NOTES ON PRICES AND PRICE INDEX NUMBERS

GENERAL WHOLESALE INDEX: The General Wholesale Index eased down by 0.2 per cent in February, from 230.5 (1935 - 1939 = 100) to 230.0. Two major groups were lower, while four advanced. The remaining two groups, Iron Products and Non-metallic Minerals, were unchanged.

The Animal Products group recorded its fifth consecutive decline and moved 1.5 per cent lower from 246.4 to 242.6 during the month under review and 6.2 per cent between September 1959 and February. The decrease in this group, which was the main reason for the downward movement in the General Wholesale Index in February, was largely attributable to lower prices for dressed fowl, fresh and cured meats, hides and skins, and livestock. The Textile Products group, showed a lesser decline of 0.3 per cent from 229.2 to 228.5 as a result of lower prices for imported raw wool, and worsted yarns.

Higher prices for copper and its products, and tin, caused the Non-ferrous Metals group to rise 1.0 per cent from 176.5 to 178.2. Price increases for explosives, and fertilizer materials offset lower prices for tanning and dyeing materials causing the Chemical Products group to move 0.3 per cent higher from 187.8 to 188.3. The Wood Products group and the Vegetable Products group were just noticeably higher, while Iron Products and Non-metallic Minerals remained unchanged.

The following table shows some of the more noteworthy changes:

<u>COMMODITY GROUP OR SUB-GROUP</u>	<u>PERCENTAGE CHANGES</u>		
	<u>February 1960</u>		<u>February 1960</u>
	<u>January 1960</u>	<u>February 1959</u>	
Animal Products Group	- 1.5	- 5.1	
Fowl, dressed	- 5.3	+ 10.2	
Meats, fresh	- 4.5	- 13.5	
Hides and skins	- 4.2	+ 5.1	
Livestock	- 3.4	- 11.9	
Meats, cured	- 2.9	- 11.5	
Eggs	+ 11.2	- 19.3	
Furs	+ 8.9	+ 11.0	
Lard	+ 4.3	- 5.3	
Textile Products Group	- 0.3	+ 0.4	
Wool, raw, imported	- 8.2	+ 21.8	
Yarns, worsted	- 1.2	+ 7.9	
Non-ferrous Metals Group	+ 1.0	+ 2.2	
Copper and its products	+ 3.1	+ 6.5	
Tin	+ 0.5	- 3.2	
Chemical Products Group	+ 0.3	+ 1.5	
Explosives	+ 4.7	+ 6.4	
Fertilizer materials	+ 0.8	+ 0.2	
Tanning and dyeing materials	- 3.5	- 0.8	

THE CONSUMER PRICE INDEX: The Consumer Price Index declined 0.2 per cent from 127.5 to 127.2 between (1949=100) the beginning of January and February 1960. A year ago the index stood at 125.7.

The current decrease resulted almost entirely from a decline of 0.7 per cent in the Food index combined with a drop of 0.4 per cent in the Clothing index and 0.1 per cent in the Household Operation index. The Shelter and Other Commodities and Services indexes were both up a fractional 0.1 per cent.

The Food index moved from 121.6 to 120.8 as lower prices were reported for a wide range of meats, with price declines in beef ranging up to five cents per pound. Other price declines were limited largely to orange juice, grapefruit and most fats. Egg prices, after dropping some twenty cents per dozen between November 1959 and January 1960, edged slightly lower in February to stand at 41 cents per dozen. Most fresh and canned fruits and vegetables were higher with potato prices, continuing to rise, at their highest February levels since 1952.

The Shelter index rose slightly from 142.8 to 142.9 as the home-ownership component increased slightly while the rent component, unchanged for the fourth successive month, continued its levelling trend apparent over the past year.

A drop of 0.4 per cent in the Clothing index, from 110.2 to 109.8, reflected a further impact of winter sales. Men's, women's and girls' winter overcoats, boys' parkas and girls' snowsuits were mainly affected.

In the Household Operation index, a fractional decline from 123.3 to 123.2 resulted mainly from sale prices in furniture and floor coverings, which more than balanced scattered price increases for some household supplies and utensils, as well as textile prices up from January sale levels.

Price changes in Other Commodities and Services were of a minor nature with somewhat higher prices reported for pharmaceuticals, personal care items and taxi rates, which were partially offset by price declines for gasoline. As a result, the index increased from 136.9 to 137.0.

SPATIAL RETAIL FOOD PRICE INDEXES FOR SELECTED CANADIAN CITIES - 1956, 1957, 1958, 1959.

For some years the Dominion Bureau of Statistics has been investigating the problems of calculating indexes which will indicate, with some precision, the extent of the differences in the average level of retail prices between major Canadian cities. In commodities and services other than food, problems of comparability of items are of major significance and it has not yet been possible to cover these areas of family budgets.

In foods, however, the problem of comparability of items between cities is at a minimum, and it has been possible to calculate indexes which are considered to indicate the extent of the difference in the average level of retail food prices between Winnipeg and 10 other major Canadian cities with sufficient reliability. These have been calculated annually for 1956, 1957, 1958 and 1959, and will be maintained on an annual basis in the future.

These indexes have been calculated on the basis of prices collected in each of the eleven cities, weighted in accordance with average urban food expenditures as contained in the weighting diagram of the Canada Consumer Price Index. Because of the differences in food purchases between cities it is impossible to calculate entirely accurate measurements. The closest approximation would be derived, for example, from the use of both Winnipeg and Vancouver weights in the calculation of the Winnipeg-Vancouver comparison, rather than the use of average urban food expenditures. However, the calculation of a number of indexes using weights relating to each city did not produce indexes significantly different from those which appear in the following table. This reflects the fact that while differences in food purchases exist, the magnitude of the differences in the cities covered is not such as to affect spatial comparisons significantly.

SPATIAL RETAIL FOOD PRICES INDEXES, 1956, 1957, 1958 and 1959.

Winnipeg = 100	<u>1956</u>	<u>1957</u>	<u>1958</u>	<u>1959</u>
Halifax	99	100	99	102
Saint John, N.B.	101	102	100	102
Montreal	98	99	98	98
Ottawa	97	99	98	99
Toronto	97	98	97	97
Winnipeg	100	100	100	100
Regina	104	104	103	105
Saskatoon	105	104	104	105
Calgary	101	101	100	102
Edmonton	100	101	100	101
Vancouver	105	105	104	106

In addition to the problem of weights, the difficulty of obtaining prices for identically the same description of each food item in each city is of some consequence. While considerable care is taken to minimize differences due to variations in quality of the items priced, it is impossible to completely eliminate all such variations. This is particularly true in the case of beef items, where variations in consumption by grades as between cities undoubtedly affect the resultant price comparisons.

While these indexes have been expressed in terms of Winnipeg =100, the selection of Winnipeg as the base city has no significance, and the indexes may be expressed on the base of any of the eleven cities included.

TABLE 1. - SUMMARY OF CURRENT PRICE INDEXES

TABLE 4. - WHOLESALE PRICES OF SELECTED COMMODITIES
(All prices given in Canadian Funds)

Commodity	Unit	Yearly Average 1958	Feb. 1959	Jan. 1960	Feb. 1960
<u>VEGETABLE PRODUCTS</u>					
Barley, No. 1 feed	bu.	.93	.99	.97	.96
Coffee beans, Green Santos 2/3's	lb.	.51	.40	.38	.38
Flour, first patent, Toronto	100-lb. bag	5.88	6.00	6.20	6.20
Linseed Oil, raw, Montreal	gal.	1.30	1.22	1.33	1.24
Oats, No. 2 C.W.	bu.	.778	.788	.842	.826
Potatoes, No. 1 Saint John	75-lb. bag	1.715	1.400	2.688	2.750
Sugar, granulated, standard, Montreal	100-lb. bag	7.66	7.23	6.63	6.88
Wheat, No. 2, Manitoba Northern	bu.	1.60	1.68	1.63	1.63
<u>ANIMAL PRODUCTS</u>					
Butter, prints, 1st. grade, Montreal	lb.	.64	.66	.66	.66
Eggs, grade "A", large, Montreal	doz.	.53	.46	.35	.40
Hides, packer, light native steers	lb.	.150	.198	.212	.210
Hogs, Toronto (bonus excluded)	100-lb.	28.44	24.00	22.29	21.32
Steers, good, Toronto	100-lb.	23.20	25.40	22.77	21.73
<u>TEXTILE PRODUCTS</u>					
Cotton, raw, middling, 1", New York	lb.	.351	.348	.315	.316
Cotton yarn, 10's, white	lb.	.70	.70	.69	.69
Cotton, grey Osnaburg, clean, 7 1/8 oz. ...	yd.	.34	.34	.34	.34
Rayon yarn, 36 filament, 150 denier	lb.	.88	.89	.89	.89
Wool, raw, Australian, 64's, clean	lb.	1.22	1.12	1.20	1.07
Wool, raw, Eastern, domestic	lb.	.40	.32	.42	.42
<u>WOOD PRODUCTS</u>					
Newsprint paper, standard, Quebec	2000-lb. ton	113.06	114.30	111.93	111.75
Pine, white, No. 1, 1" x 8", 8'-16'	1000-bd. ft.	180.00	180.00	187.00	187.00
Shingles, asphalt, 12" x 13"	100 sq. ft.	8.16	8.20	5.84	6.15
Spruce, merchantable, 1" x 6"-7"	1000-bd. ft.	84.83	85.50	85.50	85.50
<u>IRON PRODUCTS</u>					
Cast iron scrap	2240-lb. ton	46.66	48.00	50.00	50.00
Steel scrap, heavy melting, No. 1 1/.....	2240-lb. ton	-	34.17	33.26	33.26
Pig iron, foundry, silicon 2.01-2.25	2240-lb. ton	65.00	65.00	65.00	65.00
<u>NON-FERROUS METALS</u>					
Copper, electrolytic, domestic	100-lb.	25.43	28.95	30.14	30.88
Lead, pig, electrolytic, domestic	100-lb.	11.33	11.15	10.75	10.75
Tin, ingots, 99.8%, Montreal	lb.	.97	1.07	1.02	1.02
Zinc, high grade, electrolytic	100-lb.	10.89	12.05	13.54	13.58
<u>NON-METALLIC MINERALS</u>					
Cement, Portland, Calgary	350-lb.	3.05	3.19	3.19	3.19
Cement, Portland, Toronto	350-lb.	3.44	2.90	3.26	3.26
Coal, anthracite, U.S., stove size	2000-lb. ton	20.59	21.16	20.99	20.99
Gasoline, regular grade, Montreal	gal.	.226	.226	.223	.223
Gasoline, regular grade, Toronto	gal.	.228	.228	.223	.223
Gasoline, regular grade, Winnipeg	gal.	.224	.226	.223	.223
<u>CHEMICALS</u>					
Sodium carbonate (Soda Ash) 58 p.c.	100-lb.	2.45	2.51	2.44	2.51
Sulphuric acid, 66° Baume	2000-lb. ton	25.35	25.35	25.35	25.35

1/ New price series introduced in January 1959.

TABLE 5. - PRICE INDEX NUMBERS OF RESIDENTIAL BUILDING MATERIALS

(1935-39 = 100)

- PRINCIPAL COMPONENTS -

Date	Total Index* (1949=100)	- PRINCIPAL COMPONENTS -									
		Total Index	Cement, Sand and Gravel	Brick, Tile and Stone	Lumber and Its Products	Lath, Plaster and Insula- tion	Roof- ing Mat- erials	Paint and Glass	Plumb- ing and Heat- ing Equip- ment	Elec- trical Equip- ment and Fix- tures	Other Mate- rials
1926	48.1	109.6	105.5	103.2	110.9	101.4	104.3	156.8	110.2	91.6	112.0

December	68.78(p)	164.8(p)	53.95(p)	129.3

Note: - Weekly Wages in Current Dollars relate to the last pay periods in the month, while the Consumer Price Index relates to the beginning of the month. In calculating Weekly Wages in 1949 Dollars, the Weekly Wages in Current Dollars for any month are therefore adjusted by the Consumer Price Index for the following month as being more representative of the period in which the wages are spent. A statement of uses and limitations of the adjusted figures appears on page 33.

(p) Preliminary.

Explanation of Methods Used and Additional Sources for Price SeriesAppearing in this BulletinWHOLESALE PRICE INDEXESCanadian Farm Products

Wheat prices used in this index are buying prices of the Canadian Wheat Board, for Nos. 1, 2 and 3, Manitoba Northern at Fort William-Port Arthur. The initial payment price is first used and revised as further payments are announced.

Final wheat participation payments for the crop year August 1957 - July 1958 were announced June 5, 1959. The price of No. 1 Manitoba Northern was adjusted to \$1.619, No. 2 to \$1.584 and No. 3 to \$1.496 and the indexes revised accordingly. For the crop year 1958-59 the initial payment of \$1.40 for No. 1 Manitoba Northern was increased to \$1.50 as of February 12th, 1960. Subsequent monthly indexes are based on an initial payment of \$1.40.

Commencing August 1, 1949, Western oats and barley were brought under control of the Canadian Wheat Board. Prices used for Canadian Farm Products since that time have been initial payments to farmers, with participation payments included whenever they are announced. For the crop year 1957-1958 final payments were announced March 30, 1959 which brought the price to \$.891 per bushel for No. 1 Feed barley and \$.673 for No. 2 C.W. oats. Initial payments for the crop year 1958-1959 are 87 cents for No. 1 Feed barley and 60 cents for No. 2 C.W. oats.

For final revised indexes August 1945 to July 1952 see Prices and Price Indexes, May 1953, Table 21. For subsequent years see Table 4 of February 1954, May 1955 and 1956, and Table 2 of May 1957, May 1958, and July 1959. Indexes subsequent to July 1958 are subject to revision.

The Non-Residential Building Materials Price Index (1949=100)

A second special purpose price index related to the construction industry entitled "Non-Residential Building Materials Price Index" is shown in Table 6. This index has been constructed specifically to measure the price change of materials used in non-residential building construction. It supplements a price index applicable to materials used in residential construction which has been available for some years. The new index has been constructed on the base 1949=100, using weights obtained from data on cost of building materials provided by general and trade contractors for a sample of buildings constructed in Canada during the years 1948-1950.

The methods of constructing the index are explained in some detail in D.B.S. Reference Paper No. 43, entitled "Non-Residential Building Materials Price Index, 1935-1952", which was released on August 21, 1953 and which is available for the sum of 25 cents on request to the Dominion Statistician. This publication also comments on the uses and limitations of the index, and provides the total index by years from 1935 to 1952, and by months for the period January 1949-July 1953. Price indexes for twelve principal component material groups have been calculated by months from January 1949 to July 1953 and these indexes are also contained in the above mentioned publication.

The Residential Building Materials Price Index (1935-1939=100)

This index, which was first published in 1949, was developed to meet the need for a measurement of the price change of that part of housing costs represented by materials. In addition to the composite index which measures the price change of all materials used in residential construction, price indexes are published for nine component material groups. The weights for individual material items and groups of items within the index were based on the estimated material requirement for a national housing target for the year 1946, and the index was calculated on the base 1935-1939=100. However, to facilitate comparisons of its movements with those of the new non-residential series, table 5 shows it arithmetically converted to the base 1949=100. Additional information concerning this index may be found in the special bulletin "Price Index Numbers of Residential Building Materials, 1926 to 1948", obtainable for 10 cents on request to the Dominion Statistician.

As a first step in a revision program, the structure of the Residential Electrical Equipment and Fixtures index has been revised. Both items priced and weights have been brought into line with latest available data on current building practices. The price reference base will continue as 1935-1939=100. For the new weighting diagram effective from July 1959 see "Prices and Price Indexes, August 1959".

RETAIL PRICE INDEXES

Consumer Price Index

The Consumer Price Index was constructed to replace the Cost-of-Living Index and was first published October 23, 1952.

While the Consumer Price Index is an entirely new index constructed from post-war expenditure patterns, it serves the same purpose as the Cost-of-Living Index. That is, it measures the average percentage change in retail prices of goods and services bought by a large and representative group of Canadian urban families. The change in title was made to clarify the fact that the index is a measure of price change and is not affected by changes in standards of living.

In a special report entitled "The Consumer Price Index, January 1949-August 1952,"* the Bureau published an explanation of the construction of the new index and a record of its movements from January 1949 to August 1952. This report contains detailed information on such aspects of the new index as purpose, family coverage, base period, and details of items included as well as their relative importance. It also gives the formula used in calculating the index, outlines methods of price collection and explains special features of the index, such as the methods of incorporating seasonal variations in food consumption, and changes in the price element of home-ownership costs.

Nineteen forty-nine was selected as a reference level or base period for the Consumer Price Index for a variety of reasons. It is the most satisfactory post-war reference year, not only for price index comparisons, but also for other economic indicators. In addition, prices during 1949 were relatively stable. Dating from the termination of World War II there has been a steady shift of interest from pre-war to post-war comparisons in all fields of economic activity. Conditions have changed greatly since 1935-1939 and concern with things as they existed at that time has steadily declined. These circumstances are similar to those which led to the abandonment of 1900, 1913, and 1926 as base periods.

The index is based on goods and services reported purchased during the year ending August 31, 1948 by 1,517 families, representing all Canadian families with the following characteristics: (a) living in 27 Canadian cities with over 30,000 population; (b) ranging in size from two adults to two adults with four children; (c) with annual incomes during the survey year ranging from \$1,650 to \$4,050.

To measure the influence of price change on the cost of goods and services purchased by such families, the Consumer Price Index contains 224 items.

Consumer Price Indexes for Regional Cities: Consumer Price Indexes are published monthly in this bulletin for the following cities or city combinations: St. John's, Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Saskatoon-Regina, Edmonton-Calgary and Vancouver. With the

* Available in French under the title "L'Indice des Prix à la Consommation Janvier 1949-Août 1952". (These reports obtainable for twenty-five cents each).

exception of the index for St. John's, Newfoundland, which is constructed on the base June 1, 1951 = 100, all indexes are on the base 1949 = 100. The regional indexes with the exception of the one for St. John's, are patterned after the Consumer Price Index for Canada. They are similar to this index in terms of family coverage, item content and weighting system.

These indexes fulfil the same purpose as the cost-of-living series which they replace, viz.: each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another. This fact may be illustrated by reference to temperature changes occurring in two cities. Suppose that in city A the temperature increases by 20 per cent from Time 1 to Time 2, and that in city B it increases 30 per cent during the same interval. In this instance an index of temperature change for city A would be 120 at Time 2 when Time 1 = 100, and the corresponding index for city B would be 130. From these indexes, it is obviously impossible to say whether or not it is warmer or colder in city A or city B. While the indexes form valid measurements of temperature change, they do not in any way indicate the comparative levels of temperature.

Price Index Numbers of Commodities and Services Used by Farmers: The Index of Commodities and Services used by Farmers is designed to measure the change in retail prices of farm operating costs and farm living costs. It is calculated thrice yearly, viz.: January, April and August, and is on the base 1935-39=100. For an explanation of methods of construction and an historical record, please refer to "Price Index Numbers of Commodities and Services Used by Farmers, 1913 to 1948 (Revised 1948)." A special bulletin giving total and group index detail is released subsequent to each pricing date.

SECURITY PRICE INDEXES

Price index numbers of industrial, utility, bank and mining common stocks, and preferred stocks are calculated from Montreal and Toronto exchange quotations. The indexes are designed to reflect weekly and monthly changes of interest to the investor, rather than day-to-day changes of more speculative interest. Individual stock prices are weighted by the number of shares outstanding in January of each year. The list is reviewed completely in January of each year, when new series are introduced and series of declining importance are discontinued. The Investors Index of 94 Common Stocks and the Mining Stocks Index are based on the average of the Thursday closing prices. The Preferred Stock Index is a monthly average of daily quotations.

MEASURING THE PURCHASING POWER OF EARNINGS

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels had remained constant. The following illustration shows how this kind of adjustment can be made.

Suppose that a series of weekly average wages rises from \$50.00 in week A to \$60.00 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 per cent rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, the 20 per cent rise from \$50.00 to \$60.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$60.00 by the amount of the consumer price increase. An adjusted average of \$55.00 ($\$60.00/110.0 \times 100.0$), may be referred to as a weekly wage average for week B, expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$50.00 and the week B figure of \$55.00. Taking the week A average of \$50.00 as equal to 100.0, the week B index becomes 110.0 ($\$55.00/50.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 10 per cent more goods and services than those received in week A, in spite of a 10 per cent rise in consumer prices. This 10 per cent increase in real wages compares with the rise of 20 per cent in money wages ($\$60.00/50.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experience of broad groups of workers fairly well, their applicability to individual wage earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or the sex of the wage earner. Moreover, individual spending habits differ widely, while the consumer price index which is used to adjust the earnings data is based on the average consumption pattern of a large group of urban population. Also, group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid. Finally, some part of income is saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using a price which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Neither do they take into account other family income, or changes in the savings position of families. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index.

In Table 11, Page 25, figures for 1949 are used as reference levels for indexes of both actual and real wages, since this is the year selected by the Dominion Bureau of Statistics for general post-war index number comparisons. However, the adjustment made in the foregoing illustration can be applied to any reference level, and it should not be inferred that the 1949 reference period has any special validity for earnings comparisons. Percentage change between any two periods will be the same regardless of the reference period selected.
