NOTES ON PRICES AND PRICE INDEX NUMBERS

GENERAL WHOLESALE INDEX:
(1935 - 1939 = 100)

The General Wholesale Index increased fractionally by 0.1 per cent between June and July, moving from 230.7 to 231.0. The index stands 1.6 per cent higher than the July 1958 index of 227.3. Only two of the major groups showed an upward movement, while four declined. The remaining two were unchanged.

The Animal Products group recorded the largest upward movement in the month under review as the index advanced 1.8 per cent from 252.0 to 257.1. Hides and skins, lard and tallow, and eggs were the chief contributors to the group increase, while lesser advances were recorded for fresh meats, livestock, and leather. The Non-metallic Minerals group rose 0.4 per cent from 185.3 to 186.0 as a result of higher prices for cement, coal and coke.

Lower prices for copper and its products, and tin caused a 1.1 per cent decline in the Non-ferrous Metals group from 174.8 to 172.8. The Vegetable Products group declined 0.5 per cent from 200.0 to 199.0 mainly on account of lower prices recorded by fresh fruits, vegetable oils and products, tea, coffee and cocoa, and raw sugar. Fractionally lower movements occurred in the Chemical Products and Textile Products groups.

Indexes for the Wood Products group and the Iron Products group were unchanged.

The following table shows some of the more noteworthy changes:

Commodity Group or Sub-group	Per cent Change July 1959 over June 1959
Animal Products Group	+ 1.8
Hides and skins	+ 8.4
Lard and tallow	+ 6.1
Eggs	+ 5.8
Fresh Meats	+ 2.5
Livestock	+ 2.1
Leather	+ 2.0
Fowl, dressed	- 5.4
Non-metallic Minerals Group	+ 0.4
Cement	+ 3.2
Coal	+ 1.0
Coke	+ 0.7
Non-ferrous Metals Group	- 1.1
Copper and its products	- 3.4
Tin	- 1.0
Vegetable Products Group	- 0.5
Sugar, raw	- 4.3
Fruits, fresh	- 3.6
Vegetable oils and products	- 2.3
Tea, coffee and cocoa	- 1.6
Potatoes	+ 1.8
Vegetables, canned	+ 0.8
Fruits, dried	+ 0.8

THE CONSUMER PRICE INDEX:
(1949 = 100)

The Consumer Price Index was unchanged at 125.9 between June and July 1959 and stood 1 per cent above the July 1958 level of 124.7. In the current period, a drop in the Other Commodities and Services index balanced increases in the Food, Shelter, Clothing, and Household Operation indexes.

Further sharp declines in gasoline prices combined with seasonally lower prices for new passenger cars resulted in a 0.4 per cent decrease in the Other Commodities and Services index, from 135.4 to 134.9. Higher prices for prepaid health care occurred in the Maritime Provinces.

The Food index was up 0.1 per cent from 119.1 to 119.2 as both increases and decreases, mostly fractional in nature, occurred on a wide range of items. Significant price changes were limited to potatoes and grapefruit. Beef and pork prices were quite steady.

Small increases in both the rent and home-ownership components moved the Shelter index up 0.1 per cent from 141.5 to 141.7. An increase of 0.5 per cent in the Clothing index, from 109.2 to 109.7, reflected prices up from previous sale price levels for a number of items, including men's suits and coats and children's shoes.

The Household Operation index rose 0.2 per cent from 122.5 to 122.7 as a result of minor price increases on a variety of items, including household utensils and equipment, supplies, household help, domestic gas, and electricity. Household appliances showed mixed results with gas stoves and electric refrigerators up and electric stoves, washing machines, and vacuum cleaners at lower price levels.

TABLE 4. - WHOLESALE PRICES OF SELECTED COMMODITIES
(All prices given in Canadian Funds)

Commodity	Unit	Yearly Average 1958	July 1958	June 1959	July 1959
		\$	\$	\$	\$
VEGETABLE PRODUCTS					
Barley, No. 1 feed	bu.	.93	.96	.93	.91
Coffee beans, Green Santos 2/3's	lb.	.51	.49	.38	.36
Flour, first patent, Toronto	100-lb. bag	5.88	5.90	6.15	6.15
Linseed oil, raw, Montreal	gal.	1.30	1.49	1.29	1.29
Oats, No. 2 C.W.	bu.	.778	.832	.763	.761
Potatoes, No. 1 Saint John	75-lb. bag	1.715	1.850	3.062	3.300
Sugar, granulated, standard, Montreal ...	100-lb. bag	7.66	7.38	7.03	7.03
Wheat, No. 2, Manitoba Northern	bu.	1.60	1.59	1.64	1.64
ANIMAL PRODUCTS					
Butter, prints, 1st. grade, Montreal	lb.	.64	.64	.65	.64
Eggs, grade "A", large, Montreal	doz.	.53	.56	.46	.50
Hides, packer, light native steers	lb.	.150	.135	.262	.275
Hogs, Toronto (bonus excluded)	100-lb.	28.44	31.46	24.40	24.49
Steers, good, Toronto	100-lb.	23.20	23.00	24.53	25.21
TEXTILE PRODUCTS					
Cotton, raw, middling, 1", New York	lb.	.351	.351	.346	.332
Cotton yarn, 10's, white	lb.	.70	.70	.70	.70
Cotton, grey Osnaburg, clean, 7 1/8 oz. .	yd.	.34	.34	.34	.34
Rayon yarn, 36 filament, 150 denier	lb.	.88	.87	.89	.89
Wool, raw, Australian, 64's, clean	lb.	1.22	1.22	1.20	1.31
Wool, raw, Eastern, domestic	lb.	.40	.41	.39	.41
WOOD PRODUCTS					
Newspaper paper, standard, Quebec	2000-lb. ton	113.06	111.83	111.83	111.57
Pine, white, No. 1, 1" x 8", 8'-16'	1000-bd. ft.	180.00	180.00	187.00	187.00
Shingles, asphalt, 12" x 13"	100 sq. ft.	8.16	8.30	7.74	6.50
Spruce, merchantable, 1" x 6"-7"	1000 bd. ft.	84.83	84.50	85.50	85.50
IRON PRODUCTS					
Cast iron scrap	2240-lb. ton	46.66	45.00	50.00	50.00
Steel scrap, heavy melting, No. 1 1/2	2240-lb. ton	-	-	33.26	33.26
Pig iron, foundry, silicon 2.01-2.25	2240-lb. ton	65.00	65.00	65.00	65.00
NON-FERROUS METALS					
Copper, electrolytic, domestic	100-lb.	25.43	24.16	30.25	29.23
Lead, pig, electrolytic, domestic	100-lb.	11.33	10.75	10.25	10.25
Tin, ingots, 99.8%, Montreal	lb.	.97	.96	1.06	1.05
Zinc, high grade, electrolytic	100-lb.	10.89	10.60	11.85	11.85
NON-METALLIC MINERALS					
Cement, Portland, Calgary	350-lb.	3.05	3.04	3.19	3.19
Cement, Portland, Toronto	350-lb.	3.44	3.44	2.90	3.26
Coal, anthracite, U.S., stove size	2000-lb. ton	20.59	19.88	19.76	20.10
Gasoline, regular grade, Montreal	gal.	.226	.226	.223	.223
Gasoline, regular grade, Toronto	gal.	.228	.228	.223	.223
Gasoline, regular grade, Winnipeg	gal.	.224	.226	.223	.223
CHEMICALS					
Sodium carbonate (Soda Ash) 58 p.c.	100-lb.	2.45	2.44	2.51	2.51
Sulphuric acid, 66° Baume	2000-lb. ton	25.35	23.35	25.35	25.35

1/ New price series introduced in January 1959.

TABLE 5. - PRICE INDEX NUMBERS OF RESIDENTIAL BUILDING MATERIALS

(1935-39 = 100)

- PRINCIPAL COMPONENTS -

Date	Total Index* (1949=100)	Cement, Total Index	Sand and Gravel	Brick, Tile and Stone	Lumber and Its Pro- ducts	Lath, Plaster and Insula- tion	Roof- ing Mate- rials	Paint and Glass	Plumb- ing Heat- ing Equip- ment	Elec- trical Equip- ment and Fix- tures	Other Mater- ials
1926	48.1	109.6	105.5	103.2	110.9	101.4	104.3	156.8	110.2	91.6	112.0

Note:- Weekly Wages in Current Dollars relate to the last pay periods in the month, while the Consumer Price Index relates to the beginning of the month. In calculating Weekly Wages in 1949 Dollars, the Weekly Wages in Current Dollars for any month are therefore adjusted by the Consumer Price Index for the following month as being more representative of the period in which the wages are spent. A statement of uses and limitations of the adjusted figures appears on page 32.

Explanation of Methods Used and Additional Sources for Price Series
Appearing in this Bulletin

WHOLESALE PRICE INDEXES

Canadian Farm Products

Wheat prices used in this index are buying prices of the Canadian Wheat Board, for Nos. 1, 2 and 3, Manitoba Northern at Fort William-Port Arthur. The initial payment price is first used and revised as further payments are announced.

Final wheat participation payments for the crop year August 1957 - July 1958 were announced June 5, 1959. The price of No. 1 Manitoba Northern was adjusted to \$1.619, No. 2 to \$1.584 and No. 3 to \$1.496 and the indexes revised accordingly. Subsequent monthly indexes are based on an initial payment of \$1.40 for No. 1 Manitoba Northern.

Commencing August 1, 1949, Western oats and barley were brought under control of the Canadian Wheat Board. Prices used for Canadian Farm Products since that time have been initial payments to farmers, with participation payments included whenever they are announced. For the crop year 1957-1958 final payments were announced March 30, 1959 which brought the price to \$.891 per bushel for No. 1 Feed barley and \$.673 for No. 2 C.W. oats. Initial payments for the crop year 1958-1959 are 87 cents for No. 1 Feed barley and 60 cents for No. 2 C.W. oats.

For final revised indexes August 1945 - July 1952 see Prices and Price Indexes, May 1953, Table 21; and Table 4 of February 1954, May 1955, May 1956, May 1957 and May 1958 issues for subsequent crop years. Table 2, page 6 of this issue presents final indexes for 1957-1958. Indexes subsequent to July 1958 are subject to revision.

The Residential Building Materials Price Index (1935-1939=100)

This index, which was first published in 1949, was developed to meet the need for a measurement of the price change of that part of housing costs represented by materials. In addition to the composite index which measures the price change of all materials used in residential construction, price indexes are published for nine component material groups. The weights for individual material items and groups of items within the index were based on the estimated material requirement for a national housing target for the year 1946, and the index was calculated on the base 1935-1939=100. However, to facilitate comparisons of its movements with those of the new non-residential series, table 5 shows it arithmetically converted to the base 1949=100. Additional information concerning this index may be found in the special bulletin "Price Index Numbers of Residential Building Materials, 1926 to 1948", obtainable for 10 cents on request to the Dominion Statistician.

The Non-Residential Building Materials Price Index (1949=100)

A second special purpose price index related to the construction industry titled "Non-Residential Building Materials Price Index" is shown in Table 6. This index has been constructed specifically to measure the price change of materials used in non-residential building construction. It supplements a price index applicable to materials used in residential construction which has been available for some years. The new index has been constructed on the base 1949=100, using weights obtained from data on cost of building materials provided by general and trade contractors for a sample of buildings constructed in Canada during the years 1948-1950.

The methods of constructing the index are explained in some detail in D.B.S. Reference Paper No. 43, entitled "Non-Residential Building Materials Price Index, 1935-1952", which was released on August 21, 1953 and which is available for the sum of 25 cents on request to the Dominion Statistician. This publication also comments on the uses and limitations of the index, and provides the total index by years from 1935 to 1952, and by months for the period January 1949-July 1953. Price indexes for twelve principal component material groups have been calculated by months from January 1949 to July 1953 and these indexes are also contained in the above mentioned publication.

RETAIL PRICE INDEXES

Consumer Price Index

The Consumer Price Index was constructed to replace the Cost-of-Living Index and was first published October 23, 1952.

While the Consumer Price Index is an entirely new index constructed from post-war expenditure patterns, it serves the same purpose as the Cost-of-Living Index. That is, it measures the average percentage change in retail prices of goods and services bought by a large and representative group of Canadian urban families. The change in title was made to clarify the fact that the index is a measure of price change and is not affected by changes in standards of living.

In a special report entitled "The Consumer Price Index, January 1949-August 1952,"* the Bureau published an explanation of the construction of the new index and a record of its movements from January 1949 to August 1952. This report contains detailed information on such aspects of the new index as purpose, family coverage, base period, and details of items included as well as their relative importance. It also gives the formula used in calculating the index, outlines methods of price collection and explains special features of the index, such as the methods of incorporating seasonal variations in food consumption, and changes in the price element of home-ownership costs.

Nineteen forty-nine was selected as a reference level or base period for the Consumer Price Index for a variety of reasons. It is the most satisfactory post-war reference year, not only for price index comparisons, but also for other economic indicators. In addition, prices during 1949 were relatively stable. Dating from the termination of World War II there has been a steady shift of interest from pre-war to post-war comparisons in all fields of economic activity. Conditions have changed greatly since 1935-1939 and concern with things as they existed at that time has steadily declined. These circumstances are similar to those which led to the abandonment of 1900, 1913, and 1926 as base periods.

The index is based on goods and services reported purchased during the year ending August 31, 1948 by 1,517 families, representing all Canadian families with the following characteristics: (a) living in 27 Canadian cities with over 30,000 population; (b) ranging in size from two adults to two adults with four children; (c) with annual incomes during the survey year ranging from \$1,650 to \$4,050.

To measure the influence of price change on the cost of goods and services purchased by such families, the Consumer Price Index contains 224 items.

Consumer Price Indexes for Regional Cities: Consumer Price Indexes are published monthly in this bulletin for the following cities or city combinations: St. John's, Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Saskatoon-Regina, Edmonton-Calgary and Vancouver. With the exception of the index for St. John's, Newfoundland, which is constructed on the base June 1, 1951 = 100, all indexes are on the base 1949 = 100. The regional indexes with the exception of the one for

* Available in French under the title "L'Indice des Prix à la Consommation Janvier 1949-Août 1952". (These reports obtainable for twenty-five cents each).

St. John's, are patterned after the Consumer Price Index for Canada. They are similar to this index in terms of family coverage, item content and weighting system.

These indexes fulfil the same purpose as the cost-of-living series which they replace, viz.: each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another. This fact may be illustrated by reference to temperature changes occurring in two cities. Suppose that in city A the temperature increases by 20 per cent from Time 1 to Time 2, and that in city B it increases 30 per cent during the same interval. In this instance an index of temperature change for city A would be 120 at Time 2 when Time 1 = 100, and the corresponding index for city B would be 130. From these indexes, it is obviously impossible to say whether or not it is warmer or colder in city A or city B. While the indexes form valid measurements of temperature change, they do not in any way indicate the comparative levels of temperature.

Price Index Numbers of Commodities and Services Used by Farmers: The Index of Commodities and Services used by Farmers is designed to measure the change in retail prices of farm operating costs and farm living costs. It is calculated thrice yearly, viz.: January, April and August, and is on the base 1935-39 = 100. For an explanation of methods of construction and an historical record, please refer to "Price Index Numbers of Commodities and Services Used by Farmers, 1913 to 1948 (Revised 1948)." A special bulletin giving total and group index detail is released subsequent to each pricing date.

SECURITY PRICE INDEXES

Price index numbers of industrial, utility, bank and mining common stocks, and preferred stocks are calculated from Montreal and Toronto exchange quotations. The indexes are designed to reflect weekly and monthly changes of interest to the investor, rather than day-to-day changes of more speculative interest. Individual stock prices are weighted by the number of shares outstanding in January of each year. The list is reviewed completely in January of each year, when new series are introduced and series of declining importance are discontinued. The Investors' Index of 92 Common Stocks and the Mining Stocks Index are based on the average of the Thursday closing prices. The Preferred Stock Index is a monthly average of daily quotations.

MEASURING THE PURCHASING POWER OF EARNINGS

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels had remained constant. The following illustration shows how this kind of adjustment can be made.

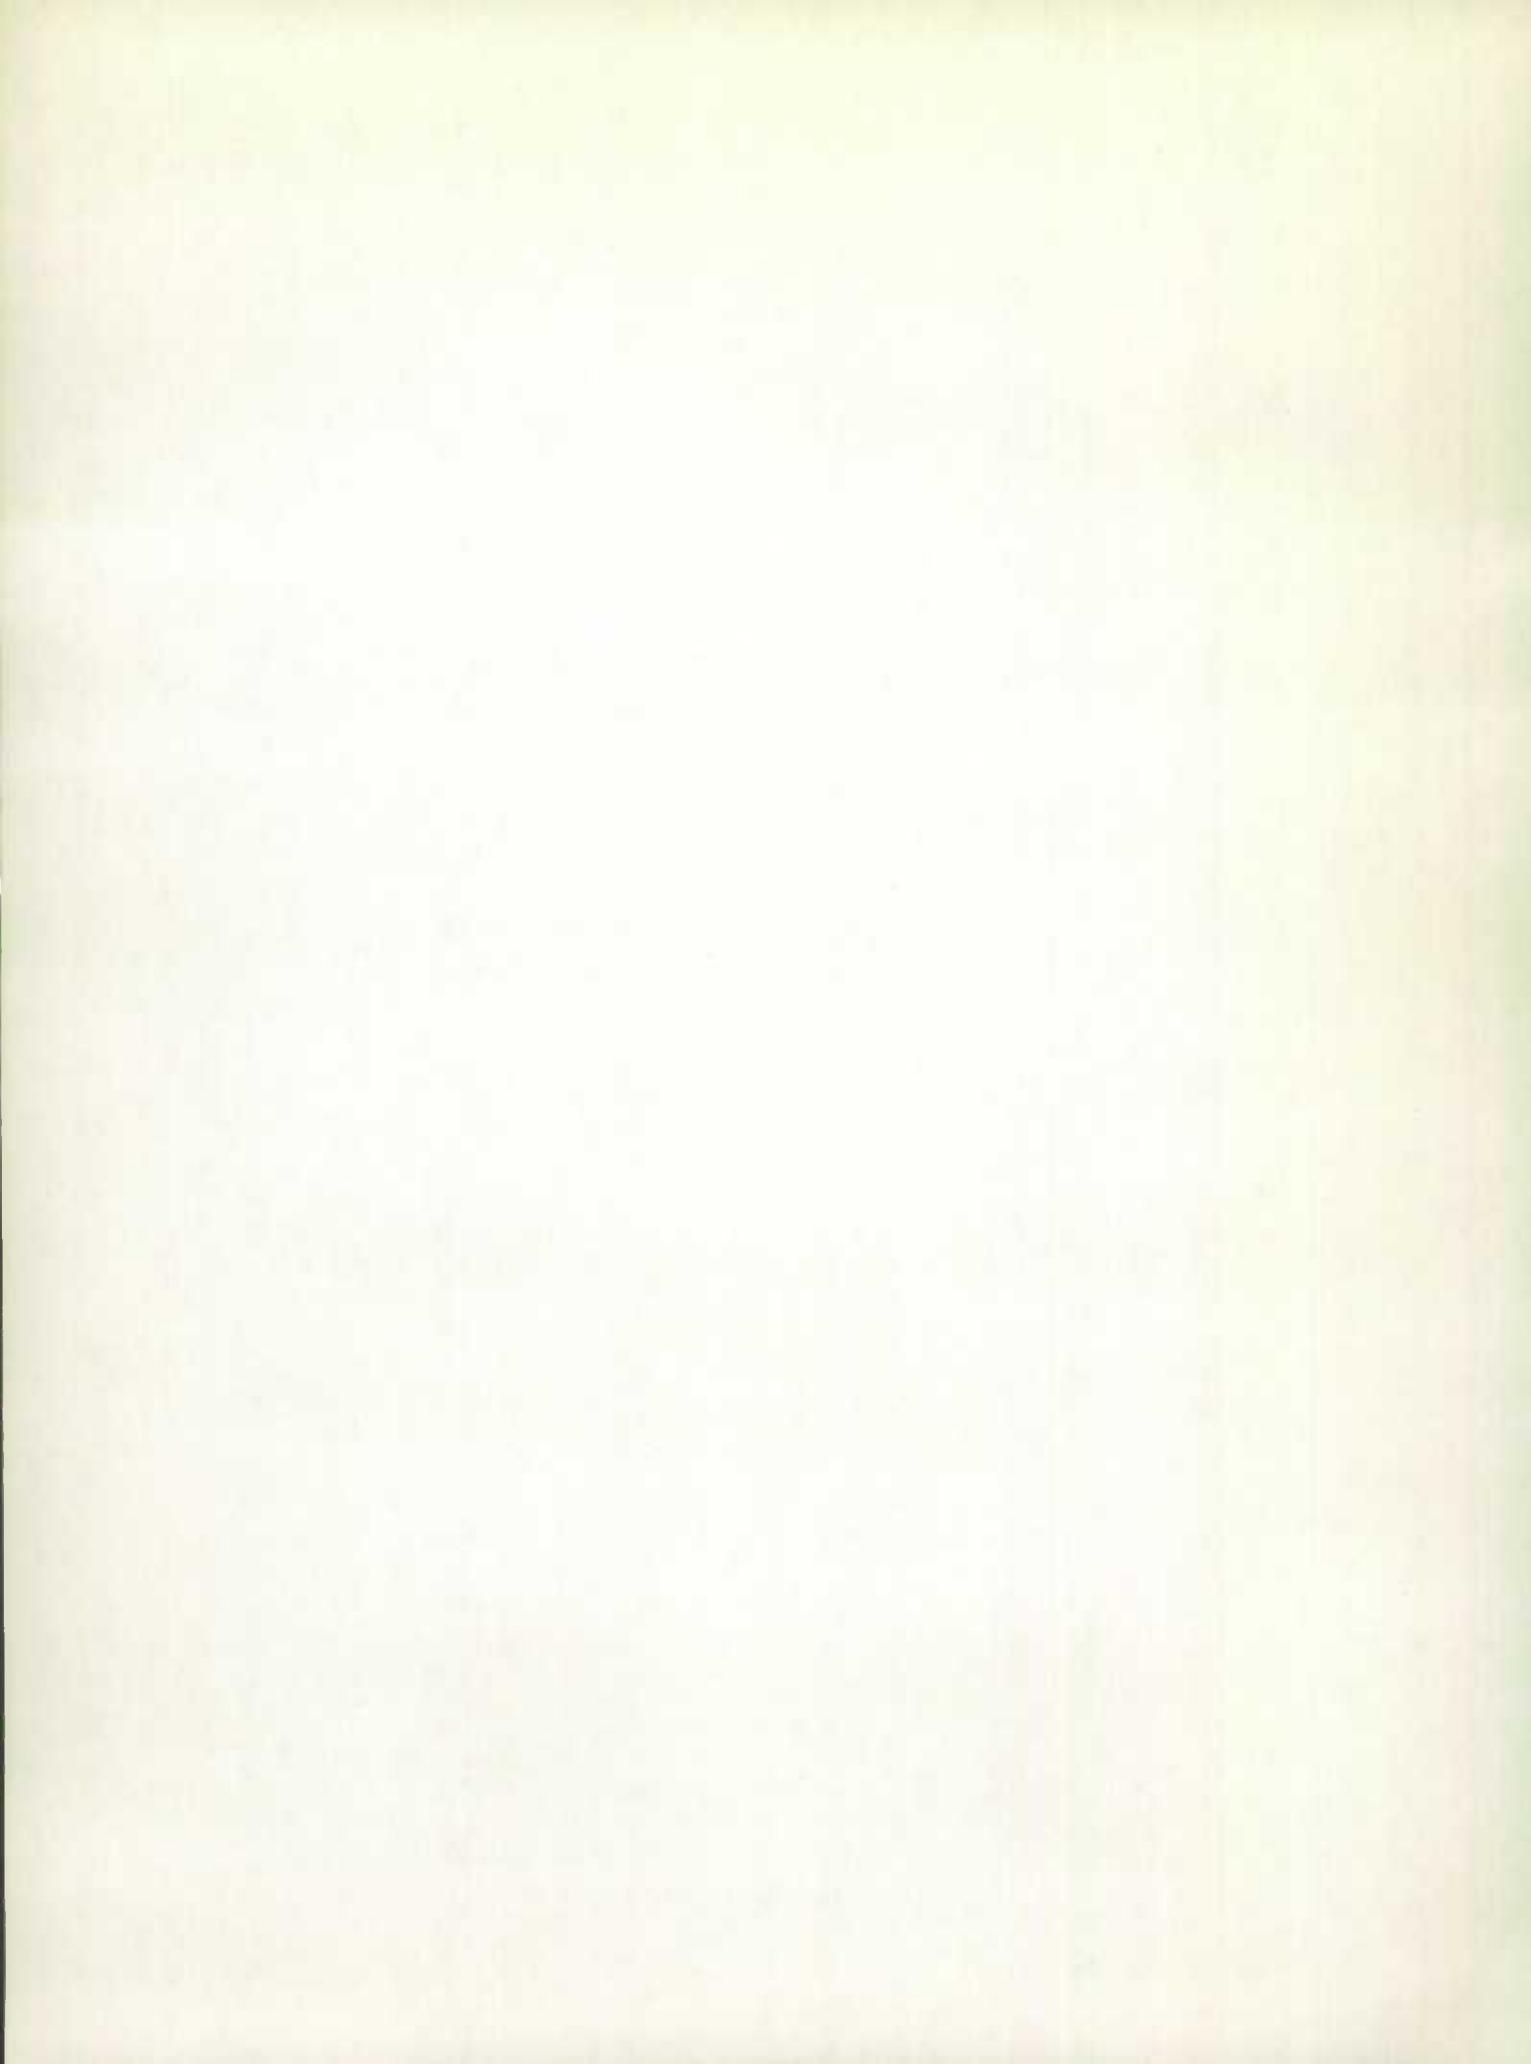

Suppose that a series of weekly average wages rises from \$50.00 in week A to \$60.00 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 per cent rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, the 20 per cent rise from \$50.00 to \$60.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$60.00 by the amount of the consumer price increase. An adjusted average of \$55.00 ($\$60.00/110.0 \times 100.0$), may be referred to as a weekly wage average for week B, expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$50.00 and the week B figure of \$55.00. Taking the week A average of \$50.00 as equal to 100.0, the week B index becomes 110.0 ($\$55.00/50.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 10 per cent more goods and services than those received in week A, in spite of a 10 per cent rise in consumer prices. This 10 per cent increase in real wages compares with the rise of 20 per cent in money wages ($\$60.00/50.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experience of broad groups of workers fairly well, their applicability to individual wage earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or the sex of the wage earner. Moreover, individual spending habits differ widely, while the consumer price index which is used to adjust the earnings data is based on the average consumption pattern of a large group of urban population. Also, group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid. Finally, some part of income is saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using a price which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Neither do they take into account other family income, or changes in the savings position of families. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index.

In Table 11, Page 24, figures for 1949 are used as reference levels for indexes of both actual and real wages, since this is the year selected by the Dominion Bureau of Statistics for general post-war index number comparisons. However, the adjustment made in the foregoing illustration can be applied to any reference level, and it should not be inferred that the 1949 reference period has any special validity for earnings comparisons. Percentage change between any two periods will be the same regardless of the reference period selected.
