NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Indexes (1961=100)

Industry selling price indexes were higher in August than in July for 34 manufacturing industries, lower for 22 and unchanged for 44.

In terms of the relative importance of industries within manufacturing the more notable changes in August were increases recorded in the foods and beverages group reflecting higher price levels for the slaughtering and meat packing plants, also the butter and cheese plants. Prices were noticeably higher in the wood products group with the most pronounced increases occurring in the sawmills, and veneer and plywood mills industries. Declines for the period were most significant in the primary metals group due mainly to the smelting and refining industry which dropped back after advances in the two previous months, and in the paper and allied industries group where the pulp and paper mills industry index level fell back to that of May after the sharp rise in June.

The arithmetic average of the 100 industry indexes increased in August to 123.5 from 123.4 in July. The average (unweighted) increase for those industries showing higher price movements was 0.7%, while the comparable figure for those showing decreases was 0.8%.

July to August Changes in Industry Indexes

	August/July			Major group indexes		
	Number of industries			August 1971	July 1971	August 1970
	In- creases	De- creases	Un- changed			
All industries	34	22	44	(1)	(1)	(1)
Foods and beverages industries	11	5	7	127.6	126.9	123.9
Tobacco and tobacco products industries	-	-	1	(1)	(1)	(1)

Miscellaneous manufacturing industries...	1	-	4	(1)	(1)	(1)

(1) Indexes not available at this level of aggregation.

General Wholesale Index (1935-39=100)

The general wholesale index moved up 0.3% in August to 292.0 from the July index of 291.0. It was 2.8% higher than the August 1970 index of 284.1. Four of the eight major group indexes were higher, three declined, while the remaining one, non-metallic mineral products was unchanged at 226.7.

The animal products group index rose 1.7% in August to 327.9 from 322.5 on higher prices for fresh meats, livestock, fishery products and milk and its products. A rise of 1.1% to 403.4 from 399.0 in the wood products group index reflected price increases for cedar, spruce, and fir. Increases of 0.1% or less occurred in two major group indexes: iron products to 318.2 from 317.9, and textile products to 262.3 from 262.2.

The vegetable products group index moved down 0.8% to 236.0 from 238.0 mainly on lower prices for grains, rubber and its products and potatoes. A decline of 0.3% to 262.2 from 263.0 in the non-ferrous metal products group index was chiefly attributable to lower prices for copper and its products. The chemical products group index moved 0.2% lower to 240.0 from 240.5.

The following table shows some of the more noteworthy changes:

Commodity group and sub-group	Percentage changes		
	<u>August 1971</u> July 1971	<u>August 1970</u> July 1970	<u>August 1971</u> August 1970
Animal products group	+ 1.7	- 0.7	+ 1.8
Eggs	+ 7.4	+ 2.9	- 11.6
Meats, fresh	+ 3.0	- 2.6	+ 4.8
Fishery products	+ 2.9	+ 2.4	+ 1.8
Livestock	+ 1.5	- 2.7	+ 2.4
Milk and its products	+ 1.5	+ 0.3	+ 7.0
Hides and skins	- 1.7	- 0.6	- 7.7
Meats, cured	- 0.6	+ 0.5	- 16.7
Wood products group	+ 1.1	- 1.6	+ 8.2
Spruce	+ 8.5	+ 1.4	+ 33.9
Cedar	+ 4.9	+ 0.2	+ 29.3
Pine	+ 2.1	-	+ 6.3
Fir	+ 2.0	- 8.6	+ 12.0
Building board	- 4.3	-	+ 5.1
Woodpulp	- 1.3	- 0.8	- 0.6
Vegetable products group	- 0.8	- 0.7	- 0.4
Potatoes	- 9.4	- 23.7	- 24.1
Grains	- 4.8	- 0.7	+ 1.5
Fruits, dried	- 4.4	-	- 11.2
Rubber and its products	- 1.6	- 0.6	+ 0.5
Livestock and poultry feeds	+ 7.4	+ 10.2	+ 8.4
Fruits, fresh	+ 6.7	+ 1.3	+ 3.4

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, advanced 0.3% to 267.4 in August from the July index of 266.6. Prices were higher for eight commodities, lower for six and unchanged for sixteen. Principal changes included increases for rosin, domestic zinc, fir timber and hogs, while decreases were recorded for oats, domestic wheat, tin, iron ore, bleached sulphite pulp and spruce lumber.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets advanced 0.8% to 264.6 in August from the July index of 262.6. An increase of 1.1% to 177.2 from 175.3 in the field products index reflected higher prices for potatoes on the Eastern market, and for hay in the West. Lower prices were shown for wheat on both markets, for oats, hay, barley, and corn in the East and for potatoes, rye, and flax in the West. The animal products index advanced 0.6% to 352.0 from 350.0 on higher prices for eggs and hogs on both Eastern and Western markets, and for fluid milk in the East. Lower prices were shown for calves on both markets, for lambs in the East and steers in the West.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) increased 0.7% to 135.0 in August from 134.1 in July. This advance brought the index to a level 3.4% above that of August 1970, thus registering the largest twelve month increase since the period ending in May 1970. In the latest month all major components registered increases except Clothing which declined 0.2%. The major contributor to the advance in the all-items index was a 2.0% increase in the Food index. Among the other components that increased, Tobacco and Alcohol rose 0.7%, Transportation 0.5%, Housing 0.3%, Recreation and Reading 0.2%, and Health and Personal Care 0.2%.

Classified by goods and services, the commodities index advanced 0.8% while that for services rose 0.5%. Within commodities, non-durables excluding food edged up 0.1% while durables declined 0.3%, the former partly because higher prices for cigarette tobacco, beer, curtains, pharmaceuticals and household supplies outweighed lower prices for fuel oil and clothing; the latter mainly as a result of lower prices for new cars, furniture and carpets. The rise in the services index was mostly attributable to higher insurance rates, theatre and football admissions, taxi fares and dentists' fees.

The Food index increased 2.0% to 135.9 in August from 133.3 in July, the largest July to August advance in over a decade, and which compares with an average increase between these two months in the preceding five years of 1.2%. This latest increase brought the food index to a level 8.2% above that of December 1970 and 3.0% above that of August 1970. The food consumed at home component increased 2.2% in the latest month and the only major element in this component that registered a decrease was vegetables which declined 6.5% with lower prices for, among other items, cabbages, lettuce, carrots and tomatoes. Fruit prices, however, advanced 2.2% with higher quotations for apples (8.9%), and frozen (2.6%) and canned (1.9%) orange juice; on the other hand, fresh oranges and bananas registered price declines of 2.6% and 1.7% respectively. Egg quotations advanced 1.7% between July and August 1971, but to a level nearly 14% below that of August 1970. An increase of 1.6% in the index for dairy products was mainly attributable to a 1.9% increase in fresh milk prices, though higher prices were also recorded for processed (1.4%) and cheddar (1.2%) cheese, and powdered milk (0.9%). The meat, fish and poultry component advanced 1.0% with price increases of 2.5% for poultry, 1.6% for pork, and 0.5% for beef. The price of bakery and cereal products moved up 0.6% reflecting increases for bread (1.1%), cake mix (1.9%), and sweet biscuits (1.3%). Among other food items, the price of butter rose 0.7%, peanut butter 0.7%, salad dressing 0.8%, honey 1.3%, regular coffee 1.7%, and catsup 2.3%. On the other hand, margarine prices dropped 2.6%, soft drinks 1.1%, and tea bags 1.2%. Restaurant meal prices advanced 0.8% in the latest month to a level 4.5% above that of a year earlier.

The Housing index rose 0.3% to 137.5 in August from 137.1 in July, as a 0.5% increase in the shelter component outweighed a 0.1% decline in the household operation component. Within shelter, both the rent and homeownership elements advanced, the latter mainly because of a rise of 1.7% in new houses prices, 4.5% in the dwelling insurance index, and 0.6% for repair charges. Within household operation, fuel oil prices decreased 0.7% as declines in Montreal, Hull and Ottawa outweighed increases in Québec City and London. Sales were the main cause of a 1.2% decrease in the furniture index as declines were recorded for bedroom suites (2.0%), dinette suites (1.4%), living room suites (0.8%), and kitchen sets (0.4%), while scattered reductions for carpets decreased the floor coverings index 0.6%. On the other hand, higher prices for curtains in Toronto and Vancouver moved the textiles index up 0.4%, while increased rates in Ottawa and Toronto were chiefly responsible for a 3.8% advance in the household effects insurance index. Among other housing items, the price of toilet paper rose 2.4%, scouring powder 1.3%, soap flakes 1.1%, light bulbs 0.9% and bleach 0.9%. In the twelve months to August 1971, the Housing index advanced 4.6%.

The Clothing index, which normally decreases at this time of year, dipped 0.2% to 128.8 in August from 129.1 in July. The only component registering an increase was women's wear which rose 0.3% with higher prices for underwear, hosiery and sweaters. The men's wear component declined 1.3% mainly because of sales on men's suits, and sale prices were also recorded for undershorts, pyjamas, and work shirts and socks. However, higher prices were registered for, among other items, sport shirts, slacks, and nylon socks. The indexes for children's wear and piece goods both edged down 0.1%, the former partly because of sales on girls' cotton dresses and infants' overalls, the latter as a result of sales for wool dress material. The footwear component remained unchanged over the month as higher prices for children's shoes offset reductions for women's shoes. Between August 1970 and August 1971, the Clothing index advanced 2.1%.

The Transportation index increased 0.5% to 130.7 in August from 130.1 in July mainly as a result of a 0.6% advance in the automobile operation component. Among automobile operation items, insurance rates increased 3.4%, while the price of motor oil rose 0.5%, and gasoline 0.1%. On the other hand, new car prices declined 0.2% as the end of the model year approaches. Within the other transportation

components, there was an increase in the train fares index, and taxi fares rose 0.3% as increases in Calgary and Peterborough outweighed the removal of an experimental surcharge in Sherbrooke. In the twelve months to August 1971, the Transportation index has increased 4.3%.

The Health and Personal Care index rose 0.2% to 142.5 in August from 142.2 in July. The health care component moved up 0.3% because of a 0.4% increase in pharmaceuticals prices together with higher dentists' fees in Alberta. A number of pharmaceutical items recorded increases, the most notable being for headache tablets (3.0%), vitamins (2.6%), ointments (0.9%), and antiseptics (0.8%). The personal care component edged up 0.1% with higher charges for men's haircuts in Regina and women's hairdressing in Halifax, Trois Rivières and Brantford. Further, personal care supplies prices rose 0.2% with higher prices for toothpaste (1.6%), cleansing tissues (1.6%), face powder (1.3%), face cream (1.2%), and shaving cream (1.0%). However, reductions were recorded for toilet soap (1.4%) and toothbrushes (0.7%). In August 1971, the Health and Personal Care index stood 1.6% above its level of August 1970.

The Recreation and Reading index rose 0.2% to 135.8 in August from 135.5 in July, mainly as a result of increased motion picture admission charges in Toronto and Sherbrooke, and higher football admissions in Montreal. On the other hand, the price of camera film including processing declined 0.3%. Between August 1970 and August 1971, the Recreation and Reading index increased 2.5%.

The Tobacco and Alcohol index advanced 0.7% to 129.6 in August from 128.7 in July. The alcoholic beverage index increased 1.1% as higher beer prices in Quebec and Newfoundland outweighed some lower liquor prices in eastern Canada. The tobacco component rose 0.3% as a decrease in the package weight in certain cities resulted in an effective price rise of 4.1% for cigarette tobacco. However, mixed price movements across the country resulted in a marginal decrease in the cigarette index. In the twelve months to August 1971, the Tobacco and Alcohol index rose 2.5%.

Security Price Index (1961=100)

The Investors index of common stock prices dropped 1.2% over July to 148.2 from 150.0. Within the three major groups, industrials decreased 1.3% to 151.0, with utilities easing 1.4% to 145.8 and finance easing 0.3% to 140.8. Amongst the thirteen industrial sub-groups decreases were registered in all but two, the largest decrease being industrial mines, down 7.5% to 120.3. The range of the decreases was from 4.4% for primary metals to 0.1% for beverages. In utilities all sub-groups dropped with the exception of pipelines which edged up 0.7% to 168.8. In finance, banks edged 0.2% to 164.4 while investment and loan decreased 1.8% to 104.4.

In the same period, the index of Mining stock prices fell 2.5% to 107.1 with Golds easing 0.1% to 101.3 and Base Metals dropping 3.6% to 111.2.

Of the two supplementary price indexes, Uranium eased 2.0% to 144.0 and Primary Oils and Gas edged up 0.8% to 480.7.

The Preferred stock index declined 1.3% to 68.9, it's lowest level since November of 1970.

1961	100.0	100.0	100.0	100.0	100.0	100.0	100.0
1962	109.1	98.2	99.3	110.2	108.0	98.4	95.2
1963	101.1	95.9	102.2	126.5	120.2	102.7	96.9
1964	108.4	96.4	103.7	123.7	123.7	116.8	106.1
1965	119.5	116.8	103.2	144.0	133.3	144.4	127.7
1966	129.6	116.1	103.6	157.4	152.9	168.1	129.7
1967	115.2	122.7	103.0	156.3	153.8	137.6	119.4
1968	120.8	119.9	101.8	151.5	140.8	124.9	126.8
1969	116.5	123.1	102.2	154.0	144.6	132.1	143.8

(1) Major components for the provincial indexes were presented in the November 1970 issue of Prices and Price Indexes. (2) The years referred to are fiscal years. For example, 1956 represents the period April 1, 1956 to March 31, 1957. (3) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Highways. The item content of the two indexes is substantially different. * To assist comparison with other published series the indexes presented below have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request.

TABLE 18. Base-weighted Highway Construction. Price Indexes All-Items and Major Components Quebec, Annually, 1964-forward(1) (1964=100)

(6 & 7) National Income and Expenditure Accounts, Catalogue 13-001, quarterly.

(†) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity.

(*) The indexes as originally published utilized the weights given above in the preparation of the fixed-weighted composite indexes. Because of the arithmetic rebasing of the indexes to the 1961=100 base, users can no longer apply the published weights to the indexes in columns 1, 2 & 3 and obtain the indexes given in columns 4 & 5.

* For further detailed explanation see Prices and Price Indexes - May 1970.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961-100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501)

Price Index Numbers of Commodities and Services Used by Farmers

The index of Commodities and Services used by Farmers is designed to measure the change in retail prices of farm operating costs and farm living costs. It is calculated thrice yearly, viz.: January, April and August, and is on the base 1935-39=100. For an explanation of method of construction and an historical record, please refer to "Price Index Numbers of Commodities and Services Used by Farmers, 1913 to 1948 (Revised 1948)." A special bulletin giving total and group index detail is released subsequent to each pricing date.

Canadian Farm Products Price Index (1935-39=100)

Wheat prices used in the index are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Manitoba Northern at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board and quotations relating to No. 2 C.W., No. 3 C.W. and No. 1 Feed Oats and to Nos. 1 and 2 feed barley are included in the price index. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1969 - July 1970 were announced on February 4, 1971 for oats and barley, and on June 17, 1971 for wheat.

Unit	Initial and total participation payments 1969-70 and 1970-71			
	August 1969 - July 1970		August 1970 - July 1971	
	Initial payment (1)	Total participation payment (2)	Initial payment (3)	Total participation payment (4)
dollars				
Wheat				
No. 1 Manitoba Northern	bushel	1.50	1.57	1.50
No. 2 Manitoba Northern	"	1.46	1.55	1.46
No. 3 Manitoba Northern	"	1.41	1.47	1.41
Oats				
No. 2 C.W.	bushel	.60	.70	.60

Barley				
No. 1 Feed	bushel	.81	.83	.81
No. 2 Feed	"	.78	.81	.78

(1) Used in original indexes from August 1969 to July 1970. (2) Incorporated retroactively in revised Final Indexes August 1969 to July 1970. (3) Used in indexes August 1970 to present. (4) Not yet announced by Wheat Board.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of Prices and Price Indexes, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators(1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Price Indexes of Machinery & Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Highway Construction Price Indexes (1961=100) (1)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956=100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problems of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or up-dating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

(1) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as non-municipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations.

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction; interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the Globe and Mail and the Montreal Gazette. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed DBS indexes. The indexes express prices as a percentage of prices in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Investors Index and Preferred Index, see Prices and Price Indexes for February 1971.

Retail Price Indexes

Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated to 1949=100 from 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

Full details on the latest weighting patterns and time base revisions are available in the occasional paper "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures". Catalogue 62-518 and in the January, 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue 62-002.

Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are similar in concept and item coverage to the Consumer Price Index for Canada except for their individual weighting systems.

Each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 13 of this publication and the relevant explanatory note on page 63.

Historical Consumer Price Indexes (1969=100) for Thunder Bay and Quebec City are available with explanatory notes, on request, from Retail Prices Section, Prices Division, Statistics Canada.

Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100.00 to 110.0. Because of the 10 per cent rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 per cent rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is \$90.91 ($100.00/110.0 \times 100.0$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 ($90.91/80.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 13.6 per cent more goods and services than those received in week A, in spite of a 10 per cent rise in consumer prices. This 13.6 per cent increase in real wages compares with the rise of 25 per cent in money wages ($100.00/80.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax, pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

Indexes of Retail Price Differentials

Statistics previously published relating to differences in retail prices between Canadian cities had been limited to indexes measuring comparative food price levels. Table 13 summarizes the results of a detailed revision of earlier urban place-to-place food indexes and expands the scope of spatial retail price measurements to take in other elements of the family budget. A fuller explanation of the study from which this table is derived, including more details of these inter-city price comparisons, are contained in the November 1968 and November 1969 issues of Prices and Price Indexes (Catalogue 62-002). In all, inter-city price comparisons were drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based. Major omissions are shelter (both rented and owned), domestic utilities (fuel, light and water), and restaurant meals. While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require a good deal more research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. The up-dating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening period as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.
