CONSTRUCTION PRICE INDEXES FOR HYDRO-ELECTRIC GENERATING STATIONS

1961-1970

(1961=100)

INTRODUCTION

Presented in this publication are new base-weighted prices indexes for the construction and equipping of hydro-electric generating stations. The indexes include both the inputs into construction, viz., materials, labour and construction equipment, and the installed machinery and equipment required for the production of electricity. In some instances, which are described in detail below, it was possible to replace the input prices with more appropriate prices for construction materials in-place. In addition prices are included for some elements of capital cost not previously included in construction price indexes: engineering and administration, interest during construction and temporary accommodation.

These series represent the fourth in a set of five indexes being prepared for electric utility capital additions. Indexes for distribution systems, transmission lines and transformer stations are published annually both in this publication, Prices and Price Indexes, Statistics Canada Catalogue 62-002, and in the Energy Statistics Service Bulletin, Statistics Canada Catalogue 57-002. A reference document was published upon the release of these indexes and as it provides a more expanded description of concepts and techniques used than is provided here, it is suggested that readers also refer to the earlier publication: Price Indexes of Electric Utility Construction, Statistics Canada Catalogue 62-526. Indexes for steam-generating stations are not yet available.

The Prices Division has continued to receive the assistance of the Canadian Electrical Association in the preparation of these indexes. Cost data required for the preparation of the weighting pattern were obtained from a sample of utilities. Tabulations were also reviewed for sensibility and advice was given about suitability of the price samples. Manufacturers of materials and equipment and the variety of organizations providing wage rate data have also been most helpful both in the transmittal of price reports and in providing related technical advice. All such discussions take place within the confidentiality limits of the Statistics Act.

The indexes were prepared in the Capital Expenditure Prices Unit of the Prices Division under the supervision of Mrs. Constance M. Jones.

In the following section a description of index characteristics is given. Tables are included which provide the annual indexes from 1961 to 1970 and the base-period weighting diagram. Definitions of costs, descriptions of price samples and statements about Federal Sales Tax rates are also provided.

In future these indexes will be released with the annual publication of the other electric utility construction indexes in the two publications noted above, viz. 62-002 and 57-002.

CAPITAL EXPENDITURES FOR HYDRO-ELECTRIC GENERATING STATIONS

A DESCRIPTION OF ITS COMPOSITION

In an attempt to clarify the concepts used and the location of this index in a larger statistical framework, a definition of hydro-electric capital expenditures is provided together with a diagram which illustrates the origin and the physical and financial destination of the goods and services which are used to create a hydro-electric generating station. The diagram also indicates the points at which index pricing takes place.

Conceptually, the need is to prepare a price index relating to annual gross additions to capital for hydro-electric generating stations. For the sake of convenience, capital additions for such things as permanent houses and step-up transformer stations were excluded because other indexes are available relating to these portions of capital additions. Also excluded were expenditures relating to such things as logging facilities and irrigation works which do not occur on all projects and which are ancillary to the production of electric power.

The remaining capital additions were subdivided as follows: the powerhouse, and the dams, reservoirs and waterways (often referred to as the construction components) and the mechanical and electrical equipment (often referred to as the equipment components). Included in this portion of capital was the expense necessary to produce the concrete used. Capitalized expenditure for the provision of temporary construction camp accommodation was included as was the expenditure for engineering and administrative services and interest during construction.

Diagram I is provided to illustrate in a simplified fashion the physical origin of goods and services for hydro-electric construction. Notation is provided which indicates the points at which pricing takes place. For example the output of the construction material manufacturing industry is priced through commodities such as plywood and ready-mix concrete. Equipment manufacturers provide selling prices for such things as metalclad switchgear. Input prices in the form of wage rates are provided by contractors and engineering firms. The numbers shown beside the blocks in the diagram correspond to those shown in the column "Sources of Price Data" shown in Table 1, page ix and in the text following Table 1.

CAPITAL EXPENDITURES PRICE INDEXES -- THE NECESSITY FOR COMPROMISE

The essential elements of any aggregate price index are prices of items and weights representing the relative importance which should be attached to the movement through time of prices of individual items or groups of items. In addition a time base period, during which prices are defined as equal to 100, and a weight base period, for establishing weights to be assigned to the items, are required.

The price component is the most important and difficult element of any index but particularly so in an area such as construction which rarely produces standard products which are reproduced in other time periods. The need to deal with the problem of lack of comparability over time conditions decisions about all elements of the indexes, but particularly the selection of prices for the indexes. A thorough understanding of the prices used is, therefore, of first importance in the interpretation and use of the indexes.

Price is by definition, the value in exchange of a specified unit of a commodity or service, involved in a transaction at a specific time and location, and under given conditions of purchase or sale. Further, for measurement of price change over time, it is essential that the prices being compared relate to the identical or equivalent quantity and quality of commodity or service.

It is obvious that electric utility facilities, like most other engineering construction projects, are unique and complex aggregations of commodities and services for which the collection of directly comparable prices through time is a practical impossibility. The derivation of reasonable approximations to the unobservable ideal, therefore, is required.

The traditional approach, and indeed, the only presently feasible approach, for this area of construction has been to generally utilize the input approach for pricing capital goods in-place. A review of the electric utility construction reference document will show that the indexes heretofore published for the construction components are, for all practical purposes, input indexes. For the production equipment components, selling prices of completed goods are utilized.

The main deficiency of the input approach (as opposed to an appropriate selling price for a completed structure) is that any effect of changed efficiency in fabrication which may be handed on to the purchaser in the form of altered price levels is excluded from the index. It is generally believed, on the basis of logic, which is supported by empirical evidence at some aggregative levels, that input indexes show a faster rate of increase than would the related completed goods index. Available empirical data permit statements to be made about the possible differences in some broad areas of construction but not relating to specific types of construction.

Within this context, the possible alternatives were as follows. One could continue the traditional construction index approach and create an input price index. This approach would have the advantage of conceptual purity but would be difficult to produce because of a lack of detailed cost data necessary to create the weighting diagrams. In addition, as has been suggested above, it is an imperfect solution if one wishes an index for capital goods in-place.

The available alternative was to utilize in-place prices wherever possible to more closely approximate construction in-place. For example price indexes are available for highway contractors prices for embankment in-place and to ready-mix concrete manufacturers' selling prices for ready-mix concrete. The utilization of such large-weighted prices would have the advantage of reducing the relative importance of the remaining elements where only input prices are available. It follows however that it must be possible to assume that the indexes selected are reliable indicators of price change for hydro-electric construction.

Upon consideration of the alternatives the limited pure input approach was rejected and a closer approximation to the ideal completed structure index was attained by use of in-place prices. As can be seen from Table 1 these prices are given a weight of about one-fifth of the total index. Provision has been made to substitute in-place prices for such things as fabricated steel and temporary accommodation as soon as these indexes become available. When this process is completed the weight of the in-place prices will rise from one-fifth to about 60 per cent of the total index.

For the remainder, excluding utility production equipment and interest during construction, the traditional input approach has been utilized; labour, materials and construction equipment prices are combined with fixed weights to represent selling prices of such things as steel in-place, clearing, or engineering services. Embedded in this approach is an assumption of no changes in efficiency of putting materials in place and no changes in contractors profit margins. The former assumption leads one to question a trend of the indexes, the latter the validity of turning points. For electric utility users the latter is of less importance. Studies of an experimental nature are currently under way to determine the relevancy of the fixed-efficiency assumption for electric utility construction(1). In the interim, basic union wage rates, as opposed to rates which include fringe benefits, have been utilized because of evidence suggesting that for construction basic wage rates rise less sharply than do rates including those fringe benefits which are readily evaluated.

For equipment components of the indexes, manufacturers' selling prices for appropriate classes of goods are utilized as they are available, as can be seen from the descriptive material provided below. For generators, turbines and gates, where the model pricing projects have not matured sufficiently to provide usable series, proxy indexes have been utilized. If the model prices prove suitable, they will be introduced into the indexes from about 1968. In the interim, the best available substitutes have been selected.

(1) This study consists of the recosting of a selected sample of projects for distribution systems and transmission lines. The materials bill and the design is held constant for short periods of time. Machine and labour inputs are identified and costed out at prevailing unit costs to the contractor or utility. Changes in material inputs and changes in quantities and cost of labour equipment used would be identified. No attempt has been made thus far to include design cost and overhead costs as part of the experiment.

A characteristic of the market for such things as hydraulic generators is that few orders are let in any given year and rare is the order with a specification identical to that of any other order. In such circumstances price estimates are derived by asking the manufacturers to bid a specified model each year stating what price would have been sufficiently low to have won that hypothetical or model order in the market specified. This estimated new order price is assumed to include works costs adjusted as necessary to reflect prevailing levels of overheads and profits. Escalation costs are excluded. Model pricing for equipment is presently underway for turbines, generators and gates. The index items structural steel in-place and temporary accommodation are also being priced in this fashion. Other areas will be covered similarly later.

Much use has been made of manufacturers' selling prices which are for goods physically similar to those used in hydro-electric construction. However the normal volumes on which such goods are sold will not often be typical of hydro-electric construction purchases. Thus it has been necessary to utilize smaller volume sales to represent the larger volume intermittent purchases for this class of construction. Similarly prices reported are for sales to classes of customers on the market continuously.

A final major difference of the hydro-generation indexes compared to the earlier published indexes is that capitalized expense for such things as temporary accommodation, interest during construction and overhead expenses, have been included as an index category. The long length of time required to construct hydro-electric projects, the large design and supervisory inputs are the characteristics determining the importance of these components - a feature of no surprise to utility users but one of possible surprise to those less familiar with electric utility construction. Thus the capitalized cost of a hydro-electric station is considerably more than the cost of output of construction activity and the cost of equipment sold by manufacturers. As a result, indexes are provided which relate to the erection and operation of construction camps, interest during construction and to engineering and administrative expense which mainly relates to salaries and wages for such people as engineers and technicians. Utility users will be able to utilize many of these same individual indexes if they wish to revalue separately engineering and administrative expense relating to other classes of utility construction. When the currently published 1961=100 indexes are revised to a 1971=100 base, similar elements of expense will be included as relevant for all four categories of indexes. For the indexes currently published, this component will represent a much smaller proportion of expense than is shown for hydro-electric generating stations.

A more expanded statement of the characteristics of the price sample is provided below and in Table 3.

SOURCES AND CHARACTERISTICS OF THE PRICE DATA

The purpose of this section is to provide a description of the price data utilized in the index together with descriptions of sources from which more detailed descriptions can be obtained.

Prices used in the index have the following origins:

	Mainly Statistics Canada Sources	Mainly Non-Statistics Canada Sources
Materials and equipment	x	
Labour		x
In-place prices	x	

The materials and equipment prices have been adjusted for Federal Sales Tax utilizing the rates shown in Table 4, page xx.

With respect to the labour component, the principal source of wage rates is basic union rates recorded in agreements and tabulated for major cities by or for the Canadian Construction Association. These data are thought suitable because much hydro-construction work is done by union workers and because wage levels at remote sites are for the most part a function of the union levels prevailing in the main employment centres of the province. As a result, wage rate movement in remote sites is expected to have a similarity with wage rate movement in major settled locations. Wage rates from the nine cities included have been aggregated utilizing the province weighting pattern presented on page xiii.

Price comparability is ensured by paying close attention to specifications and terms of sale during the pricing process and by obtaining either overlapping prices or estimates of the cost of producing changed components. These conventions are described in more detail in the data sources mentioned below and are summarized in Price Indexes of Electric Utility Construction, Statistics Canada Catalogue 62-526, pages 12, 13, 29 and 30.

The following table summarizes the multiplicity of data sources and serves to introduce the more complete explanation which follows.

TABLE 1. Price Sources for the Construction Price Indexes of Hydro-Electric Generating Stations

	Relative importance or weight of the item in the index		Sources of price data (Statistics Canada data unless asterisked)
A. Prices obtained from appropriate or nearly appropriate price locations		29.5	(1)
Ready-mix concrete for concrete production ...	8.7	21.5	1 Manufacturers' selling prices collected through the Industry Selling Price Indexes system which are used also in a variety of special purpose indexes
Excavation and embankments	12.8		2 Highway Construction Price Indexes for grading and granular base courses
Interest during construction		8.0	3 * McLeod, Young, Weir Average Yield for 10 Provincial Bonds
B. Substitute prices (prices which will be replaced later with more appropriate price indexes which are being developed		36.2	
Power house finishing		1.4	4 Non-residential Building Materials Index
Fabricated steel in-place, (structural and plate)		3.1	1 Manufacturers' selling prices and selected wage rates, from various sources listed in C, below
Mechanical equipment		10.5	5 Implicit Price Index for Machinery and Equipment relating to business gross fixed capital formation
Electrical equipment		11.2	1 Manufacturers' of Heavy Electrical Equipment, ISPI Index 3360
Temporary construction camps:			
Building and equipment		5.5	5 Adjusted Implicit Price Index for Residential Construction relating to business gross fixed capital formation, and manufacturers' selling prices
Operation		4.5	1 Manufacturers' selling price indexes supplemented by prices obtained from the Consumer Price Index, the General Wholesale Index and Average hourly earnings from the Labour Division, Statistics Canada
C. Input Prices		34.3	
Materials		3.3	1 Manufacturers' selling prices, mainly collected through the Industry Selling Price Indexes system
Labour	12.8	29.8	9 (a) * Canadian Construction Association basic union wage rates
	9.5		10 (b) * Pay Research Bureau prevailing levels of salaries and wages selected occupational groups
	7.5		11 (c) * Canada Department of Labour Wage Rate Surveys, Economics and Research Division
Construction Equipment and Operation	(2)	(1.2)	12 (d) Labour Standards Branch, Canada Department of Labour
			1 Canadian manufacturers' selling prices
			13 Canadian distributors purchasing prices
			14 US Bureau of Labour Statistics, (published price indexes adjusted for exchange duty and Federal Sales Tax)
Total		100.00	100.00

(1) The numbers provided are cross-reference numbers to the text following and to Diagram 1, page vi.

(2) Negligible.

1. Manufacturers' Selling Prices

For any given commodity, price change reports are usually provided by at least three leading Canadian manufacturers whose reports are weighted together to provide an estimate of price change at the Canada level for the commodity. Prices are f.o.b. plant, ex. federal sales tax. Attempts are made to ensure that transaction prices are reported. Discontinuities in price are evaluated, and their effect removed from the index, mainly by obtaining overlapping market prices or by evaluating the commodities on the basis of differences in costs of production. Most manufacturers' prices are taken from the Industry Selling Price system of indexes although a few are drawn from the General Wholesale Indexes or the Transmission Line Indexes. The above description is, in this context, appropriate for all indexes. These indexes have been utilized for ready-mix concrete, for much of camp operation, for electrical equipment and the materials and equipment components of the input portion of the index.

Source: Industry Selling Price Indexes, Statistics Canada Occasional Paper Catalogue 62-528. Prices and Price Indexes, Statistics Canada Catalogue 62-002. The identification numbers provided in Table 3 following, wherein the price sample is described, are the same as the Industry Selling Price Index identification numbers given in Table 2 of Statistics Canada Catalogue 62-002. Price Indexes of Electric Utility Construction, Statistics Canada Catalogue 62-528 page 10 also gives a description of the ISPI system of indexes.

2. Highway Construction Price Indexes

Selected bid prices reported annually on provincial highway construction contracts are combined to derive weighted average unit prices for such construction activity as putting crushed gravels in-place or removing rock from the right-of-way. The prices can be thought of as highway contractors selling prices and they exhibit volatile price behaviour unlike many construction indexes. The highway indexes for grading and granular base courses have been utilized to represent price movement for excavation and embankment work in hydro-electric projects.

The published provincial indexes for grading and granular base courses, have been weighted together utilizing cost data reported by the utilities. Although the total index is provided, the individual major component indexes are not given because of the inability of the central statistical agency to say authoritatively that a given provincial index is appropriate for every particular utility within that province. However a given utility upon examination of its own cost and appraisal records can quite properly select any one or combination of these indexes to simulate price change appropriate to itself.

Source: Highway Construction Price Indexes, DBS Catalogue 62-520.

Revised Highway Construction Price Indexes reprint from December 1967 issue of Prices and Price Indexes, DBS Catalogue 62-002.

A somewhat longer statement of the characteristics of these prices can be found in any issue of Prices and Price Indexes on page 62.

3. McLeod, Young, Weir Average Yield for 10 Provincial Bonds

The provincial bond yield average published monthly by McLeod, Young, Weir represents the average percentage yield for a selected list of medium and long term bonds available for purchase on the monthly pricing date. Bonds included in the sample are a judgement sample of the portfolio of any given province which in the opinion of the firm is representative of the total portfolio available for purchase on the pricing date. Bonds issued by the provinces and by provincial agencies such as Hydro Quebec are included in the sample.

The index calculated from the above data is thought appropriate to reflect price movement for the index component "interest during construction". This component is defined by the utilities as interest foregone and is the estimated cost to the utility of earnings lost because the capital is invested in assets which will not earn a return until the completion of the project.

Source: McLeod, Young, Weir and Company Ltd.
50 King Street West, Toronto 110

4. Non-Residential Building Materials Index

Industry selling price indexes are utilized in the preparation of the non-residential building materials index after they have been adjusted to reflect changes in Federal Sales Tax rates. Because of the multiplicity of finishing items and the small weight of this item in the total index, the total Non-Residential Building Materials Index has been utilized as opposed to selecting and re-weighting a number of specific commodities to represent price movement for the component "powerhouse finishing".

Source: Prices and Price Indexes, DBS Catalogue 62-002. The May, 1970 issue contained an expanded description of the material, labour and combined cost indexes.

5. Implicit Price Indexes from the National Income and Expenditure Accounts

The preparation of the estimates of national expenditure in constant dollars permits the further derivation of what are called the implicit price indexes. Thus if any given element of current value expenditure is divided by that same expenditure revealed in the prices of some selected base period, a ratio is produced which is called an implicit price index.

In many instances users who cannot find a specifically appropriate capital expenditures index utilize an implicit price index because it is the most nearly appropriate substitute.

These indexes have recently been revised to a 1961=100 base and the construction indexes now include an estimated general adjustment for changes in contractors productivity and overheads as well as for changes in manufacturers selling prices for construction materials and labour.

All of the indexes utilized here come from the category "business gross fixed capital formation".

Sources: National Income and Expenditure Accounts, 1926 - 1968 Ottawa, August 1969

Canadian Statistical Review, Statistics Canada Catalogue 11-003. See particularly the feature article in the November, 1970 issue.

Prices and Price Indexes, Statistics Canada Catalogue 62-002.

6. Consumer Price Index

Consumer price indexes utilized in this index relate mainly to the food components of camp operation. Prices are collected monthly by enumerators who report posted prices from a wide variety of chain and independent food stores. Commodity prices for a selected type of outlet within a given city are provided an equal weight. Types of outlets are weighted together in terms of their relative importance in the market in the weight-base period and cities are weighted together on the basis of their relative food sales volume in the weight-base period.

Source: Prices and Price Indexes, Statistics Canada Catalogue 62-002.

7. General Wholesale Index

See the statement for manufacturers' selling prices, above.

8. Average Hourly Earnings, Labour Division, Statistics Canada

Because average hourly earnings represent the prevailing unit cost of work done in a given industry their use as proxies for price change has arisen only when no other appropriate series was available. In this series they were used only to represent wages and salaries of those operating the construction camp.

Average hourly earnings result from dividing total weekly wages by the total weekly hours.

Total weekly wages represents the gross payment for straight time and overtime, including incentive pay, shift, bonuses, vacation pay and sickness pay made to weekly wage earners working on a part or full-time basis.

Total weekly hours results from dividing the total weekly man-hours worked, including hours of overtime, by the total number of wage earners who worked the hours.

Source: Man-hours and Hourly Earnings, Statistics Canada Publication 72-202.

9. Canadian Construction Association Wage Rates

Most wage rate data utilized in these indexes emanate from the Canadian Construction Association surveys of wage rates for journeymen as published in union agreements. Only the basic wages are utilized in these indexes. Cities included in the sample are as follows:

St. John's, Newfoundland	Winnipeg
Halifax	Regina
Saint John, New Brunswick	Edmonton
Montreal	Vancouver
Toronto	

The Canadian average for any given trade results from the indexes of wage rates for the above city sample weighted together utilizing the province weights shown for hydro-electric stations on page vii.

The indexes published provide only Canada total indexes. Wage rate indexes for selected trades, by city, will be published in detail later, both quarterly and annually.

The wage rate indexes when combined with the construction equipment indexes, provide the substitute indicator of the change in the cost of putting specified construction materials in-place.

10. Pay Research Bureau Trends in Rates of Pay

The Pay Research Bureau of the Federal Public Service Commission has permitted publication, at the Canada level only, of indexes of salary change for engineers and technicians.

Pay Research Bureau confidential surveys determine what major employers are paying for work comparable to selected civil service occupations. To achieve this comparison civil service occupations are finely specified as are the occupations with which each is ultimately matched.

Within a given occupation the performance requirements can change from year to year. Thus far it has been possible to prevent these changes from affecting index movement by selecting for inclusion major sub-categories which have remained unchanged. When such procedures are not possible attempts will be made to estimate the value of the differences.

Prevailing salary levels are usually available by province. Weighted average rates for Canada, as prepared by the Pay Research Bureau, were utilized in index calculations.

Questions about these surveys should be directed to the Pay Research Bureau.

11. Wage Rates Published by the Canada Department of Labour

Rates from the Department of Labour annual surveys are used for millwrights, draftsmen and clerks. Rates published for the most recent period are Prices Division estimates and are replaced by survey data as soon as it is available.

The Department of Labour describes its wage rates as follows:

- an average wage rate is derived by multiplying the hourly rate for the various components of an occupation by the number of employees receiving the rate. The result is divided by the total number of employees in a given occupation;
- overtime premium rates are not included in the wage figures nor are such things as shift differentials. The rates are derived before employee deductions for such items as taxes are made;
- rates relate to fully qualified employees.

Source: Wage Rates, Salaries and Hours of Labour, Annually
Economics and Research Branch
Canada Department of Labour

12. Fair Wage Rates - Canada Department of Labour

Wage rates calculated for the construction trades by the Labour Standards Branch of the Department of Labour are utilized in the indexes for boilermakers and truckers. Rates calculated by the Department are used as minimum rates on all federal government construction contracts. For the cities for which rates are published herein the Department of Labour believes that no differentials exist between the federal government rate and the rates prevailing on non-government engineering construction. The rates used for the trades and cities price sample should be interpreted as reflecting union scale because collective agreement rates are paid by most of the employers surveyed. The unit cost of fringe benefits is excluded from the rate used in the index.

Source: Labour Standards Branch
Canada Department of Labour

13. Purchasers' Prices paid by Canadian Equipment Distributors

In some instances prices of imported goods are collected from distributors instead of from foreign manufacturers. Prices from this source are difficult to evaluate when the goods change their characteristics but attempts are made to work with the foreign manufacturer to evaluate quality changes.

These data are embedded in some of the construction equipment indexes utilized within the hydro-electric generating stations index.

14. U.S. Bureau of Labour Statistics

For goods which enter Canada mainly from the United States published Bureau of Labour Statistics indexes of manufacturers' selling prices have been utilized as necessary to supplement DBS collections from American manufacturers.

The BLS indexes are adjusted to reflect changes in exchange, duty rates and taxes. These series are utilized mainly in the construction equipment components of the indexes.

Summary

In summary, prices at the level most closely approximating sales of construction goods, services and production equipment for electric utility construction were selected from a wide range of available sources of statistics. Where alternatives existed, indexes were selected which were judged to minimize the problem caused by not having specifically appropriate price indexes available.

INDEX WEIGHTS

Hydro-electric construction consists of unique, and widely differing, projects which usually take more than two years to complete, and which occur relatively infrequently. While most large generating utilities usually invest in additions to hydro-electric plant each year, the expenditures in successive years will usually not relate to purchases of similar goods and services. The total amount spent will fluctuate sharply from year to year. A final important characteristic is that accounting records of gross additions to capital maintained by the utilities are rarely kept in the detail required by the price index maker nor is there consistency of accounting practice among utilities. Fortunately, many utilities maintain detailed construction records of individual projects which can be used as necessary to supplement records of capital expenditures.

In these circumstances capital expenditure data is obtained from a variety of sources relating to many years. The cost data are corrected for price change, tabulated and summarized as outlined below.

Total gross capital expenditures for generating plant were available, by province, for the period 1956 to 1965 from Statistics Canada Business Finance surveys of capital expenditures by electric utilities. Expenditures for hydro-electric plant were extracted from the totals by means of statements of total expenditure on hydro-electric and other generating facilities by the five generating utilities which accounted for better than 90 per cent of total gross additions to generating capital during the period. The remainder of the expenditure was apportioned on the basis of ratios derived from additions to generating capacity.

This process resulted in the following provincial weighting diagram which is shown in the first column of the table below. Also shown is the portion, by province, of additions to total generating stations and to steam generation stations only.

Proportion of Gross Annual Capital Expenditures, by Province, 1956-1965, for Hydro-electric Generating Stations, for Steam-electric Generating Stations and for all Generating Stations

	Generating stations		
	Hydro-electric	Steam-electric, including nuclear	All generating stations
Newfoundland	1.2	1.2	1.2
Nova Scotia1	3.6	1.3
New Brunswick	1.3	8.2	3.6
Quebec	52.2	14.3	39.7
Ontario	21.5	53.5	32.0
Manitoba	7.8	3.3	6.3
Saskatchewan	1.6	4.6	2.6
Alberta	1.3	4.0	2.2
British Columbia	13.0	7.3	11.1
Total	100.0	100.0	100.0
Proportion, each type of generation is of total generating expenditure	67.1	32.9	100.0

The above weights were then apportioned to individual project data provided by utilities from each province. Thus if cost data were utilized for seven Ontario projects, each project received a weight of about three per cent in the calculation of the total index weights.

Most of the weights within a given province were derived from individual project data and projects related to the period 1950 to 1963. In some instances utilities were able to provide commodity or other sub-aggregative cost data from their annual additions to capital records.

The weights derived from the cost data provide relative expenditures for hydro-electric construction at the national level during the period reviewed. However as a national average may not be representative of the costs of a given utility user, it may be more appropriate for the utilities to make use of the commodity or sub-aggregative indexes only and thus incorporate as weights, data derived from the utilities own records of capital expenditures. This substitution of appropriately derived company weights for the published national weights does not invalidate the use of this system of indexes as a source of official indexes. To assist in the process of deriving appropriate weights a definition of cost will be found in Table 5, page xxi, and a detailed description of the price sample will be found in Table 3, page xviii.

TIME BASE FOR THE INDEX

The time base chosen for this index was 1961=100 in conformity with the previously published electric utility construction indexes.

Although these indexes may be converted arithmetically to a 1971=100 base during some general conversion of Statistics Canada indexes, a complete rebasing of the indexes will probably not occur until the late seventies. This is mainly because of the massive resources required both by the utilities and Statistics Canada to prepare summaries of cost data in the amount of detail required.

INDEX FORMULA

The formula for the index may be written as follows:

$$\begin{aligned}
 I_n &= \frac{\sum P_n q_o}{\sum P_o q_o} \times 100 \\
 &= \sum \frac{P_n}{P_o} \times \left\{ \frac{P_o q_o}{\sum P_o q_o} \times 100 \right\} \\
 &= \sum \frac{P_n}{P_o} \times w_o, \text{ where } w_o = \frac{P_o q_o}{\sum P_o q_o} \times 100
 \end{aligned}$$

where:

I_n	= index for year n
\sum	= summation over all items
P_n	= price of an item in year n
P_o	= price of an item in year o, the base year
$\frac{P_n}{P_o}$	= price in year n, as a ratio of price in year o, (This price ratio is often referred to as a price relative or an index.)
w_o	= relative importance of the price movement of an item in the index
q_o	= quantity of a particular item in the weight base period
$P_o q_o$	= value of a particular item in the weight base period
$\sum P_o q_o$	= value of all items in the weight base period
$\frac{P_o q_o}{\sum P_o q_o} \times 100 = w_o$	= relative value, or weight, of an item in the weight base period

USES AND LIMITATIONS

Price indexes have an important role to play as one of the many indicators which can be of use in analyzing economic problems.

Anyone interested in analyzing price movement for a wide range of materials and services relating to this particular area of construction is being provided with greatly expanded price coverage. Regional price coverage has been given more emphasis than has been usual heretofore and it is intended to seek the necessary prices to expand the regional coverage even further.

A major use of the price indexes is to obtain estimates of hydro-electric capital expenditure from which the effect of price change has been removed. (1,2)

- (1) In Appendix F, page 33 of Price Indexes of Electric Utility Construction, an algebraic illustration of this statement is provided. See Statistics Canada Catalogue, 62-526.
- (2) Utility interest in deriving such a value series arises from the fact that capital requirements for electric power supply and distribution are heavy, periods of construction are protracted and physical assets are expected to be in useful service for very long periods of time. Any studies or analyses involving investments, must therefore, encompass a long span of years. Values of capital investment expenditure are not comparable and have limited analytical usefulness until they are corrected for price change.

Until the publication of these indexes, the user requiring official Canadian statistics for this purpose could follow one of two courses: the Implicit Price Indexes, which are general indexes derived from the national accounts deflation, could be selected, or the user could prepare specifically appropriate indexes from the multiplicity of detailed official indexes available.

Because the second approach involves the user in a large amount of work and because more price data is available to Statistics Canada than to the user, it was decided to prepare the indexes presented here in which are a specifically selected set of relevant price index numbers. As a result these indexes represent a substantial improvement over previously available statistics for users requiring an indication of price change for capital expenditures in hydro-electric plant. The indexes as published provide an estimate of average national price change for the installation of hydro-electric plant.

The utility user is more fortunate than other users in that the utility can often obtain and utilize more detailed cost data. By revaluation of capital at finer levels of detail the effect of some of the fixed-weight conventions can be mitigated. It follows from the above that the use of the indexes at a fine level of detail with appropriate company weights does not invalidate the use of the system of indexes as official indexes because the component indexes within the national aggregate are also official indexes. In other words, the national average is not the only official index in the system and indeed its use implicitly assumes that the user has found the weights used in national average to be close to the utilities own experience, or that the differences are unimportant in the context of the intended use. The individual user may also find that index accuracy is improved by utilizing appropriate regional indexes as opposed to the national commodity or wage rate indexes.

It is anticipated that a variety of new price series for such things as turbines, fabricated steel in-place and camp accommodation will be incorporated into the index over the next five years. As some of these indexes may result in revisions to previously published indexes, users are requested to refer to the most recently published indexes. Revisions can be anticipated in all index categories.

Because of the multiplicity of price levels used, the definition of capital used, the use of substitute price indicators, and the availability of regional as well as national price indicators, the user is urged to proceed with some thoughtfulness in the use of the indexes.

TABLE 2. Construction Price Indexes for Hydro-Electric Generating Stations, including Weights, Totals,
Major Group and Commodity Indexes - Canada, Annually 1961 to 1970
1961=100

Total, major group and commodity indexes	Index weights(1)				1961	1962	1963	1964	1965	1966	1967	1968	1969	1970P

(1) Sufficient index weights are given to three decimal places to reduce errors in index recalculations.

P Preliminary figures.

TABLE 2. Description and Sources of Prices Used in the Hydro-Electric Generating Stations Construction Price Index

Index item	Description of index item	Source of the price data (Price Division data unless otherwise specified)
<u>Powerhouse</u>		
Excavation	Grading indexes	Highway Construction Price Index.
Concrete in place:		
Production	3,000 psi ready-mix concrete	Industry Selling Price Index 3480, referred to below as ISPI.
Reinforcing steel installation:		
Labour	Iron workers, reinforcing	Canadian Construction Association referred to below as CCA.
Materials	Bars, concrete reinforcing	ISPI 2910-042.
Formwork erection:		
Labour	Carpenters and labourers	CCA.
Materials	Input indexes as follows: Light structural steel Douglas fir plywood Welders	ISPI 2910-040. ISPI 2520-035. Labour Standards Branch, Canada Department of Labour.
Concrete placement:		
Labour	Crane operators, labourers, concrete finishers	CCA.
Equipment and operation	Mobile truck cranes	U.S. Bureau of Labor Statistics and manufacturers' selling prices from the DBS Machinery and Equipment Indexes.
	Gasoline, diesel fuel and lubricating oils	Components of ISPI 3651 and 3652.
Structural steel in-place:		
Labour	Crane operators and structural iron workers	CCA.
Materials	Heavy structural steel shapes	A component of ISPI 2910.
Powerhouse finishing:		
Labour	Sheet metal workers, labourers, electricians and plumbers	CCA.
Materials		Total Non-Residential Building Materials Index.
<u>Dams, waterways and reservoirs</u>		
Clearing:		
Labour	Labourers and tractor operators	CCA.
Equipment:		
Crawler tractors	Tractors, crawler mounted	Manufacturers selling prices.
Trucks	Gross vehicle wt. 6,000 lbs or less	ISPI 3230-010.
Operation expenses		
	Gasoline, diesel fuel and lubricating oils	Components of ISPI 3651 and 3652.
	Replacement parts and mechanics	Transmission Lines Index.
Excavation and embankment:		
Excavation	Grading indexes	Highway Construction Price Index.
Embankment	Granular base course indexes	Highway Construction Price Index.

Concrete in-place	Same as concrete in-place in powerhouse	
Plate steel installation:		
Labour	Crane operators and structural iron workers	CCA.
Materials	Plates, 100" and under in width	ISPI 2910-045-052.

Mechanical equipment

Equipment	Implicit Price Indexes for Machinery and Equipment	Indexes for Business Gross Fixed Capital Formation prepared by The National Income and Expenditure Division, DBS.
Installation	Millwrights Electricians and plumbers	Economics and Research Branch, Canada Department of Labour. CCA.

Electrical equipment

Equipment	Manufacturers' Selling Price Indexes of Electrical Industrial Equipment	ISPI 3360.
Installation	Electricians, structural iron workers and labourers	CCA.

Temporary construction camps

Camps:		
Buildings	Implicit Price Index for Residential Construction (1961=100)	National Income and Expenditures Division, DBS.
Equipment	Stoves, refrigerators and freezers	Components of ISPI 3320.
Operation:		
Labour	Average hourly earnings for hotels, restaurants and taverns	Statistics Canada, 72-202, Review of Man Hours and Hourly Earnings.
Food	Fresh fruits and vegetables Canned fruits and vegetables Meats and fish Poultry and eggs Miscellaneous groceries Dairy products	Consumer Price Index, Table 9. ISPI 1120 1, 11, 12, 27, 33, 37, 42 and 62. Components of ISPI 1010. General Wholesale Index. Components of ISPI 1120 and 1392. Components of ISPI 1051, 1053 and 1055.
Other materials	Pots, pans, glassware and chinaware Blankets, pillows and cotton sheets Detergents and cleaning compounds Bed springs and mattresses	Consumer Price Index, Table 9. ISPI 1830-25. ISPI 3760-19, 20 and 29. ISPI 2660-55, 58 and 61.

<u>Interest during construction</u>	Ten provincial bond yield averages	McLeod, Young, Weir, 50 King Street West, Toronto.
-------------------------------------	------------------------------------	--

Engineering and administration

Engineering and technical	Engineers II, III and technician III	Pay Research Bureau, Public Service Staff Relations Board.
Drafting and clerical	Senior and intermediate draftsmen and various clerical categories	Economics and Research Branch, Canada Department of Labour.

TABLE 4. Federal Sales Tax Rates for Materials and Equipment Utilized in the Calculation of the Hydro-Electric Generating Stations Construction Price Index

Index component	Federal sales tax rates						
	1/1/61 to 6/14/63	6/15/63 to 3/31/64	4/1/64 to 12/31/64	1/1/65 to 12/31/66	1/1/67 to 3/31/67	4/1/67 to 6/1/67	6/2/67 to publica- tion date
Powerhouse:

Temporary construction camps:							
Buildings(4) Equipment	11	11	11	11	12	12	12
Operation:							
Food	0	0	0	0	0	0	0
Other materials:							
Utensils, dishes, flatware, etc.	11	11	11	11	12	12	12

- (1) The tax rate shown is applied only to the value of cement and chemical additives in the ready-mix concrete.
- (2) The Non-Residential Building Materials Index which is used as a proxy for the material component is already adjusted for Federal Sales Tax utilizing rates appropriate to this index.
- (3) Plate steel in-place represents price movement for penstocks and liners and the tax rates shown are appropriate for those elements of cost.
- (4) The Residential Implicit Price Index which is used as a proxy for camp buildings is already adjusted for Federal Sales Tax. The rates utilized are appropriate for this index.

TABLE 5. Definition of Cost Used in Deriving the Weighting Pattern for Construction Price Indexes for Hydro-Electric Generating Stations

Index item	Definition of expense
POWERHOUSE	Includes both substructure and superstructure
Excavation	Expense for: drilling blasting mucking and removal of rock lifting and removal of earth
Concrete-in-place	For additional details see concrete-in-place for dams, reservoirs and waterways. Expense for: concrete production reinforcing steel installation formwork erection concrete placement including conveying and heating
Structural steel-in-place	The cost of the supply and erection of structural steel for the frame of the powerhouse and other miscellaneous embedded steel
Powerhouse finishing	Expense for: plumbing drainage lighting stone brick or blockwork painting miscellaneous items
DAMS, RESERVOIRS AND WATERWAYS	Three elements of expense, unwatering, underground excavation and miscellaneous expense, as listed below, were not retained for direct pricing within the dams, reservoirs and waterways index. Thus it was assumed that their price movement would be similar to the average of the items included for pricing within the category. This assumption was based on the similarity of the components of imputed elements to all the elements priced directly within the category.
Imputed items	
Unwatering	Expense for: pumping, cofferdams, excavation, piling (steel and timber) rock anchors, concrete, embankments, sheeting.
Underground excavation	For tunnels and shafts; including excavation, grouting, liners and concrete work.
Miscellaneous expense	Rock anchors, grouting, drainage, fencing, rails, gauges and piping, other miscellaneous expense.
Items priced directly	
Clearing	Cutting and removal of trees.
Excavation	Removal of rock and earth as defined above for the powerhouse in relation to channel improvements, cliff improvements, river diversions, intake structures, dams and reservoirs.
Embankment	Expense for: the placing and compaction of pervious and impervious materials, for the supply and placing of riprap in dams, embankments and canals.
Concrete-in-place	For dams, headworks, and sluiceways.
Concrete production	Expense for: the installation and operation of aggregate production plant, including compressed air plant; installation and operation of aggregate conveying system, mixing plant and heating plant; costs relating to cement acquisition, hauling, storage and distribution.

TABLE 5. Definition of Cost Used in Deriving the Weighting Pattern for Construction Price Indexes for Hydro-Electric Generating Stations - Continued

Index item	Definition of expense
Reinforcing steel installation	Supply, bend and place reinforcing steel.
Formwork erection	Supply, erection, relocation and removal of forms.
Concrete placement	Includes expense for delivery, conveying, placing, vibrating, heating and finishing concrete.
Plate steel installation	Supply and erect penstocks and liners. Supply and erect miscellaneous embedded steel for gates.
MECHANICAL EQUIPMENT	
Turbines	Includes expense for governors, scroll cases, liners and valves as well as the supply and installation of the turbines.
Gates	The supply and installation expense of gates and trash racks.
Miscellaneous equipment	Expense for: cranes and winches elevators fire protection systems gauges meters and recording devices cooling water oil systems draft tube decompression sump and dewatering compressed air systems
ELECTRICAL EQUIPMENT	
Generators	The supply and installation of generators including associated control, monitoring switching, and grounding systems.
Other expense	Station service transformers, supervisory equipment, cables ductwork and grounding, metalclad switchgear, miscellaneous.
TEMPORARY CONSTRUCTION CAMPS	
Temporary buildings	This expense relates to providing temporary accommodation and work shops for those living at the job-site. Dormitories, cafeterias, buildings for recreation, laundries, garages and warehouses.
Equipment	Stores, refrigerators, laundry, equipment.
Camp operation	
Labour	Cooks, waiters, cleaners.
Materials	Food, linens, bedding.
INTEREST DURING CONSTRUCTION	Interest foregone during the construction period.
ENGINEERING AND ADMINISTRATION	
Engineering	Costs for planning and design, site surveys, model preparation, project supervision, soil testing and concrete control.

TABLE 5. Definition of Cost Used in Deriving the Weighting Pattern for Construction Price Indexes
for Hydro-Electric Generating Stations - Concluded

Index item	Definition of expense
Administrative expense	Expense for: head office overheads superintendence accounting personnel legal fees unallocated stores expense injuries and damages telephone office supplies power during construction residual transportation services other miscellaneous expense.
EXPENDITURES EXCLUDED FROM THE TABULATIONS	
Lands and land rights	
Temporary construction not previously mentioned	Roads, bridges, distribution systems.
Permanent ancillary structures	Roads, bridges, parking lots, wharves, piers, fish lifts and ladders, parking lots, logging facilities, water and sewer systems.
Other major elements of utility production capital	distribution systems transmission lines step-up transformer stations.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes were higher in July than in June for 42 manufacturing industries, lower for 16 and unchanged for 42.

In terms of the relative importance of industries within manufacturing, the more notable changes in July were increases recorded in the wood industries group due mainly to substantial price rises in the sawmills and shingle mills industries. Increases were also evident in the foods and beverages and primary metals groups principally iron and steel mills. Decreases for the period were of small magnitude.

The arithmetic average of the 100 industry indexes increased in July to 123.3 from 122.4 in June. The average increase for those industries showing higher price movements was 1.5%, while the comparable figure for those showing decreases was 0.4%.

June to July Changes in Industry Indexes

	July/June			Major group indexes		
	Number of industries			July 1971	June 1971	July 1970
	In-creases	De-creases	Un-changed			
All industries	42	16	42	(1)	(1)	(1)
Foods and beverages industries	9	3	11	126.9	126.3	124.5
Tobacco and tobacco products industries	1	-	-	(1)	(1)	(1)
Rubber products industries	-	1	1	108.4	108.9	105.1
Leather industries	-	-	3	130.0	129.8	126.8
Textile industries	2	2	5	102.9	102.8	104.0

(1) Indexes not available at this level of aggregation.

General Wholesale Index (1935-39=100)

The general wholesale index moved up 0.6% in July to 291.0 from the revised June index of 289.4. It was 1.7% higher than the July 1970 index of 286.0. Each of the eight major group indexes were higher than in June 1971.

The wood products group index advanced 1.0% in July to 399.0 from 394.9 on higher prices for fir, spruce, and cedar. A rise of 0.8% to 317.9 from 315.5 in the iron products group index was mainly attributable to price increases for rolling mill products, wire and pipe and tubing, offset only partially by the continuing decline in scrap. Higher prices for milk and its products and cured meats were the principal items responsible for an increase of 0.5% to 322.5 from 321.0 in the animal products group index. The non-metallic mineral products group index moved up 0.5% to 226.7 from 225.5 on higher prices for asbestos and lime. Increases of 0.3% or less occurred in four major group indexes; vegetable products to 238.0 from 237.4, textile products to 262.2 from 261.5, chemical products to 240.5 from 239.8 and non-ferrous metals to 263.0 from 262.4.

The following table shows some of the more noteworthy changes:

Commodity group and sub-group	Percentage changes		
	<u>July 1971</u> June 1971	<u>July 1970</u> June 1970	<u>July 1971</u> July 1970
Wood products group	+ 1.0	- 0.9	+ 5.3
Spruce	+ 4.8	- 0.3	+ 25.1
Cedar	+ 4.5	+ 3.2	+ 19.5
Fir	+ 3.1	- 5.0	+ 1.5
Hemlock	+ 1.2	- 8.7	+ 14.7
Building board	- 1.4	- 1.6	+ 9.8
Iron products group	+ 0.8	- 0.2	+ 4.3
Rolling mill products	+ 2.0	-	+ 6.5
Wire	+ 1.2	-	+ 6.4
Pipe and tubing	+ 0.6	- 0.2	+ 4.3
Scrap iron and steel	- 1.7	- 5.2	- 12.3
Animal products group	+ 0.5	- 0.5	- 0.6
Milk and its products	+ 2.7	-	+ 5.8
Fowl, dressed	+ 2.0	- 0.6	- 12.7
Animal oils and fats	+ 1.7	+ 3.7	- 8.4
Meats, cured	+ 0.5	- 0.2	- 15.8
Hides and skins	- 7.9	+ 0.3	- 6.7
Eggs	- 1.1	+ 3.9	- 15.4
Livestock	- 0.6	- 2.3	- 1.8
Meats, fresh	- 0.6	- 1.0	- 0.9

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved down 0.3% to 266.6 in July from the June index of 267.4. Prices were lower for six commodities, higher for nine and unchanged for fifteen. Principal changes included decreases for beef hides, raw rubber, raw wool and linseed oil, while increases were recorded for spruce lumber, hogs, domestic wheat, tin and copper.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets remained unchanged in July from the June index of 269.4. A decrease of 0.3% to 188.8 from 189.3 in the field products index reflected lower prices for barley, hay, wheat and corn on the Eastern market and for rye and flax in the West. Higher prices were shown for potatoes on both markets. The animal products index advanced 0.1% to 350.0 from 349.5 on higher prices for eggs on the Eastern market and for hogs on both Eastern and Western markets. Lower prices were shown for lambs and calves on both markets and for raw wool in the West.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) advanced 0.8% to 134.1 in July from 133.0 in June. This increase was somewhat larger than the average recorded between these two months in recent years. In July 1971, the index stood 2.8% above its level of twelve months earlier but 3.3% above that of December 1970. The Food index rose 2.2% in the latest month, reflecting higher prices for many items, particularly fresh vegetables. The Housing index advanced 0.6%, mainly because of increases in the indexes for homeownership, electricity, household textiles and postage. Higher prices for men's wear were the major factor in the 0.4% rise in the Clothing component, while Recreation and Reading edged up 0.1%. No change was registered in the indexes for Transportation, Health and Personal Care, and Tobacco and Alcohol. In the supplementary classification, the services index advanced 0.5% in the latest month, mostly because of increases recorded in the home-ownership element, dentists' fees, household help and postage rates, and in the train fare index. The index for non-durables (excluding food) rose 0.2% mainly as a result of higher prices for textile articles, gas and electricity; while the durables index was unchanged as lower new car prices were offset by higher furniture prices.

The Food index advanced 2.2% to 133.3 in July from 130.4 in June. This increase, the largest between these two months since 1967, contrasts with an increase of 0.5% over the same monthly period a year earlier. In the latest month, the price level of food consumed at home rose 2.5%, while restaurant meal prices moved up 0.8%. Within the food at home component, most major groups registered advances, the largest being for fresh vegetables which rose 9.2% in contrast with an overall advance of 0.1% for fresh fruit. Notable increases were recorded for, among other fresh vegetables, tomatoes (27.2%), onions (11.6%), potatoes (10.0%) and carrots (8.5%). The meat, fish and poultry index advanced 1.1%, but remained 2.2% below its level of a year earlier. Beef prices rose 1.3% in the latest month with all cuts priced contributing to the increase. However, pork edged down 0.1% between June and July, in response to special prices for bacon, to reach a level 14.4% below that of July 1970. The poultry index rose 3.8% reflecting an advance of nearly 5% in the price of chicken since the preceding month. Among staple foods, advances were recorded for flour (0.5%), butter (0.2%), and bread (0.2%). On the other hand, sugar prices declined 0.5% in the latest month. Most dairy product items registered advances, and increased quotations were also recorded for various miscellaneous foodstuffs including catsup (2.6%), jelly powder (2.3%), tea bags (2.0%), doughnuts (1.6%) and vegetable soup (1.1%). Margarine prices, however, fell 2.8% and egg prices declined 0.6% to reach a level 9.4% below that of a year earlier. While the Food index rose 6.1% during the seven months since December 1970, its latest level was 1.3% above that of July 1970.

The Housing index advanced 0.6% to 137.1 in July from 136.3 in June, reflecting increases of 0.5% in the shelter component and 0.6% in the household operation component. Within shelter, the homeownership element advanced 0.8%, while rents edged up 0.1%. Within household operation, the fuel and lighting index increased 0.5% as higher rates were recorded for electricity in Ottawa, Kingston, Hamilton, Windsor and Oshawa, and for gas in Calgary, Kingston and Sherbrooke. Higher wages were recorded for household help in a number of cities across the country, while an advance of over 10% in the postage index reflected some basic changes in the surface and air mail rate structure. Increased prices for scouring powder, floor wax and detergent led to a 0.3% rise in the household supplies index. Higher prices for towels and cotton sheets resulted in a 0.8% advance in the household textiles index, while the furniture index rose 0.3% mainly because of increased prices for living room suites and kitchen sets. Both the utensils and equipment and the floor coverings indexes were unchanged; the former because higher prices for dishes balanced reductions for light bulbs, the latter as a result of lower prices for linoleum offsetting increases for carpets. In the twelve months to July 1971, the Housing index has advanced 4.3%.

The Clothing index advanced 0.4% to 129.1 in July from 128.6 in June. The largest increase (0.9%) was recorded for the men's wear component, mainly as a result of higher prices for suits, business shirts, undershorts, slacks and topcoats. These increases were partially offset by reduced prices for windbreakers, work trousers and nylon socks. The women's wear index rose 0.3% as increased prices for pyjamas and a number of undergarments outweighed lower prices for hosiery and rayon dresses. The indexes for children's wear and footwear each rose 0.2%, the latter mainly as a result of higher prices for women's street shoes. On the other hand, sales on cotton and rayon dress material caused a 0.6% decline in the price of piece goods. In July 1971, the Clothing index stood 1.7% above its level of twelve months earlier.

The Transportation index remained unchanged in July from its June level of 130.1, as a 0.1% decline in the automobile operation component offset a seasonal increase in the train fare component. Amongst automobile operation items lower gasoline prices in a number of cities moved the price level down by 0.2%, but motor oil rose in price by 0.5%. New car prices dipped 0.1%, with usual decreases as the model year progresses more than offsetting higher prices for some models in short supply. In

the twelve months to July 1971 the Transportation index has increased 3.9%.

The Health and Personal Care index at 142.2 in July, was unchanged from the preceding month, as a 0.2% decline in personal care supplies' prices offset a 0.3% advance in dentists' fees, which was attributable to higher Manitoba dental charges. Lower prices for toilet soap, shaving cream and cleansing tissues led to the decrease in the personal care supplies index. Between July 1970 and July 1971, the Health and Personal Care index rose 1.7%.

The Recreation and Reading index edged up 0.1% to 135.5 in July from 135.4 in June as a result of higher newspaper prices in Charlottetown, Saint John, Quebec City, Sherbrooke and Kingston. In the twelve months to July 1971, the Recreation and Reading index advanced 2.3%.

The Tobacco and Alcohol index in July was unchanged from its June level of 128.7, and stood 1.7% above its level of July 1970. In the latest month, though the liquor index decreased marginally because of a minor adjustment in Ontario prices, this change was insufficient to move the component index.

Security Price Indexes (1961=100)

The Investors Index of common stock prices edged down 0.4% over last month to 150.0 from 150.6. Indexes for the three major groups declined, with industrials moving down 0.5% to 153.0, utilities down 0.3% to 147.9 and finance easing 0.2% to 141.2. Amongst the thirteen industrial sub-groups chemicals rose 7.9% to 94.2 followed by petroleum up 7.3% to 222.2. The biggest decrease was in industrial mines, which dropped 7.5% to 130.0, its lowest level, since December 1966. In utilities gas distribution was up 1.2% to 227.2, while telephone was down 2.3% to 94.9 on finance, banks registered no change while investment and loan eased down 0.7% to 106.3.

In the same period, the index of Mining stock prices edged up 0.1% to 109.8, as Golds rose 2.7% to 101.4, while Base Metals eased down 1.0% to 115.4.

Of the two supplementary price indexes, Uranium dropped 8.0% to 146.9 and Primary Oils and Gas rose 5.7% to 476.8, its highest since July of 1969.

The Preferred stock index edged up 0.4% to 69.3.

TABLE 1. Summary of Current Price Indexes

TABLE 4. Wholesale Price Indexes of Selected Primary Commodities(1)
(1935-39=100)

Primary commodities	Months				Annual averages		
	July 1971	June 1971	July 1970	June 1970	1970	1969	1968
Asbestos, crude	429.7	411.6	411.6	411.6	411.6	399.7	377.6
Beans, cocoa	540.8	555.4	678.6	638.9	752.7	1,032.8	788.2
Beans, coffee	303.6	307.0	391.1	387.5	391.7	302.6	285.0
Coal	210.3	210.3	210.3	210.3	210.3	210.3	208.8
Copper, electrolytic	501.1	494.1	550.1	550.1	541.6	483.6	447.5
Cotton, raw	294.1	294.5	280.0	283.5	282.0	276.3	308.2
Eggs	111.8	113.0	132.1	127.1	139.6	161.7	143.0
Fruits, fresh	210.6	216.5	214.7	197.3	229.6	225.8	257.1
Grains	198.9	196.7	187.9	189.7	193.7	200.4	210.2
Hides and skins	146.2	158.7	156.7	156.2	171.4	185.6	159.4
Lead, electrolytic	283.0	283.0	335.4	345.9	331.0	318.8	281.2
Livestock	383.8	386.1	390.9	399.9	396.2	400.3	354.8
Nickel	474.1	474.1	474.1	474.1	474.8	390.6	351.7
Oil, crude	199.8	199.8	195.3	195.3	195.7	191.0	191.6
Onions	197.9	159.1	293.9	327.4	261.6	221.9	276.2
Potatoes	259.7	224.7	406.3	325.8	247.2	170.5	184.3
Rubber, raw	109.2	120.5	133.0	143.1	140.8	179.3	137.2
Scrap iron and steel	282.9	287.8	322.5	340.1	328.9	250.0	252.7
Silver	413.2	428.2	445.0	442.6	478.1	497.5	602.8
Steers	552.9	554.9	514.0	512.4	510.8	496.6	453.5
Sugar, raw	169.7	170.5	166.4	167.2	160.9	144.1	102.4
Tin	326.5	321.3	325.1	336.8	349.6	338.0	305.8
Wool, raw domestic	136.4	137.4	154.8	156.2	152.4	169.1	156.4
Wool, raw, imported	135.6	136.3	149.9	149.9	149.3	163.0	158.8
Zinc, prime, western	355.8	355.8	344.7	344.7	341.0	326.1	300.2

(1) Indexes for 1971 are subject to revision.

(3) Weights used to combine wage rate series: (Source: Dept. of Labour):

Labourer	46
Carpenter	30
Painter	7
Electrician	5
Plumber	5
Bricklayer and Mason	3
Sheet Metal Worker	2
Truck Driver	2
Total	100

(4) Materials weighted 62.5, wage rates 37.5.

(5) Materials weighted 65.0, wage rates 35.0.

(6 & 7) National Income and Expenditure Accounts, Catalogue 13-001, quarterly.

(7) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity.

* For further detailed explanation see Prices and Price Indexes - May 1970.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1943-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501)

Price Index Numbers of Commodities and Services Used by Farmers

The index of Commodities and Services used by Farmers is designed to measure the change in retail prices of farm operating costs and farm living costs. It is calculated thrice yearly, viz.: January, April and August, and is on the base 1935-39=100. For an explanation of method of construction and an historical record, please refer to "Price Index Numbers of Commodities and Services Used by Farmers, 1913 to 1948 (Revised 1948)." A special bulletin giving total and group index detail is released subsequent to each pricing date.

Canadian Farm Products Price Index (1935-39=100)

Wheat prices used in the index are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Manitoba Northern at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board and quotations relating to No. 2 C.W., No. 3 C.W. and No. 1 Feed Oats and to Nos. 1 and 2 feed barley are included in the price index. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1969 - July 1970 were announced on February 4, 1971 for oats and barley, and on June 17, 1971 for wheat.

Unit	Initial and total participation payments 1969-70 and 1970-71			
	August 1969 - July 1970		August 1970 - July 1971	
	Initial payment (1)	Total participation payment (2)	Initial payment	Total participation payment (3)
dollars				
Wheat				
No. 1 Manitoba Northern	bushel	1.70	1.57	
No. 2 Manitoba Northern	"	1.66	1.55	
No. 3 Manitoba Northern	"	1.62	1.47	
Oats				
No. 2 C.W.	bushel	.65	.70	
No. 3 C.W.	"	.62	.67	
No. 1 Feed Oats	"	.60	.65	
Barley				
No. 1 Feed	bushel	.97	.83	
No. 2 Feed	"	.94	.81	

(1) Used in original indexes from August 1969 to July 1970. (2) Incorporated retroactively in revised final indexes August 1969 to July 1970. (3) Not yet announced by Wheat Board.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of Prices and Price Indexes, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators(1) providing an estimate of price change for the output of the industry), derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Price Indexes of Machinery & Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Highway Construction Price Indexes (1961=100) (1)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956=100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problems of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or up-dating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

(1) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as non-municipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations.

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Retail Price Indexes

Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated to 1949=100 from 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

Full details on the latest weighting patterns and time base revisions are available in the occasional paper "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures", Catalogue 62-518 and in the January, 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue 62-002.

Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are similar in concept and item coverage to the Consumer Price Index for Canada except for their individual weighting systems.

Each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 13 of this publication and the relevant explanatory note on page 63.

Historical Consumer Price Indexes (1969=100) for Thunder Bay and Quebec City are available with explanatory notes, on request, from Retail Prices Section, Prices Division, Statistics Canada.

Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100.00 to 110.0. Because of the 10 per cent rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 per cent rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is \$90.91 ($100.00/110.0 \times 100.0$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 ($90.91/80.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 13.6 per cent more goods and services than those received in week A, in spite of a 10 per cent rise in consumer prices. This 13.6 per cent increase in real wages compares with the rise of 25 per cent in money wages ($100.00/80.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax, pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

Indexes of Retail Price Differentials

Statistics previously published relating to differences in retail prices between Canadian cities had been limited to indexes measuring comparative food price levels. Table 13 summarizes the results of a detailed revision of earlier urban place-to-place food indexes and expands the scope of spatial retail price measurements to take in other elements of the family budget. A fuller explanation of the study from which this table is derived, including more details of these inter-city price comparisons, are contained in the November 1968 and November 1969 issues of Prices and Price Indexes (Catalogue 62-002). In all, inter-city price comparisons were drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based. Major omissions are shelter (both rented and owned), domestic utilities (fuel, light and water), and restaurant meals. While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require a good deal more research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. The up-dating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening period as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

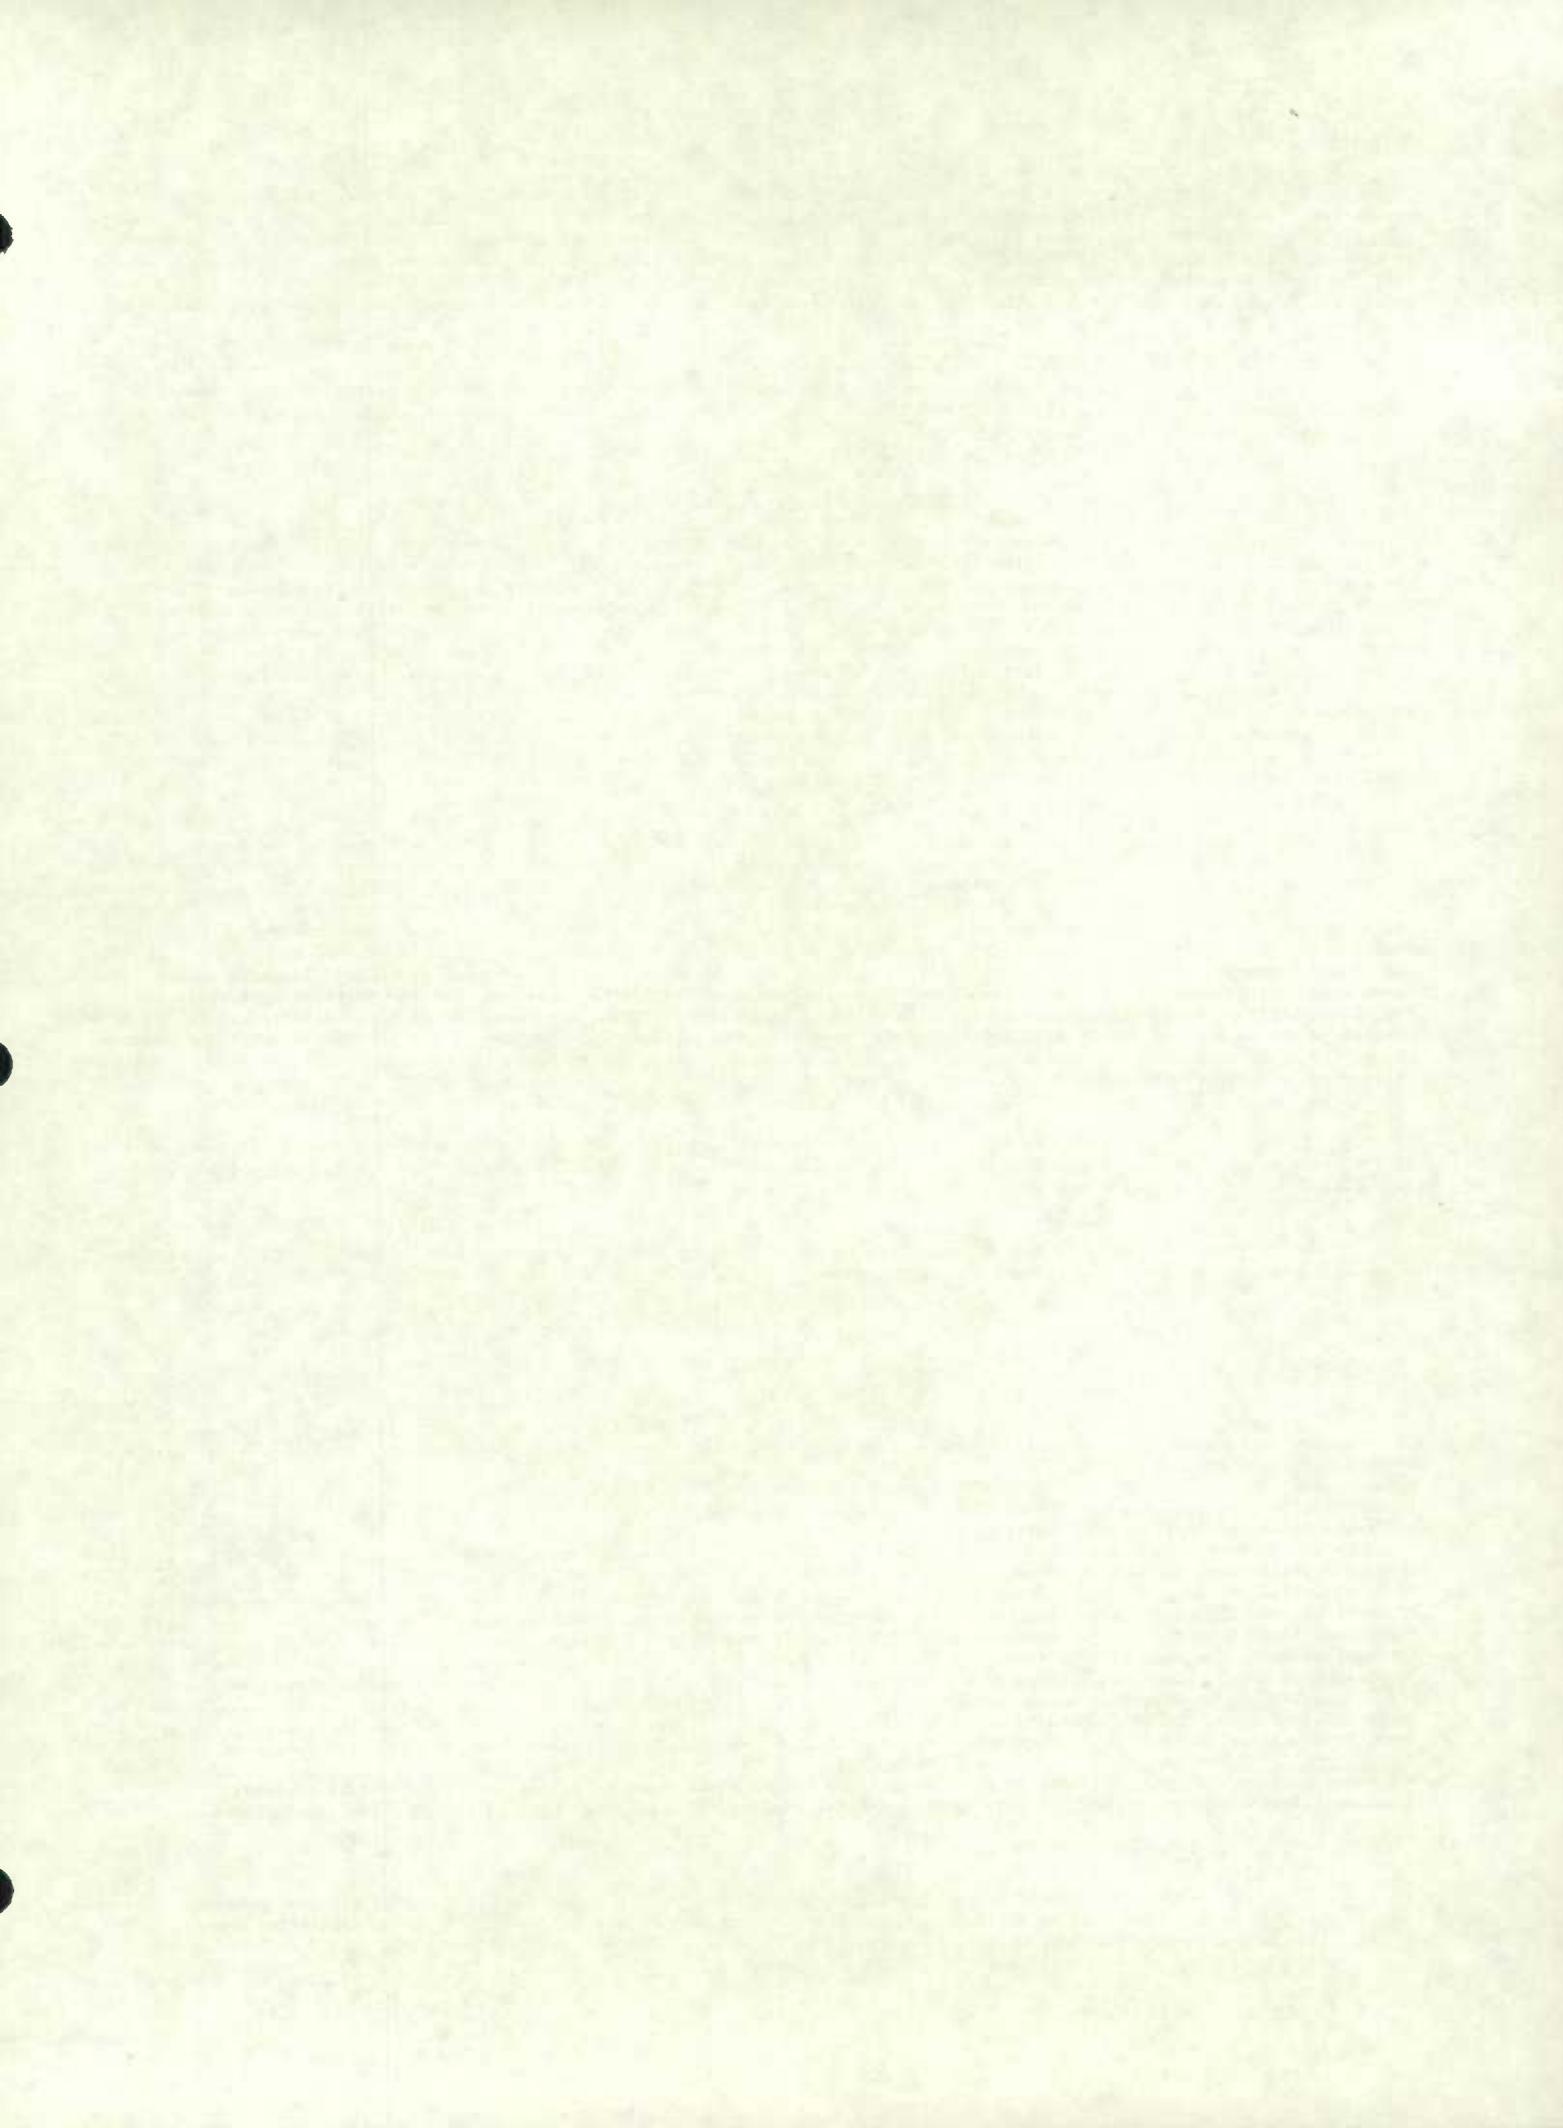

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.
