other groups while the eighth remained the same. Animal Products showed the largest decline, 0.9 per cent, which moved the index from 238.4 to 236.3. Lower prices for hogs, fresh and cured pork, sheep and lamb skins, and tallow, outweighed increases for steers, beef carcasses and poultry. Vegetable Products, Iron Products and Chemical Products each declined 0.2 per cent. Lower prices for grains, potatoes, onions, canned tomatoes, tea, coffee, cocoa beans and cocoa butter, moved the Vegetable Products index down from 200.7 to 200.4, negating lesser increases in the prices of sugar, raw rubber, rubber footwear, hay and oranges. In the Iron Products group, although turnings and borings, and pipe, showed an upward trend, decreases in the price of steel scrap eased this group downward from 250.8 to 250.4. Chemical Products index declined from 182.5 to 182.1, as a result of lower prices for shellac, even though bleaching powder and some fertilizers showed upward tendencies. The slight decrease in Non-ferrous Metals of 0.1 per cent resulted from lower prices for copper and copper wire. Higher prices for newsprint more than offset decreases for spruce, cedar and woodpulp to move the Wood Products group higher 1.0 per cent, from 297.9 to 301.0. Textile Products was fractionally higher, 0.1 per cent. In this group the contributors to the higher index were raw wool, worsted yarns and cloth, and wool cloth; prices for raw cotton and cotton yarns were slightly lower. An increase in the price of crude oil was balanced by decreases in the price of sulphur and most coal items, to leave the Non-metallic Minerals group unchanged at 189.7.

The index of Canadian Farm Products at terminal markets declined 1.6 per cent from 210.1 to 206.8 between February and March. The drop mainly

reflected a 2.2 per cent fall in the Animal Products group from 259.0 to 253.4 although the Field Products group weakened also from 161.3 to 160.2. Both Eastern and Western indexes were lower, the changes being 2.0 and 1.0 per cent respectively as the Eastern total index moved down from 229.0 to 224.4 and the Western total index from 191.2 to 189.2. In total Animal Products sharply lower prices for hogs, combined with smaller declines for Western lambs and eggs and Eastern calves, outweighed increases for steers and raw wool, Eastern poultry, eggs and lambs and Western calves and fluid milk. In field Products potatoes were generally lower while further declines were registered in the East for wheat, hay, peas, corn and rye and in the West for flax and rye.

The price index of Residential Building Materials changed 0.1 per cent from 293.4 to 293.8 between February and March, reflecting higher prices for a number of items in the Lumber and Roofing Materials groups. Items showing lower quotations included copper wire and shellac.

The Non-residential Building Materials Index, on the base 1949=100, remained unchanged at 130.1 in March. Commodity price changes were scattered as increases occurred in Aggregate, Cement and Concrete Mix, Electrical Equipment and Materials, Lumber and Lumber Products, and Paint and Glass while declines were noted for Plumbing, Heating and Other Equipment.

SECURITY PRICE INDEXES
(1935-1939 = 100)

The Investors' Index of 95 common stocks increased 1.6 per cent between February and March, from 263.2 to 267.5. Among major groups, 13 Utilities advanced 2.8 per cent from 203.6 to 209.2 while 76 Industrials moved up 1.8 per cent from 276.0 to 281.0. On the other hand 7 Banks fell 1.9 per cent from 271.3 to 266.2. Eight of the twelve sub-groups advanced, led by gains of 6.1 per cent for Transportation, 4.5 per cent for Machinery and Equipment and 4.4 per cent for Power and Traction. Four groups declined, with Milling down 4.7 per cent followed by fractional losses for Textiles and Clothing, Telephones and Beverages.

The composite index of 27 mining issues rallied in March also, rising 0.9 per cent from 122.2 to 123.3 as 6 Base Metals rose 2.6 per cent from 243.2 to 249.6 to more than offset a 1.7 per cent decline for 21 Golds from 69.3 to 68.1.

r - Revised. 1. Average from July 1955 to June 1956. 2. Average from Sept. 1955 to Aug. 1956.

3. Based on a supplementary calculation linking the new U.K. Index Retail Prices (17 Jan. 1956 = 100) with the interim series (17 June 1947 = 100) formerly published.

4. Basic Materials Index (excl. fuel) for non-food manufacturing industries.

5. All manufactured products other than fuel, food and tobacco. 6. June 1956. 7. Average 1955.

Appearing in this BulletinWHOLESALE PRICE INDEXESCanadian Farm Products

Wheat prices used in this index are buying prices of Canadian Wheat Board, for Nos. 1, 2 and 3, Manitoba Northern at Fort William-Port Arthur. The initial payment price is first used and revised as further payments are announced.

For the crop year 1954/55, the initial price for No. 1 of \$1.40 was used until February 1956, when the index was revised for the crop year on the basis of a price of \$1.50 as announced February 2, 1956. Final payments were announced May 22, 1956 when the price for No. 1 Manitoba Northern was adjusted to \$1.65, No. 2 to \$1.61 and No. 3 to \$1.56 and the index revised accordingly. For the crop year 1955/56, the index is based on an initial payment of \$1.40 for No. 1, plus an interim payment of 10 cents announced January 30th, 1957. Indexes subsequent to July 1955 are subject to revision.

Commencing August 1, 1949, western oats and barley were brought under control of the Canadian Wheat Board. Prices used for Canadian farm products since that time have been initial payments to farmers with participation payments included whenever they are announced. Final payments for the 1953-54 crop year were announced October 12, 1954 for barley, and October 29, 1954 for oats. For the 1954-55 crop year final payments were announced November 22, and December 1, respectively. For the 1955-56 crop year final payments were announced November 29 and November 15, respectively.

The Residential Building Materials Price Index (1935-1939 = 100)

This index, which was first published in 1949, was developed to meet the need for a measurement of the price change of that part of housing costs represented by materials. In addition to the composite index which measures the price change of all materials used in residential construction, price indexes are published for nine component material groups. The weights for individual material items and groups of items within the index were based on the estimated material requirement for a national housing target for the year 1946, and the index was calculated on the base 1935-1939=100. However, to facilitate comparisons of its movements with those of the new non-residential series, Table 5 shows it arithmetically converted to the base 1949=100. Additional information concerning this index may be found in the special bulletin "Price Index Numbers of Residential Building Materials, 1926 to 1948", obtainable for 10 cents on request to the Dominion Statistician.

The Non-Residential Building Materials Price Index (1949 = 100)

A second special purpose price index related to the construction industry titled "Non-Residential Building Materials Price Index" is shown in Table 6. This index has been constructed specifically to measure the price change of materials used in non-residential building construction. It supplements a price index applicable to materials used in residential construction which has been available for some years. The new index has been constructed on the base 1949=100, using weights obtained from data on cost of building materials provided by general and trade contractors for a sample of buildings constructed in Canada during the years 1948-1950.

The methods of constructing the index are explained in some detail in D.B.S. Reference Paper No. 43, entitled "Non-Residential Building Materials Price Index, 1935-1952", which was released on August 21, 1953 and which is available for the sum of 25 cents on request to the Dominion Statistician. This publication also comments on the uses and limitations of the index, and provides the total index by years from 1935 to 1952, and by months for the period January 1949-July 1953. Price indexes for twelve principal component material groups have been calculated by months from January 1949 to July 1953 and these indexes are also contained in the above mentioned publication.

RETAIL PRICE INDEXES

Consumer Price Index

The Consumer Price Index was constructed to replace the Cost-of-Living Index and was first published October 23, 1952.

While the Consumer Price Index is an entirely new index constructed from post-war expenditure patterns, it serves the same purpose as the Cost-of-Living Index. That is, it measures the average percentage change in retail prices of goods and services bought by a large and representative group of Canadian urban families. The change in title was made to clarify the fact that the index is a measure of price change and is not affected by changes in standards of living.

In a special report entitled "The Consumer Price Index, January 1949-August 1952,"* the Bureau published an explanation of the construction of the new index and a record of its movements from January 1949 to August 1952. This report contains detailed information on such aspects of the new index as purpose, family coverage, base period, and details of items included as well as their relative importance. It also gives the formula used in calculating the index, outlines methods of price collection and explains special features of the index, such as the methods of incorporating seasonal variations in food consumption, and changes in the price element of home-ownership costs.

Nineteen forty-nine was selected as a reference level or base period for the Consumer Price Index for a variety of reasons. It is the most satisfactory post-war reference year, not only for price index comparisons, but also for other economic indicators. In addition, prices during 1949 were relatively stable. Dating from the termination of World War II there has been a steady shift of interest from pre-war to post-war comparisons in all fields of economic activity. Conditions have changed greatly since 1935-1939 and concern with things as they existed at that time has steadily declined. These circumstances are similar to those which led to the abandonment of 1900, 1913, and 1926 as base periods.

The index is based on goods and services reported purchased during the year ending August 31, 1948 by 1,517 families, representing all Canadian families with the following characteristics: (a) living in 27 Canadian cities with over 30,000 population; (b) ranging in size from two adults to two adults with four children; (c) with annual incomes during the survey year ranging from \$1,650 to \$4,050.

To measure the influence of price change on the cost of goods and services purchased by such families, the Consumer Price Index contains 224 items.

Consumer Price Indexes for Regional Cities: Consumer Price Indexes are published monthly in this bulletin for the following cities or city combinations: St. John's, Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Saskatoon-Regina, Edmonton-Calgary and Vancouver. With the exception of the index for St. John's, Newfoundland, which is constructed on the base June 1, 1951 = 100, all indexes are on the base 1949 = 100. The regional indexes with the exception of the one for

* Available in French under the title "L'Indice des Prix à la Consommation Janvier 1949-Août 1952". (These reports obtainable for twenty-five cents each).

St. John's, are patterned after the Consumer Price Index for Canada. They are similar to this index in terms of family coverage, item content and weighting system.

These indexes fulfil the same purpose as the cost-of-living series which they replace, viz.: each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another. This fact may be illustrated by reference to temperature changes occurring in two cities. Suppose that in city A the temperature increases by 20 per cent from Time 1 to Time 2, and that in city B it increases 30 per cent during the same interval. In this instance an index of temperature change for city A would be 120 at Time 2 when Time 1 = 100, and the corresponding index for city B would be 130. From these indexes, it is obviously impossible to say whether or not it is warmer or colder in city A or city B. While the indexes form valid measurements of temperature change, they do not in any way indicate the comparative levels of temperature.

Price Index Numbers of Commodities and Services Used by Farmers: The Index of Commodities and Services used by Farmers is designed to measure the change in retail prices of farm operating costs and farm living costs. It is calculated thrice yearly, viz.: January, April and August, and is on the base 1935-39 = 100. For an explanation of methods of construction and an historical record, please refer to "Price Index Numbers of Commodities and Services Used by Farmers, 1913 to 1948 (Revised 1948)." A special bulletin giving total and group index detail is released subsequent to each pricing date.

SECURITY PRICE INDEXES

Price index numbers of industrial, utility, bank and mining common stocks, and preferred stocks are calculated from Montreal and Toronto exchange quotations. The indexes are designed to reflect weekly and monthly changes of interest to the investor, rather than day-to-day changes of more speculative interest. Individual stock prices are weighted by the number of shares outstanding in January of each year. The list is reviewed completely in January of each year, when new series are introduced and series of declining importance are discontinued. The Investors' Index of 95 Common Stocks and the Mining Stocks Index are based on the average of the Thursday closing prices. The Preferred Stock Index is a monthly average of daily quotations.
