INTRODUCTION

A revision of the Security Price Indexes on the base of 1971 = 100 has been made. It involves changes in the composition and method of calculation of the indexes as well as a shift in the price reference base from 1961 to 1971.

Definition and Selection Criteria

Security Price Indexes measure through time the effect of price change on the value of a portfolio of Canadian stocks bought and held for investment purposes. The system of Security Price Indexes comprises the Investors Index, the Mining Index, two supplementary indexes (Primary Oil and Gas, and Uraniums) and the Preferred Stock Index. These indexes consist of stocks which fulfill the following criteria:

1. They must be Canadian stocks traded on at least one Canadian exchange.
2. Selected securities must bear an annual dividend.
3. The volume of annual transactions must represent at least 10% of issued stocks listed at the beginning of each calendar year; theoretically, transactions should be distributed evenly throughout the year under examination.
4. The quotations of each security must exceed \$1.00.
5. Eligible issues for the Mining Index and the two supplementary indexes, Primary Oil and Gas, and Uranium, must be of companies owning producing mines and wells.

Accordingly, some stocks previously listed have been deleted, others added. The four common stock indexes now include 158 stocks and the preferred stock index consists of 29 stocks. Although the above criteria are strictly applied in most cases, discretion is sometimes exercised in order to ensure the continuity of the series. For a complete list of the stocks included in the indexes see Appendix C.

The stocks listed in the revised indexes are classified according to the Standard Industrial Classification (Revised 1970). The use of this grouping is based on the assumption that stocks in the same industrial classification are homogeneous in their price movements.

Two new sub-groups have been established as part of the Investors Index: Radio and Television Broadcasting has been added to Utilities while Insurance has been added to the Finance group. Also the order of the sub-groups has been rearranged and two sub-groups (Alcoholic Beverages and Trade) have undergone minor name changes.

Index Formula, Prices, and Weights

As was previously the case, the indexes are calculated using the Laspeyres index formula:

$$I_t = \frac{\sum_{i=1}^n \left(\frac{P_{t_i}}{P_{o_i}} \cdot Q_{o_i} \right)}{\sum_{i=1}^n Q_{o_i}} \times 100$$

where I_t = price index in time t for a sub-group

P_{t_i} = price in time t for the i th stock

P_{o_i} = average price in base year (1971) for the i th stock

Q_{o_i} = number of shares outstanding in base year (1971) for the i th stock

n = number of stocks included in sub-group.

Une révision de l'indice des cours des valeurs mobilières sur la base 1971 = 100 a été faite. Des changements ont été ainsi apportés à la composition et à la méthode du calcul des indices et la base de référence des prix 1961 a été changée en celle de 1971.

Définition et critères de sélection

Les indices des cours des valeurs mobilières mesurent dans le temps les effets du mouvement des prix sur les valeurs d'un portefeuille d'actions achetées et détenues aux fins de placements. Le système des indices des cours des valeurs mobilières comprend l'indice des cours des actions ordinaires, l'indice des prix des titres miniers, deux indices supplémentaires (pétrole et gaz, uranium) et l'indice des actions privilégiées. Ces indices comprennent des actions qui doivent répondre aux critères suivants.

1. Il doit s'agir d'actions canadiennes cotées à au moins une bourse du Canada.
2. Les valeurs mobilières choisies doivent rapporter des dividendes annuels.
3. Le nombre des transactions annuelles doit représenter au moins 10 % des actions émises et cotées au début de chaque année civile; en théorie, les transactions devraient être réparties également sur toute l'année de l'enquête.
4. La cote de toute valeur mobilière doit être supérieure à un dollar.
5. Les actions de l'indice des prix des titres miniers et des deux indices supplémentaires (pétrole et gaz, uranium) doivent provenir de sociétés à qui appartiennent des mines et des puits producteurs.

C'est ainsi que certaines actions qui faisaient partie de l'indice ont été retirées et que d'autres ont été ajoutées. Les quatres indices des actions ordinaires comprennent maintenant 158 actions et l'indice des actions privilégiées est formé de 29 actions. Même si ces critères de sélection sont appliqués strictement dans la plupart des cas, il est possible que parfois ils ne soient pas respectés de façon à assurer la continuité des séries. La liste complète des actions faisant partie des indices figure à l'annexe C.

Les actions faisant partie des indices révisés sont classées selon la classification des activités économiques de 1970. L'utilisation de ce regroupement est basée sur l'hypothèse selon laquelle les actions d'une même classification économique sont homogènes lorsque leurs prix varient.

Deux nouveaux sous-groupes ont été créés en tant que partie de l'indice des cours des actions ordinaires: la radio-diffusion et la télédiffusion ont été ajoutées aux services tandis que les assurances ont été ajoutées au groupe des finances. Par ailleurs, l'ordre des sous-groupes a été modifié et le nom de deux d'entre eux (boissons alcooliques et commerce) a été changé.

Formule des indices, prix et pondération

Comme avant, les indices sont calculés d'après la formule de Laspeyres:

où I_t = indice de prix à l'époque t pour le sous-groupe considéré

P_{t_i} = prix à l'époque t de la i ème action

P_{o_i} = prix moyen pour l'année de base (1971) de la i ème action

Q_{o_i} = nombre d'actions en circulation pour l'année de base (1971) de la i ème action

n = nombre d'actions d'un sous-groupe particulier.

The major departures from the methodology of the previous indexes are as follows:

1. The prices used in the calculation of the weekly common stock indexes are no longer Thursday's closing quotations. They are now the daily closing quotations from the exchange with the highest volume of shares traded for each stock, averaged over the number of trading days in the particular week. For preferred stock, prices used are the monthly weighted averages of daily closing quotations in which the weights are the daily total sales.
2. Weighting at the finest level of detail (the individual securities) remains proportional to the number of shares outstanding as of January 1 of each year. The weights of major groups and sub-groups, however, have been calculated in the 1971 = 100 series according to a formula which modifies the value of the shares outstanding in 1971 by the trading experience in the period 1971 to 1974. This reduces the importance given to stocks held by parent or investment companies for control purposes and which therefore are not available for trading. The weights used are thus proportional to the number of shares actually traded on the market over a period of four years. (See Appendix A.)

Weight of a sub-group

$$= \sum_{i=1}^n \left(\bar{P}_{o_i} \times Q_{o_i} \right) \times \frac{\bar{V}_i}{Q_{o_i}} = \sum_{i=1}^n \left(\bar{P}_{o_i} \times \bar{V}_i \right)$$

where \bar{P}_{o_i} = average price of the i^{th} stock in base year.

Q_{o_i} = number of shares outstanding of i^{th} stock in base year.

\bar{V}_i = average yearly volume of shares traded of i^{th} stock for the period 1971-1974

n = number of stocks in a particular sub-group.

In the case of the annual revision, a change in portfolio composition, or a stock split, the adjustments are made in such a way that the index level remains unaffected by the change.

Continuity between 1971 and 1961 Series

Correction factors allowing for conversion of 1961 = 100 based indexes to 1971 = 100 based indexes have been calculated for every major group and sub-group in the common and preferred stock indexes (see Appendix B). Adjustment of the security price series can be made for any data based on 1961 = 100 up to December 1970 inclusively. The procedure merely requires the multiplication of a given index on the base 1961 = 100 by its appropriate correction factor to relate the index to that based on 1971 = 100. From January 1971 on the data has been revised. See Appendix D for monthly indexes from January 1971 to May 1975 and Appendix E for weekly indexes from January 1975 to present. The charts in Appendix F illustrate the movement of the four common stock indexes for January 1971 to May 1975.

Since both Radio and Television Broadcasting and Insurance sub-groups have been introduced at the time of the 1971 revision no data are available prior to January 1971.

The weekly indexes will continue to appear in the Statistics Canada Daily bulletin. The monthly indexes, an arithmetic average of the weekly indexes, will be published in Prices and Price Indexes, Catalogue 62-002.

Les principales dérogations à la méthodologie des indices précédents sont les suivantes:

1. Les prix servant au calcul des indices hebdomadaires ne sont plus les cours de clôture du jeudi, mais les cours quotidiens de clôture pour la bourse où le volume des transactions est le plus élevé pour chaque titre. Ils sont ensuite mis en moyenne selon le nombre de jours ouvrables de la semaine en question. En ce qui concerne les actions privilégiées, les prix utilisés sont les moyennes mensuelles pondérées des cours quotidiens de clôture dans lesquels les pondérations sont les ventes totales quotidiennes.
2. La pondération au niveau de détail le plus fin (les titres proprement dits) est proportionnelle au nombre d'actions en circulation au premier janvier de chaque année. Les pondérations des groupes principaux et des sous-groupes, cependant, ont été calculées, pour ce qui est des séries 1971 = 100, selon une formule qui modifie la valeur des titres en cours en 1971 en fonction de l'évolution des marchés pendant la période 1971-1974. Ceci réduit l'importance accordée aux actions détenues par des sociétés mères ou des sociétés de placements dans le but de s'assurer le contrôle. Ces actions, par conséquent, ne sont plus disponibles sur le marché. Les pondérations utilisées sont ainsi proportionnelles au nombre d'actions vendues sur les bourses au cours d'une période de quatre années. (Voir annexe A.)

Pondération d'un sous-groupe.

où \bar{P}_{o_i} = cours moyen de la i^{th} action en l'année de base
 Q_{o_i} = nombre d'actions en cours de la i^{th} action en l'année de base.
 \bar{V}_i = volume annuel moyen des transactions de la i^{th} action pour la période 1971-1974
 n = nombre d'actions d'un sous-groupe particulier.

Dans le cas de la révision annuelle, d'un changement dans la composition du portefeuille ou d'un fractionnement des actions, les ajustements sont effectués de telle façon que le niveau de l'indice ne change pas.

Continuité entre les séries de 1961 et de 1971

Les facteurs de conversion des indices base 1961 = 100 en indices base 1971 = 100 ont été calculés pour chaque groupe principal et sous-groupe tant pour les actions ordinaires que pour les actions privilégiées (voir annexe B). L'ajustement des séries sur les cours des valeurs mobilières peut être effectué pour toute donnée exprimée sur la base 1961 = 100 jusqu'en décembre 1970 inclusivement. Pour effectuer cette conversion, il suffit de multiplier un indice donné sur la base 1961 = 100 par le facteur de correction approprié pour relier l'indice à celui sur la base 1971 = 100. À partir de janvier 1971, les données ont été révisées. Le lecteur peut se reporter à l'annexe D pour les indices mensuels de la période janvier 1971-mai 1975 et l'annexe E pour les indices hebdomadiers de la période commençant en janvier 1975. Les graphiques de l'annexe F indiquent les mouvements des indices des quatre indices des actions ordinaires pour la période janvier 1971-mai 1975.

Comme les sous-groupes de la radiodiffusion et télé-diffusion et des assurances ont été introduits lors de la révision de 1971, aucune donnée n'existe pour la période précédant janvier 1971.

Les indices hebdomadiers continueront à paraître dans le Quotidien de Statistique Canada, tandis que les indices mensuels, moyenne arithmétique des indices hebdomadiers, seront présentés dans la publication Prix et indices des prix (n° 62-002 au catalogue).

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) rose 0.8% in May 1975 to 190.6 from the revised April 1975 index of 189.1. It was 13.1% higher than the May 1974 index of 168.5.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the food and beverages group (1.0%) with advances in slaughtering and meat packing industry (10.7%). Upward movement in the sawmills and planing mills industry (5.9%), moved the wood products group higher (4.0%). Notable increases to a lesser degree were registered in paper and allied products (1.3%).

Decreases for the period were relatively insignificant.

NOTES SUR LES PRIX ET LES NOMBRES INDICES DES PRIX

Indice des prix de vente dans l'industrie: industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie (pour toutes les industries manufacturières) a augmenté de 0.8% pour passer de 189.1 en avril 1975 (indice rectifié) à 190.6 en mai. L'indice était de 13.1% supérieur à celui de mai 1974 (168.5).

Pour ce qui est de la contribution relative à la hausse générale de l'indice de toutes les industries manufacturières, c'est dans le groupe des industries des aliments et des boissons que l'on a enregistré les changements les plus appréciables (progession de 1.0%), en raison des augmentations notées dans le cas de l'abattage et du conditionnement de la viande (10.7%). On a enregistré une augmentation de 5.9% dans le secteur des scieries ce qui a fait progresser le groupe des produits du bois de 4.0%. Des augmentations appréciables, mais dans une moindre mesure, ont été enregistrées dans le cas du groupe de l'industrie du papier et activités annexes (1.3%).

Les baisses enregistrées ce mois-ci ont été relativement peu importantes.

General Wholesale Price Index (1935-39 = 100)

The general wholesale index rose 0.4% to 484.8 in May 1975 from the revised April index of 482.9. It was 6.7% higher than a year earlier. Five of the eight major groups increased while three decreased.

The animal products group index jumped 7.0% in May to 534.5 from the revised April index of 499.4 due mainly to higher prices recorded for livestock 19.8%, fresh meats 16.8%, eggs 7.2%, dressed fowl 4.8% and cured meats 2.7%. The wood products group index increased 3.4% to 657.5 from the revised April index of 636.0, with increases in spruce 8.6%, fir 7.8%, cedar 7.7%, hemlock 5.8% and newsprint and wrapping paper 2.0%. The non-ferrous metals group index increased 0.9% due to a 8.9% increase in silver and a 1.2% increase in nickel. The textile products showed an increase of 0.8% due to a rise in the price of raw wool (imported) 9.3%, raw wool (domestic) 5.2% and raw cotton 3.3%. The non-metallic minerals group index rose 0.5%.

The vegetable products group showed a decline of 6.9% in May to 439.9 from the revised April index of 472.5, due to lower prices recorded for sugar and its products 24.6%, grains 10.8% and fresh fruits 10.1%. The iron products group index decreased 0.4%.

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros a augmenté de 0.4%, passant de 482.9 en avril (indice rectifié) à 484.8 en mai. Il a augmenté de 6.7% en un an. Cinq des huit principaux groupes ont progressé, les trois autres ont baissé.

L'indice des produits d'origine animale a augmenté de 7.0%, passant de 499.4 en avril (indice rectifié) à 534.5 en mai. Cette augmentation est attribuable en grande partie à la hausse du prix du bétail (19.8%), des viandes fraîches (16.8%), des œufs (7.2%), de la volaille habillée (4.8%) et des viandes traitées (2.7%). L'indice du groupe des produits du bois est passé de 636.0 en avril (indice rectifié) à 657.5 en mai, ce qui représente une augmentation de 3.4%. Cette augmentation est attribuable à la hausse du prix de l'épinette (8.6%), du sapin (7.8%), du cèdre (7.7%), de la pruche (5.8%), du papier journal et du papier d'emballage (2.0%). L'indice du groupe des métaux non ferreux a augmenté de 0.9% en raison d'une hausse de 8.9% du prix de l'argent et de 1.2% du prix du nickel. En ce qui concerne le groupe des textiles, la progression a été de 0.8% en raison d'une hausse du prix de la laine brute (importée) (9.3%), de la laine brute (domestique) (5.2%) et du coton brut (3.3%). L'indice du groupe des métaux non métalliques a augmenté de 0.5%.

L'indice du groupe des produits d'origine végétale a diminué de 6.9%, passant de 472.5 en avril (indice rectifié) à 439.9 en mai. Cette diminution est attribuable à la baisse du prix du sucre et de ses dérivés (24.6%), des céréales (10.8%) et des fruits frais (10.1%). L'indice des produits du fer a diminué de 0.4%.

Security Price Indexes (1971 = 100)(1)

The investors index of common stocks rose 2.2% to 105.6 in May from 103.3 in April. Among the three major groups, industrials and finances registered gains of 3.5% to 108.9 and 1.4% to 120.0 respectively while utilities fell 2.1% to 85.0. The increase in industrials reflected substantial rises in petroleum, chemicals, industrial mines and printing and publishing. The six sub-groups within utilities all reported slight declines. A gain of 2.2% to 125.3 in banks accounted for the increase in the finance group.

During May the index of mining stocks remained practically unchanged, gaining only 0.1% to 118.7. Golds declined 0.5% to 220.4 while base metals gained 0.9% to 70.0.

The two supplementary indexes showed increases. Uraniums rose 6.5% to 165.6 and primary oil and gas gained 16.1% to 82.0.

The preferred stock index fell 1.3% from 86.0 in April to 84.9 in May.

Canadian Farm Products Price Index (1935-39 = 100)

The price index of Canadian farm products at terminal markets advanced 7.2% to 495.4 in May from 462.1 in April. The animal products index moved up 12.2% to 602.1 from 536.4 on price increases for lambs, steers, hogs and raw wool on both Eastern and Western markets, for eggs, cheesemilk and fluid milk in the East, and for butterfat in the West. Lower prices were shown for calves in the West.

An increase of 0.2% to 388.6 from 387.8 in the field products index, reflected higher prices for barley and wheat in the East, and for potatoes and hay in the West. Lower prices were shown for rye on both markets, for corn, oats and hay in the East, and for flax in the West.

Thirty Industrial Materials Price Index (1935-39 = 100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, eased down 0.2% to 483.7 in May from the revised April index of 484.8. Prices were lower for nine commodities, higher for nine and unchanged for twelve. Principal changes included decreases for raw sugar, domestic wheat, steel scrap, beef hides, cottonseed oil, oats, domestic lead, tin and linseed oil while increases were recorded for hogs, steers, raw cotton, raw wool, spruce lumber, iron ore, raw rubber, bleached sulphite pulp and crude oil.

(1) Revised indexes on the base 1971 = 100. See special supplement for details.

Indices des cours des valeurs mobilières (1971 = 100)(1)

L'indice des cours des actions ordinaires a augmenté de 2.2%, passant de 103.3 en avril à 105.6 en mai. Parmi les trois grands groupes, les valeurs industrielles et les finances ont augmenté respectivement de 3.5% (à 108.9) et 1.4% (à 120.0). Cependant, les services publics ont diminué de 2.1% pour s'établir à 85.0. La hausse des valeurs industrielles est en grande partie attribuable aux augmentations enregistrées dans le pétrole, les produits chimiques, les mines industrielles et l'impression et l'édition. Les six sous-groupes des services publics ont enregistré de légères diminutions. L'augmentation du groupe des finances est imputable à l'augmentation de 2.2% des banques (125.3).

En mai, l'indice des prix des titres miniers est demeuré presque inchangé, enregistrant une augmentation de 0.1% pour se fixer à 118.7. Les aurifères ont diminué de 0.5% pour s'établir à 220.4 tandis que les métaux primaires ont augmenté de 0.9% pour atteindre 70.0.

En ce qui concerne les deux indices de prix supplémentaires, on a observé une augmentation de 6.5% de l'uranium (à 165.6) et de 16.1% du pétrole et du gaz (à 82.0).

L'indice des actions privilégiées a diminué de 1.3%, passant de 86.0 en avril à 84.9 en mai.

Indice des prix des produits agricoles canadiens (1935-39 = 100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a augmenté de 14.5%, passant de 573.5 en avril à 656.7 en mai. L'indice des produits d'origine animale a augmenté de 12.2% pour passer de 536.4 à 602.1 en raison de l'augmentation du prix des agneaux, des bouvillons, des porcs et de la laine brute sur les marchés de l'Est et de l'Ouest, des œufs, du lait à fromage et du lait naturel dans l'Est, et du gras du beurre dans l'Ouest. On a enregistré une diminution du prix des veaux dans l'Ouest.

L'indice des produits de grande culture a augmenté de 0.2%, passant de 387.8 à 388.6 par suite de l'augmentation du prix de l'orge et du blé dans l'Est, des pommes de terre et du foin dans l'Ouest. On a enregistré des diminutions de prix pour le seigle sur les deux marchés, pour le maïs, l'avoine et le foin dans l'Est, et le lin dans l'Ouest.

Indice des trente matières industrielles (1935-39 = 100)

L'indice des prix des trente matières industrielles, calculé comme moyenne géométrique non pondérée, a diminué de 0.2% pour passer de 484.8 en avril (indice rectifié) à 483.7 en mai. On a enregistré des baisses de prix pour neuf marchandises, des augmentations pour neuf, tandis que les prix de douze autres n'ont pas changé. Les principales variations ont été les baisses observées pour le sucre brut, le blé canadien, les déchets d'acier, les peaux de bœuf, l'huile de coton, l'avoine, le plomb canadien, l'étain, et l'huile de lin, ainsi que les hausses de prix des porcs, des bouvillons, de la laine et du coton bruts, des sciages d'épinette, du minerai de fer, du caoutchouc brut, de la pâte de bois blanchie au sulphite et du pétrole brut.

(1) Indices révisés sur la base 1971 = 100. Voir le supplément spécial pour plus de renseignements.

Consumer Price Index

The Consumer Price Index for Canada (1961=100) advanced 0.8% to 181.3 in May from 179.8 in April. The latest rise, though somewhat greater than the increase in the preceding month, was less than half that registered between April and May in 1974. Nearly two-fifths of the monthly overall advance was attributable to higher food prices which rose by 1.1%. Housing accounted for another one-quarter. The index for All-Items excluding Food moved up by 0.8%, which is about the same rate of change experienced over the five months since the beginning of the year. Between May 1974 and May 1975, the total CPI advanced 10.1%.

Although the 1.1% rise in the Food index between April and May was the largest monthly increase since the beginning of the year, it was well below the 3.0% increase reported in the corresponding period in 1974. Seasonally higher prices for fresh produce, along with generally increased quotations for meat, provided the main impetus behind the latest monthly rise in the general food price level. Fresh fruits and fresh vegetables moved up in price by 7.5% and 5.7%, respectively. Beef prices, which had steadily decreased a total of 17.6% in the previous four months, advanced 1.4% in early May. Pork and poultry also retailed higher, moving up by 2.0% and 1.2%, respectively. In contrast, eggs declined in price by 4.6% and margarine retailed lower for the third consecutive month.

The advance of 0.8% in the index for All-Items other than Food was mainly due to increased shelter costs for both owned and rented accommodation, to price rises for cigarettes and other tobacco products, and to higher quotations for recreational equipment as well as widespread advances in movie admissions.

Viewed in terms of relative price change between goods and services, from April to May goods increased by 0.9% while services moved up 0.6%. Over the latest twelve-month period, both goods and services registered identical price rises of 10.1%.

On a seasonally adjusted basis, the April to May rise in the All-Items Consumer Price Index was 0.7%, comprising a 1.1% increase for Food and a 0.6% advance in the index for All-Items excluding Food. In May, the current annual rate of change in the CPI, based on the seasonally adjusted movement since three months earlier, was 7.1%, consistently remaining at about the same level since March.

L'indice des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961=100) a enregistré une augmentation de 0.8%, pour passer de 179.8 en avril à 181.3 en mai. Cette augmentation, quoique sensiblement supérieure à celle du mois précédent, représentait moins de la moitié de celle enregistrée entre avril et mai 1974. Pres des deux-cinquièmes de l'augmentation globale au cours de ce mois proviennent de la hausse du prix des aliments (1.1%). Le logement, pour sa part, en a représenté un quart. L'indice d'ensemble, sans les aliments, a augmenté de 0.8%, soit à peu près le même taux de variation que celui observé au cours des cinq premiers mois de l'année. Entre mai 1974 et mai 1975, l'indice d'ensemble des prix à la consommation a augmenté de 10.1%.

Même si l'augmentation de 1.1% enregistrée par l'indice des aliments entre avril et mai est la plus importante augmentation mensuelle depuis le début de l'année, elle se situe bien en deçà de l'augmentation de 3.0% survenue pendant la période correspondante en 1974. Une hausse saisonnière du prix des produits frais ainsi qu'une augmentation générale du prix de la viande sont à la base de cette dernière augmentation mensuelle au niveau du prix global des aliments. Les prix des fruits et des légumes frais ont monté de 7.5% et de 5.7% respectivement. Le prix du boeuf, qui avait baissé régulièrement au cours des quatre mois précédents (la baisse totale atteignant 17.6%), a monté de 1.4% au début de mai. Les prix de détail du porc et de la volaille ont aussi monté, soit de 2.0% et de 1.2% respectivement. Par contre, le prix des œufs a baissé de 4.6% et celui de la margarine avait baissé au détail, pour le troisième mois consécutif.

L'augmentation de 0.8% de l'indice d'ensemble, sans les aliments, est attribuable surtout aux coûts accrus du logement, aussi bien en ce qui concerne les frais de propriété que les loyers, à la hausse du prix des cigarettes et autres produits du tabac, ainsi qu'à celle du prix de l'équipement de sport et à l'augmentation générale des prix d'entrée dans les cinémas.

En ce qui concerne la variation relative des prix des biens par rapport aux services, entre avril et mai, les biens ont augmenté de 0.9% alors que les services ont enregistré une hausse de 0.6%. Au cours des douze derniers mois, les biens et les services ont enregistré une hausse de prix identique, soit de 10.1%.

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation a augmenté de 0.7% entre avril et mai, suite à une hausse de 1.1% pour les aliments et de 0.6% pour l'indice d'ensemble sans les aliments. En mai, le taux annuel courant de variation de l'I.P.C., basé sur le mouvement désaisonné des trois derniers mois, était de 7.1%, soit sensiblement au même niveau qu'en mars.

TABLE 2. Industry Selling Price Indexes by Industry and Selected Commodities

TABLEAU 2. Indice des prix de vente dans l'industrie par industrie et par certains produits

Industries and selected commodities(1)	1961 = 100												Annual Annuel	
	Month - Mois													
	J	F	M	A	M	J	J	A	S	O	N	D		
1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6	
1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4	
1973	133.1	134.6	136.6	138.2	139.5	141.0	143.0	147.9	147.7	149.0	150.4	152.9	142.7	
1974	157.4	160.1	162.7	165.7	168.5	169.9	173.1	175.9	178.0	179.7	182.6	182.7		
1975	185.6	187.0	187.1	188.9	190.7									

- (1) Indexes for 1974 and 1975 are subject to revision. — Les indices pour 1974 et 1975 sont sujets à révision.
- (2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. — La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui.
- (3) Effective January 1973 changes have been made in the calculation of this index. For details see page 92. — A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 92. — A
- (4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. — Une révision approfondie de l'échantillon des pondérations et des prix y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old series	New series
	Ancienne série	Nouvelle série
December - 1970 - Décembre	95.3	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. — Les chiffres de cette série ont été révisée à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (6) Motor gasoline prices are 'list' and may not be a reflection of actual transaction prices. — Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (7) Gross weighted, including inter-industry shipments. For explanation see page 91. — Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 91.

(1) All indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.

(2) Includes gold. - Y compris l'or.

(3) Consists fo iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or.

(4) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros.

(5) Excludes gold. - Sauf l'or.

(6) See page 94 for additional information. - Pour des informations additionnelles voir page 94.

(7) Final to July 1974. See page 93 for details on Western grain prices and specific publications wherein final indexes or earlier years may be found. - Indices définitifs jusqu'en juillet 1974. Pour des données détaillées sur le prix des céréales de l'Ouest, voir page 93 ainsi que les publications spéciales qui contiennent les derniers indices ou ceux des années précédentes.

TABLE 6. Wholesale Price Indexes of Selected Primary Commodities⁽¹⁾

TABLEAU 6. Indices des prix de gros de certaines produits bruts⁽¹⁾

1935-39=100

Primary commodities Produits bruts	Months - Mois				Annual averages Moyenne annuelle		
	May 1975 Mai	Apr. 1975 Avr.	May 1974 Mai	Apr. 1974 Avr.	1974	1973	1972
Coffee, green - Café vert	466.5	463.6	513.6	511.7	492.6	468.0	358.1
Copper, electrolytic - Cuivre électrolytique ...	590.9	590.9	722.5	722.5	730.3	594.4	474.3
Cotton, raw - Coton brut	412.9	399.9	524.6	565.0	526.8	389.7	330.0
Eggs - Oeufs	200.7	187.2	214.1	225.4	217.7	196.1	136.2
Fruits, fresh - Fruits frais	281.5	313.1	310.5	291.0	284.3	263.9	223.5
Grains - Céréales	463.8	520.0	540.2	575.1	562.9	406.1	205.7
Hides and skins - Cuirs et peaux vertes	178.9	192.2	233.6	262.3	220.2	323.9	294.1
Lead, electrolytic - Plomb électrolytique	469.5	471.6	527.2	512.6	500.2	367.0	323.4
Livestock - Bétail	644.1	537.8	567.2	565.4	611.1	606.7	458.7
Onions - Oignons	586.0	433.4	291.2	312.2	328.7	476.7	259.8
Potatoes - Pommes de terre	246.9	222.8	843.4	807.3	626.7	485.9	219.1
Rubber, raw - Caoutchouc brut	187.0	185.1	268.0	269.2	246.8	222.7	114.0
Scrap iron and steel - Déchets de fer et d'acier	545.8	578.7	805.8	817.4	740.6	388.8	268.1
Silver - Argent	1159.9	1065.4	1426.3	1131.2	1180.8	663.3	430.6
Steers - Bouvillons	780.5	635.1	757.3	742.4	803.9	645.3	597.6
Sugar, raw - Sucre brut	601.9	843.0	790.6	731.3	943.5	321.0	253.9
Tin - Etain	697.7	707.5	882.5	843.1	764.4	435.6	338.8
Wool, raw domestic - Laine brute indigène	251.5	239.0	333.8	375.4	334.3	492.5	201.7
Wool, raw, imported - Laine brute importée	259.0	137.0	301.1	318.7	284.8	179.9	139.8
Zinc, prime, western - Zinc de première qualité de l'Ouest	833.8	821.8	750.1	758.4	767.3	573.4	511.6

(1) All indexes for 1973, 1974 and 1975 are subject to revision. - Les indices pour 1973, 1974 et 1975 sont sujets à révision.

TABLE 7. Wholesale Prices of Selected Commodities
(All prices given in Canadian funds)

TABLÉAU 7. Prix de gros de certains produits
(en dollars canadiens)

Commodity - Produit	Months - Mois				Annual averages - Moyenne annuelle		
	May 1975 Mai	Apr. 1975 Avr.	May 1974 Mai	Apr. 1974 Avr.	1974	1973	1972
					dollars		
<u>Vegetable products - Substances végétales:</u>							
Barley, No. 1 feed, bu. - Orge, no 1 (fourragère), le boisseau	2.43	2.46	2.67	2.70	2.75	1.95	1.13
Oats, No. 2 C.W., bu. - Avoine, no 2 O.C., le boisseau	1.74	1.77	1.85	1.84	1.89	1.38	.76
Potatoes, No. 1 Saint John, 75-lb. bag - Pommes de terre, no 1, Saint-Jean, le sac de 75 livres	2.44	1.99	9.90	9.41	7.08	5.73	2.68
Sugar, granulated, std., Montreal, 100-lb. bag - Sucre granulé, ordinaire, Montréal, le sac de 100 livres	26.60	35.20r	32.35	29.05r	39.78	13.73	13.24
Wheat, No. 1 C.W. Red Spring 13.5% Protein, bu. - Blé 1. C.O. Rouge de printemps 13.5 % protéine	4.49	5.18	5.36	5.79	5.58	3.99	..
<u>Animal products - Produits animaux:</u>							
Butter, prints, 1st grade, Montreal, lb. - Beurre en mottes, 1re qualité, à Montréal, la livre	1.07	1.07	.81	.81	.83	.74	.71
Eggs, grade "A", large, Toronto, doz. - Oeufs, Qualité "A", gros, à Toronto, la douzaine ..	.67	.59	.72	.78	.75	.70	.45
Hides, packer, light native steers, lb. - Peaux à l'abattoir, bouvillons légers indigènes, la livre24	.24	.30	.31	.27	.36	.33
Hogs, Toronto (bonus excluded) 100-lb. - Porcs, Toronto (prime exclue), les 100 livres	63.63	52.96	40.35	42.74	50.59	54.85	37.44
Steers, Aver. 1,263, Toronto, 100-lb. - Bouvillons, Moy. 1,263, Toronto, les 100 livres	49.00	41.25	46.88	46.75	50.36	36.79	..
<u>Textile products - Produits textiles:</u>							
Wool, raw, Australian, 64's, clean, lb. - Laine brute d'Australie, 64, propre, la livre	1.69	1.59	1.89	2.09	1.82	2.45	1.21
Wool, raw, Eastern, domestic, lb. - Laine brute de l'Est, indigène, la livre54	.52	.63	.70	.63	.81	.39
<u>Wood products - Produits du bois:</u>							
Shingles, asphalt, 12" x 36", 100 sq. ft. - Bardeaux d'asphalte, 12" x 36", les 100 pieds carres	10.85	10.85	10.42	10.26	10.68;	8.61	7.78
<u>Non-ferrous metals products - Produits des métaux non ferreux:</u>							
Copper, electrolytic, domestic, 100-lb. - Cuivre électrolytique, indigène, 100 livres	63.38	63.38	77.50	77.50	78.33	63.75	50.88
Zinc, high grade, electrolytic, 100-lb. - Zinc, Qualité supérieure, électrolytique, 100 livres	37.50	37.50	34.50	34.50r	35.00	24.02	19.10
<u>Chemical products - Produits chimiques:</u>							
Sodium carbonate, (soda ash) 58%, 100-lb. - Carbonate de soude (cendre de soude) 58 %, les 100 livres	4.80	4.80	3.50	3.50	3.85	2.94	2.65
Sulphuric acid, 66 Baume, 2000-lb. ton - Acide sulfurique, 66 Baume, la tonne (2,000 livres)	34.00	34.00	32.00	32.00	31.92	31.00	31.00

All-items Consumer Price Index converted to 1949=100, May 1975 - L'indice des prix à la consommation de tous les éléments converti à 1949=100, mai 1975 234.2

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 95. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.

Shortening - Graisse végétale	214.3	214.9	182.5	177.2	183.5	129.2	121.8
Salad/cooking oil(2) - Huile à frire ou de table(2)	179.7	182.1	147.9	136.4	149.1
Salad dressing - Vinaigrette	189.4	188.7	144.4	134.8	147.3	114.2	109.9
Meat, poultry and fish - Viande, volaille et poisson	188.4	186.3	194.8	192.5	198.9	182.6	147.7
Meat - Viande	180.5	178.2	189.2	186.0	194.2	181.3	147.5
Beef - Boeuf	174.7	172.3	209.6	201.7	210.0	190.4	157.6
Sirloin steak - Bifteck de surlonge	185.0	181.8	193.4	181.5	203.5	176.1	152.4
Round steak - Bifteck dans la ronde	192.8	187.9	214.7	203.2	219.0	195.2	160.4
Prime rib roast - Rôti de côtes de choix	194.0	193.4	197.8	183.2	205.4	181.6	154.3
Blade roast - Rôti de palette	158.1	155.4	195.2	187.2	197.4	182.0	148.9
Stewing beef - Boeuf pour ragout	186.7	182.6	210.1	203.2	210.2	186.3	157.3
Hamburg - Boeuf hache	150.5	149.3	241.8	243.0	225.0	217.8	170.4
Liver - Foie	161.2	170.9	193.2	191.3	193.1	168.6	134.8
Pork - Porc	190.9	187.1	155.8	158.8	171.0	168.4	132.4
Bacon(3) - Bacon(3)	181.3	182.0	135.6	136.6	159.5	153.2	115.8
Smoked ham - Jambon fumé	180.6	179.0	149.9	154.5	162.0	158.8	125.7
Cottage Roll - Roule de haut d'épaule	201.9	203.8	169.9	170.6	180.7	176.9	135.0
Loin cuts - Coupes de longe	212.3	199.2	169.9	173.7	186.2	187.5	153.0
Shoulder cuts - Coupes d'épaule	163.5	167.4	144.5	147.4	158.1	173.8	128.0
Sausages - Saucisses	191.4	190.5	181.5	183.7	181.8	166.4	130.9
Other meat - Autres viandes	179.4	180.4	191.2	191.0	190.6	178.8	146.6
Wiener - Saucisses de Francfort	159.9	160.7	168.8	168.7	168.2	160.1	127.8
Veal - Veau	221.6	222.9	245.6	243.4	245.5	225.5	189.9
Canned meat - Viandes en conserve	182.5	182.9	186.5	190.2	184.4	151.5	123.3
Poultry - Volaille	191.2	188.9	186.5	189.6	186.4	164.3	124.6
Chicken - Poulet	200.7	198.1	192.6	194.6	191.4	169.1	128.9
Turkey - Dinde	153.5	152.2	157.7	163.5	160.3	140.4	105.4
Fish - Poisson	278.6	279.5	276.3	274.4	275.9	222.3	180.5
Canned salmon - Saumon en boîte	241.0	241.2	240.9	240.4	241.0	181.3	149.0
Canned tuna(2) - Thon en boîte(2)	121.4	121.5	115.8	115.5	118.5
Eggs - Oeufs	135.4	142.0	153.1	155.2	151.2	136.5	94.7
Fruit and vegetables - Fruits et légumes	205.8	197.2	201.1	182.4	189.5	166.7	139.8
Fresh fruit - Fruits frais	220.0	204.6	205.6	183.7	198.6	175.6	143.2
Oranges - Oranges	127.1	121.8	125.1	117.6	127.9	119.8	104.4
Bananas - Bananes	140.9	134.5	98.4	70.0	97.6	82.8	79.3
Apples - Pommes	180.5	172.4	198.4	190.2	199.7	160.0	123.8
Grapefruit - Pamplemousses	186.7	178.7	156.3	138.3	163.4	158.7	153.4
Processed fruit - Fruits traités	186.9	186.5	166.7	164.5	169.3	142.4	127.6
Canned peaches - Pêches en conserve	213.4	212.6	175.6	171.8	181.9	155.9	140.8
Canned pears - Poires en conserve	178.9	177.6	144.1	143.3	149.4	132.7	124.5
Canned apple sauce(2) - Compote de pommes en conserve(2)	162.2	161.9	140.0	138.4	142.7
Canned apple juice(3) - Jus de pommes en conserve(3)	184.4	185.2	186.7	185.0	184.1	138.3	122.0
Canned orange juice - Jus d'oranges en conserve	128.2	127.8	116.5	115.0	117.5	112.6	115.0
Raisins - Raisins secs	273.0	272.8	260.8	257.4	262.8	207.2	153.4
Fresh vegetables - Legumes frais	195.7	185.1	227.7	195.2	196.0	180.6	147.0
Potatoes - Pommes de terre	146.2	138.5	336.4	286.0	248.3	212.3	128.2
Tomatoes - Tomates	216.5	227.4	248.2	190.8	207.8	173.7	167.5
Lettuce - Laitue	211.8	187.0	185.3	160.7	188.8	189.6	162.9
Carrots - Carottes	229.0	204.6	124.2	122.0	142.1	126.6	124.9
Celery - Céleri	180.6	163.3	156.0	151.3	166.4	167.4	164.2
Onions - Oignons	291.5	179.7	177.4	179.7	190.9	221.6	157.9
Cabbage - Choux	225.1	228.4	204.0	196.2	190.1	199.1	171.9
Turnips - Navets	210.3	184.1	157.9	156.2	167.2	182.0	154.2

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subsequentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au tableau 14.

32	Jan. - Janv.	184.6	147.0	151.0	124.7	158.1
33	Feb. - Fév.	186.1	153.4	151.0	124.8	158.3
34	Mar. - Mars	186.0	156.1	152.3	124.8	158.5
35	Apr. - Avril	185.8	156.1	152.3	126.2	160.3
36	May - Mai	188.4	162.1	157.4	129.4	164.1
37	June - Juin					172.2

- (1) Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 expenditure weights for Québec and Thunder Bay); those for May 1973 forward are based on 1967 expenditures. The revised series are linked to their predecessors at April 1973. For further explanation see page 95.
- (2) As of January 1975, the separate consumer price indexes for Saskatoon, Regina, Edmonton and Calgary supersede the combined-cities series. Users of the combined series are therefore advised to switch to the separate city indexes which are available only from April 1973. (The historical data for the combined-cities series are presented in Table 11A). Should users have any questions, contact the Retail Prices Section or consult the Retail Prices and Living Costs Service Bulletin, Catalogue 62-005, Volume 3, No. 5.
- (3) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.
- (4) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.

								37

(1) Avant mai 1973, les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957 (pour Québec et Thunder Bay sur les dépenses de 1964); à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.

(2) A partir de janvier 1975, les indices séparés des prix à la consommation pour Saskatoon, Regina, Edmonton et Calgary remplacent les séries combinées. Nous conseillons donc aux utilisateurs des séries combinées d'utiliser les séries des indices séparés qui sont disponibles depuis avril 1973. (Les données historiques pour les séries combinées sont publiées au tableau 11A). Si il y a des questions, communiquez avec la section des prix de détail ou consultez le Bulletin de service sur les prix de détail et les coûts de la vie, no 62-005 au catalogue, volume 3, no 5.

(3) Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était base uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.

(4) Comprend le logement et l'entretien du ménage. Jusqu'en avril 1963, l'élément logement des indices de l'habitation des agglomérations urbaines était base uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR PRICE SERIES

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills;" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES SÉRIES DE PRIX

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", (n° 62-528 au catalogue).

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie;" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

**Purchase Price Indexes of Secondary Metals
(1969 = 100)**

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

**Canadian Farm Products Price Index
(1935-39 = 100)**

Prices for Western grains used in the index are Canadian Wheat Board buying prices for grain in store at Vancouver or Thunder Bay.

Final payments for the crop year August 1973 - July 1974 were announced on December 24, 1974 and have been incorporated into the index. Estimates for the total 1974-75 payments are based on the initial payment plus half of the 1973-74 crop year final payment.

**Indices du prix d'achat des métaux de deuxième fusion
(1969 = 100)**

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

**Indice des prix des produits agricoles canadiens
(1935-39 = 100)**

Les prix des céréales de l'Ouest utilisés dans l'indice sont les prix d'achat de la Commission canadienne du blé pour les céréales entreposées à Vancouver ou à Thunder Bay.

Les paiements finals pour la campagne agricole août 1973 - juillet 1974 ont été annoncés le 24 décembre 1974 et ont été incorporés à l'indice. Les estimations des paiements totaux de 1974-75 sont basées sur le paiement initial plus la moitié du paiement final de la campagne agricole 1973-74.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

30

$$\sqrt[p]{\frac{P_1}{tN} \times \frac{P_2}{tN} \times \frac{P_3}{tN} \times \dots \times \frac{P_{30}}{tN}}$$

30

$$\sqrt{\frac{P_1}{t \ 35-39} \times \frac{P_2}{t \ 35-39} \times \frac{P_3}{t \ 35-39} \times \dots \times \frac{P_{30}}{t \ 35-39}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter *Wholesale Price Indexes 1913-50 (Reference Paper No. 24)* et *Prices and Price Indexes 1949-52 (Vol. 23)* (n° 62-501 au catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

30

$$\sqrt{\frac{P_1}{tN} \times \frac{P_2}{tN} \times \frac{P_3}{tN} \times \dots \times \frac{P_{30}}{tN}}$$

30

$$\sqrt{\frac{P_1}{t \ 35-39} \times \frac{P_2}{t \ 35-39} \times \frac{P_3}{t \ 35-39} \times \dots \times \frac{P_{30}}{t \ 35-39}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

The Consumer Price Index for Canada (1961 = 100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961 = 100 from 1949 = 100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949 = 100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961 = 100) (Revision based on 1967 Expenditures)*, Catalogue 62-539.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

L'indice des prix à la consommation pour le Canada (1961 = 100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949 = 100 à 1961 = 100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (n° 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949 = 100) (Revision based on 1957 Expenditure)*, (n° 62-518 au catalogue). En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961 = 100) (Révision fondée sur les dépenses de 1967)*, (n° 62-539 au catalogue).

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961 - avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, n° 62-005 au catalogue, vol. 2 n° 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appeler à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0 / 144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être acheté avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ($\$1.00 \times 100.0 / 144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de

other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is \$90.91 ($(100.0/110.0) \times \100), which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 ($(90.91/80.00) \times 100$). Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages ($(\$100.00-\$80.00/\$80.00) \times 100$).

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 ($(146.23/74.45) \times 100$). The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 ($(146.23/142.0) \times 100$). (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 ($(102.98/74.45) \times 100$).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be ren-

la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 ($(100.0/110.0) \times 100$), et que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 ($(90.91/80.00) \times 100$). On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires ($(\$100.00-\$80.00/\$80.00) \times 100$).

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 ($(146.23/74.45) \times 100$). Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 ($(146.23/142.0) \times 100$). (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 ($(102.98/74.45) \times 100$).

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consom-

dered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Measurements of retail price differentials prevailing between a number of Canadian urban centres previously published to reflect inter-city comparisons as of May 1965, May 1968, May 1969 and May 1971 have been revised to February 1975.

In this new series of updatings inter-city price comparisons will be drawn for goods and services comprising most of the budget on which the Consumer Price Index for Canada is currently based.

Table 14 presents the first five components of goods and services to be updated in this series. Price indexes for additional budget elements will be published on a component-by-component basis as each stage of these results becomes available. The data base for this study was the wide range of retail price quotations collected in the course of production of the national Consumer Price Index in addition to supplementary information gathered in a special program of pricing undertaken for publication of City Average Retail Prices(1).

(1) Retail Prices and Living Costs Service Bulletin, Vol. 4, No. 2, February, 1975.

mation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division de travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

Les mesures de la disparité des prix de détail qu'on observe dans un certain nombre de centres urbains du Canada, déjà publiées afin de donner les comparaisons entre les villes aux mois de mai 1965, mai 1968, mai 1969 et mai 1971 ont été révisées en février 1975.

Les nouvelles séries de mises à jour seront faites pour la plupart des biens et services servant actuellement à établir l'indice des prix à la consommation du Canada.

On trouvera au tableau 14, les résultats de la mise à jour des cinq premières composantes. Pour ce qui est des autres éléments du budget à la consommation, on publiera des indices de prix différentiels, composante par composante, au fur et à mesure que les résultats d'enquête seront disponibles. Les données de base pour cette étude ont été constituées par l'importante collection recueillie pour la production de l'indice national des prix à la consommation en plus de l'information supplémentaire obtenue dans le cadre d'un programme spécial de relevé des prix, dont les résultats permettent de publier les prix de détail moyens par ville(1).

(1) Bulletin de Service: Prix de détail et Coût de la Vie, Vol. 4, No. 2, février 1975.

As previously, to facilitate price comparability between locations, differential price measurements are derived between separate pairs of cities in geographic proximity to each other. Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names wherever possible, and also having regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, paired city indexes are initially related to a common base city and subsequently compared with a weighted average of the combined 11 cities equalling 100. This is a departure from previous such studies which were based on Winnipeg price levels equalling 100. Item price relationships are aggregated by application of the 1967 combined cities weighting diagram updated for price change to February 1975.

Further information regarding Table 14 can be obtained from: Comparative Living Costs Section, Prices Division, Statistics Canada.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources in contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Comme par le passé, afin de faciliter la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour des paires de villes géographiquement proches. A l'intérieur de chaque paire de villes, les prix ont été assortis au niveau de l'article, c'est-à-dire en s'assurant que les spécifications étaient semblables, y compris la marque lorsque cela était possible, et aussi en tenant compte de la similitude des points de vente au détail et des méthodes de vente. En utilisant la méthode de couplage, les indices couplés des villes ont d'abord été reliés à une ville de base commune, puis comparés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Ceci constitue une différence entre cette étude et les études précédentes qui posaient le niveau des prix de Winnipeg comme étant égal à 100. Les relations de prix des articles ont été regroupées en appliquant le schéma de la pondération de 1967 des villes combinées mis à jour en fonction des variations de prix observées en février 1975.

De plus amples renseignements concernant le tableau 14 peuvent être obtenus de: la Section des coûts comparatifs de la vie, Division des Prix, Statistique Canada.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (n° 62-004 au catalogue) et dans le bulletin annuel *Prices and Price Indexes* (n° 62-002 au catalogue).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des années de 1935-39 par un équivalent à jour et on a cessé de la publier.

Security Price Indexes

Revised security price indexes on the base 1971 = 100 were presented for the first time in the May 1975 issue of this publication. The revision constitutes changes in the composition and method of calculation of the indexes as well as a shift in the price reference base from 1961 to 1971.

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held for investment purposes. The portfolio represents stocks of Canadian companies listed on at least one Canadian exchange. The number of shares held for each issue is in proportion to the total number of shares outstanding as of January 1 of each year.

The indexes are calculated using the Laspeyres index formula. Prices for the weekly common stock indexes are the daily closing quotations from the exchange with the highest volume for each stock, averaged over the number of trading days in the particular week. For preferred stock, prices used are the monthly weighted averages of daily closing quotations in which the weights are the daily total sales. Index weighting at the group and sub-group level are based on the average yearly volume of shares traded over the period 1971 to 1974.

The stocks included in the indexes are classified according to the Standard Industrial Classification (revised 1970). Two new sub-groups have been established as part of the Investors Index: Radio and Television Broadcasting has been added to Utilities while Insurance has been added to the Finance group. The order of the sub-groups has been slightly rearranged and two sub-groups (Alcoholic Beverages and Trade) have undergone minor name changes.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Indices des cours des valeurs mobilières

Les indices révisés des cours des valeurs mobilières sur la base 1971 = 100 ont été présentés pour la première fois dans le numéro de mai 1975 de cette publication. Cette révision comporte des changements à la composition et à la méthode de calcul des indices. Par ailleurs, la base de référence des prix 1961 a été changée en celle de 1971.

Les indices des cours des valeurs mobilières mesurent dans le temps les effets du mouvement des prix sur les valeurs d'un portefeuille d'actions achetées et détenues aux fins de placement. Ce portefeuille comprend des actions de sociétés canadiennes cotées à au moins une bourse du Canada. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation au 1er janvier de chaque année.

Les indices sont calculés d'après la formule de Laspeyres. Les prix servant au calcul des indices hebdomadaires sont les cours quotidiens de clôture pour la bourse où le volume des transactions est le plus élevé pour chaque titre. Ils sont ensuite mis en moyenne selon le nombre de jours ouvrables d'une semaine déterminée. En ce qui concerne les actions privilégiées, les prix utilisés sont les moyennes mensuelles pondérées des cours quotidiens de clôture dans lesquels les pondérations sont les ventes totales quotidiennes. Les pondérations des groupes principaux et des sous-groupes sont basées sur le volume annuel moyen de titres vendus au cours de la période 1971-1974.

Les actions faisant partie des indices sont classés selon la Classification des activités économiques de 1970. Deux nouveaux sous-groupes ont été créés en tant que partie de l'indice des cours des actions ordinaires: la radiodiffusion et la télédiffusion ont été ajoutées aux services tandis que les assurances ont été ajoutées au groupe des finances. Par ailleurs, l'ordre des sous-groupes a été modifié et le nom de deux d'entre eux (boissons alcooliques et commerce) a été changé.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

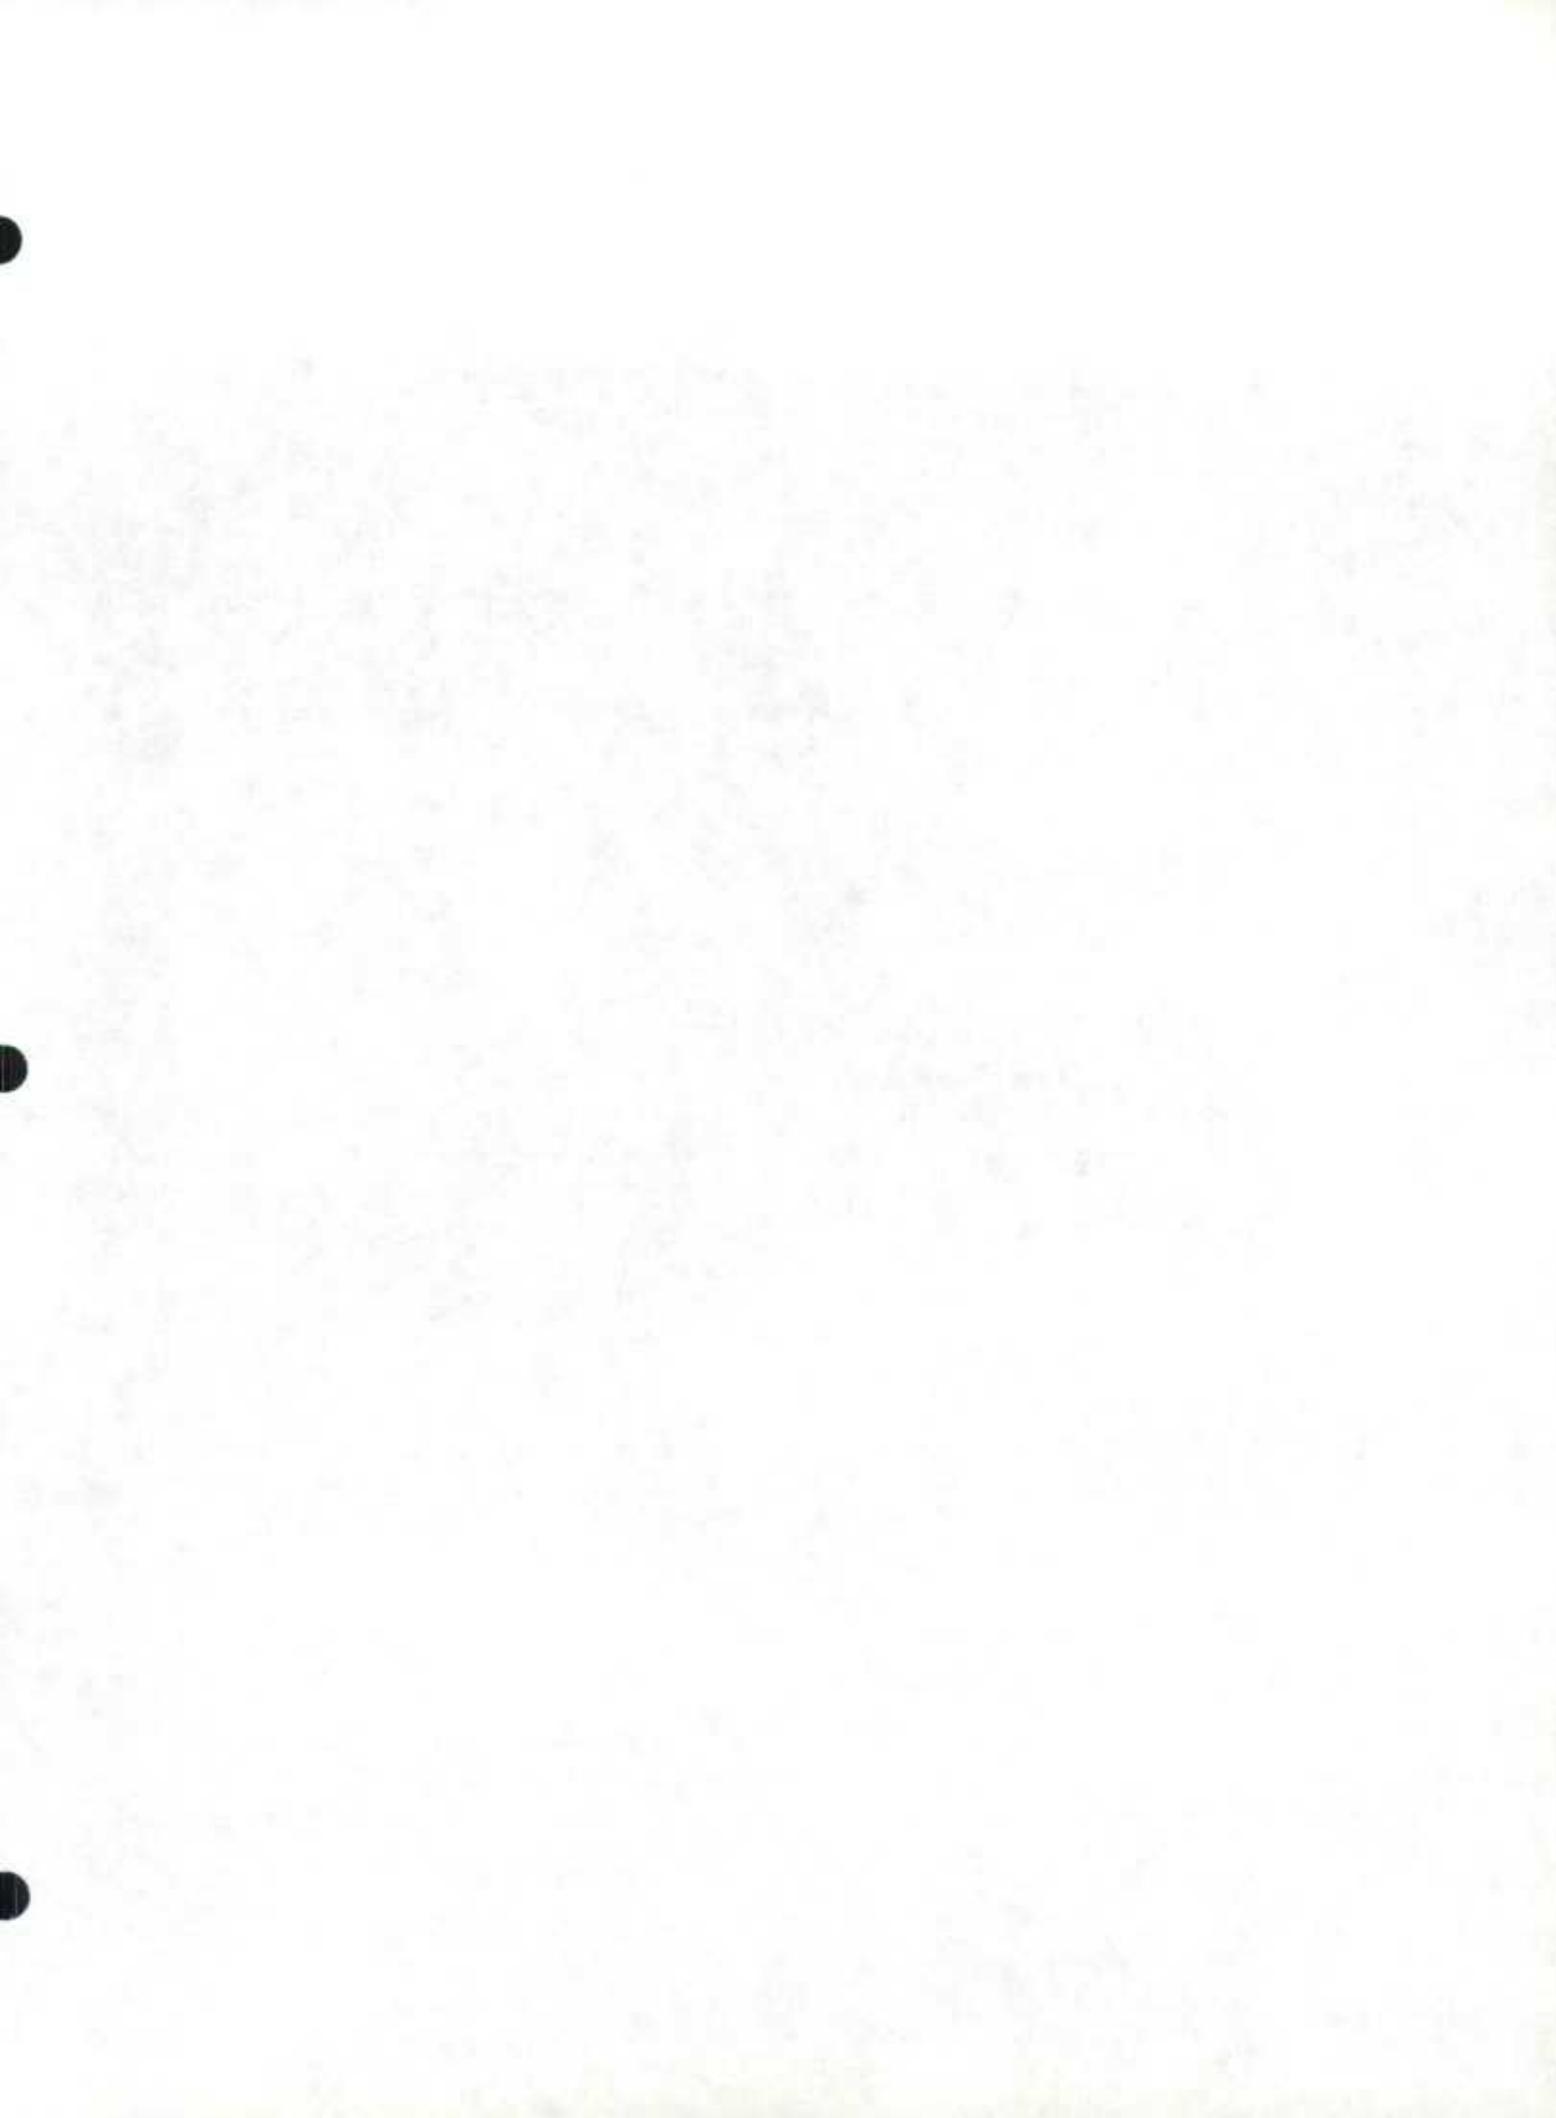

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

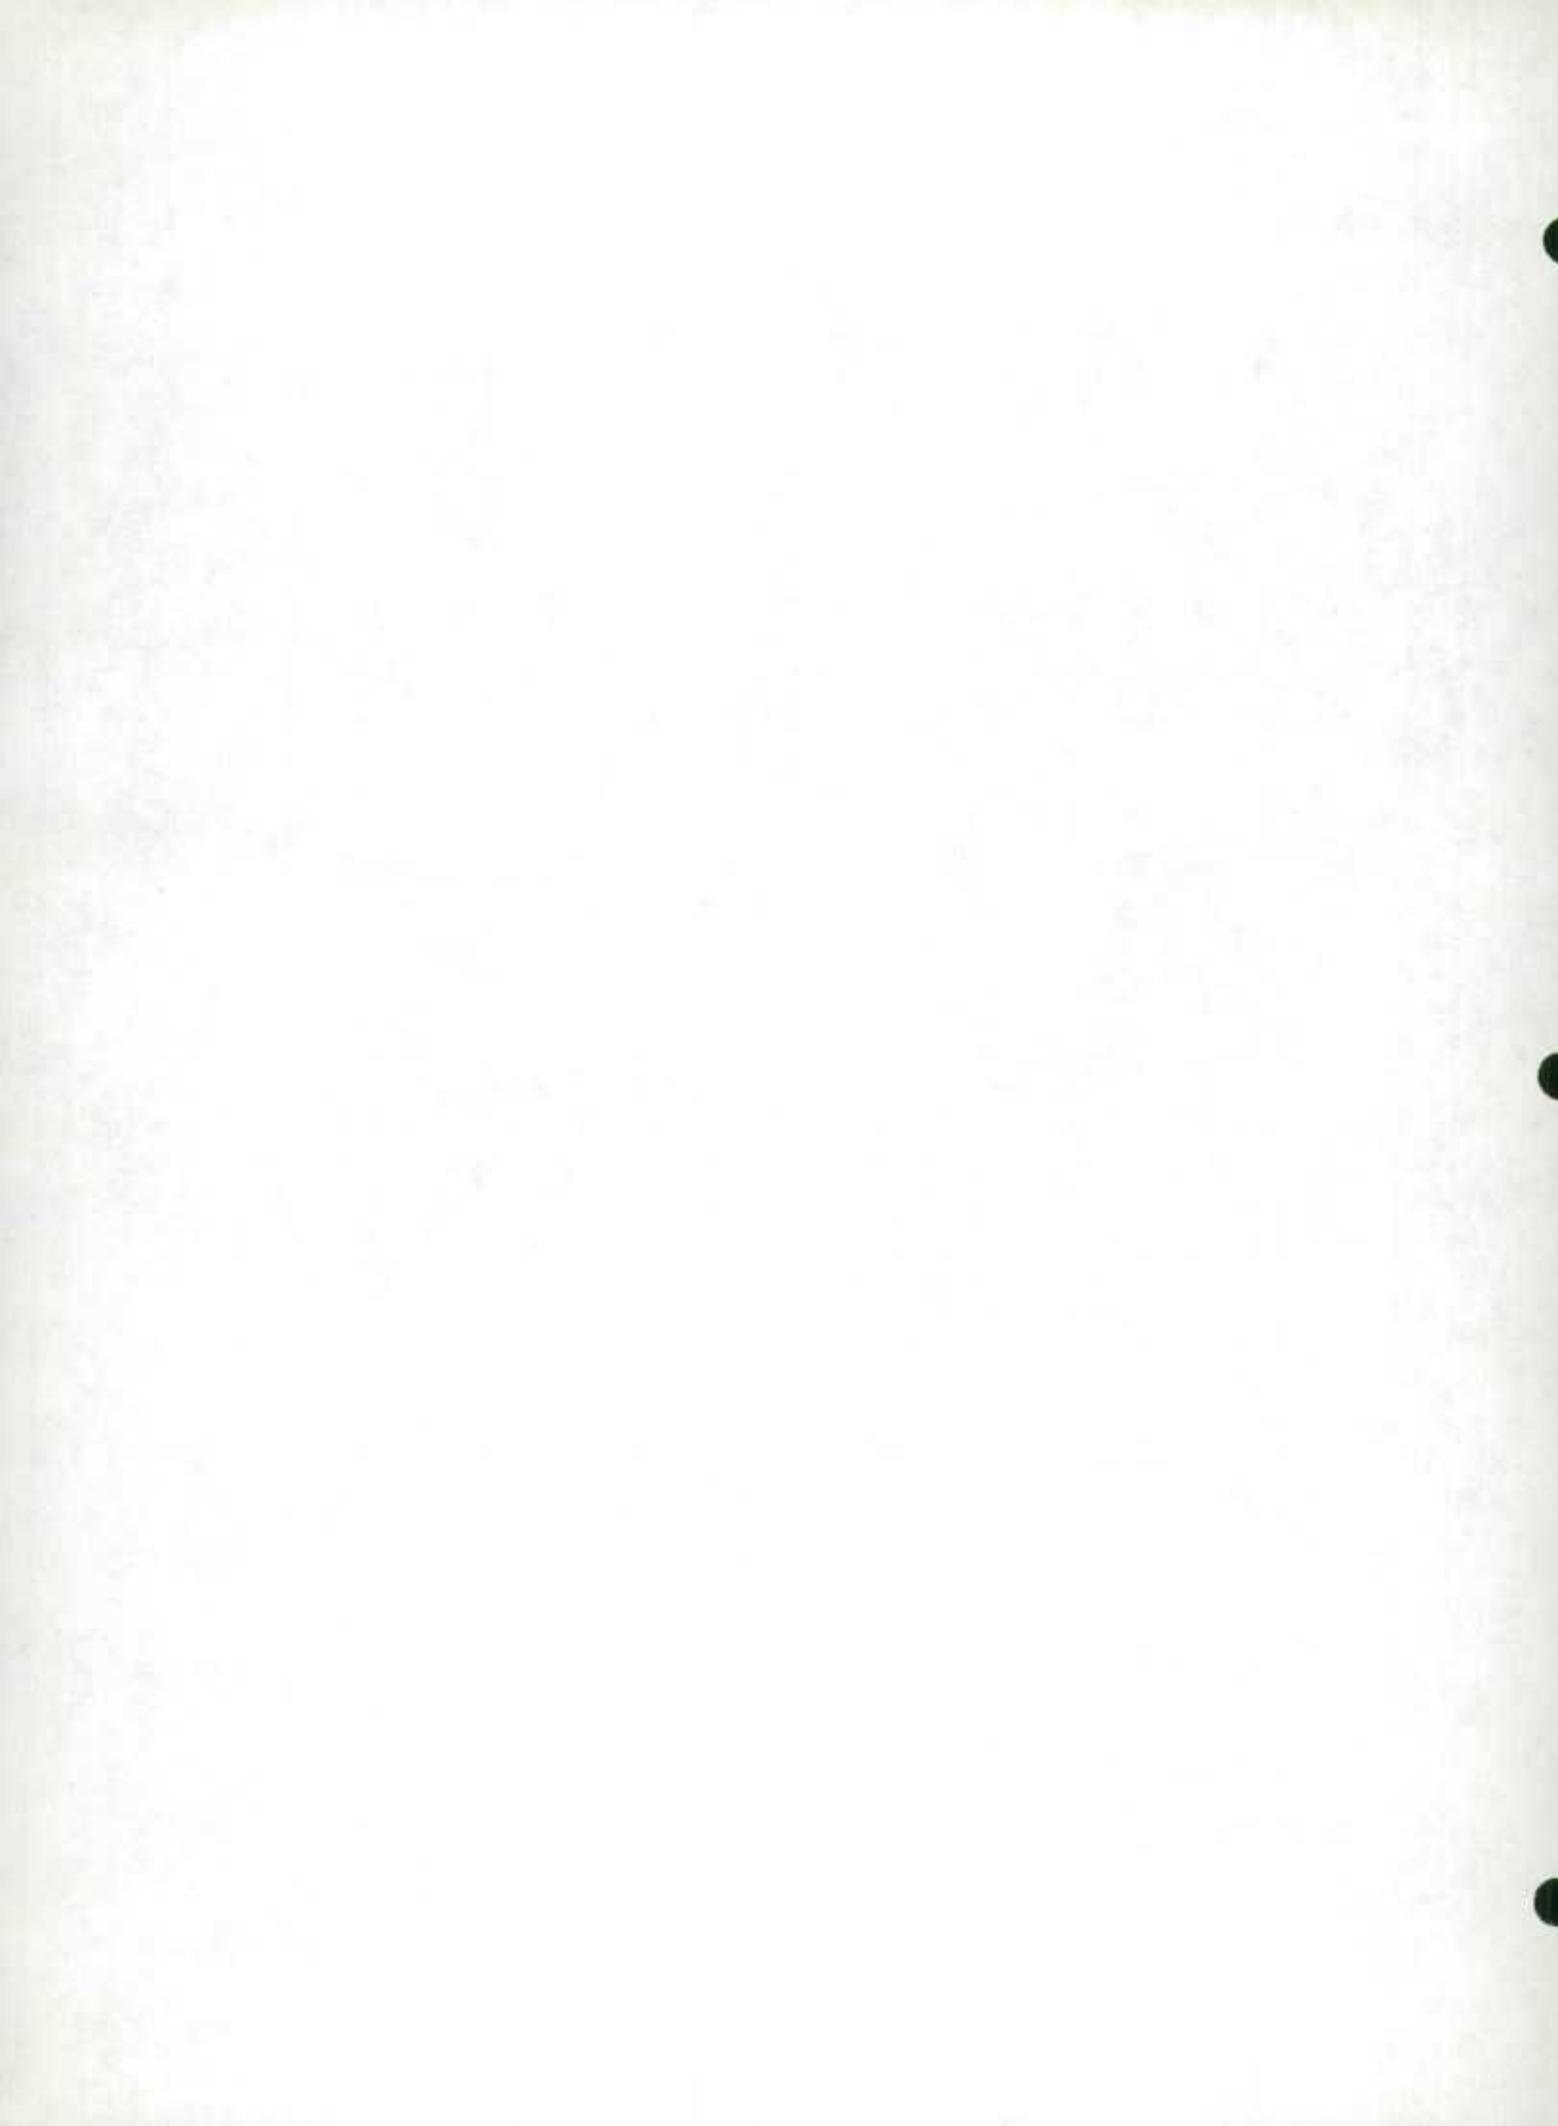

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

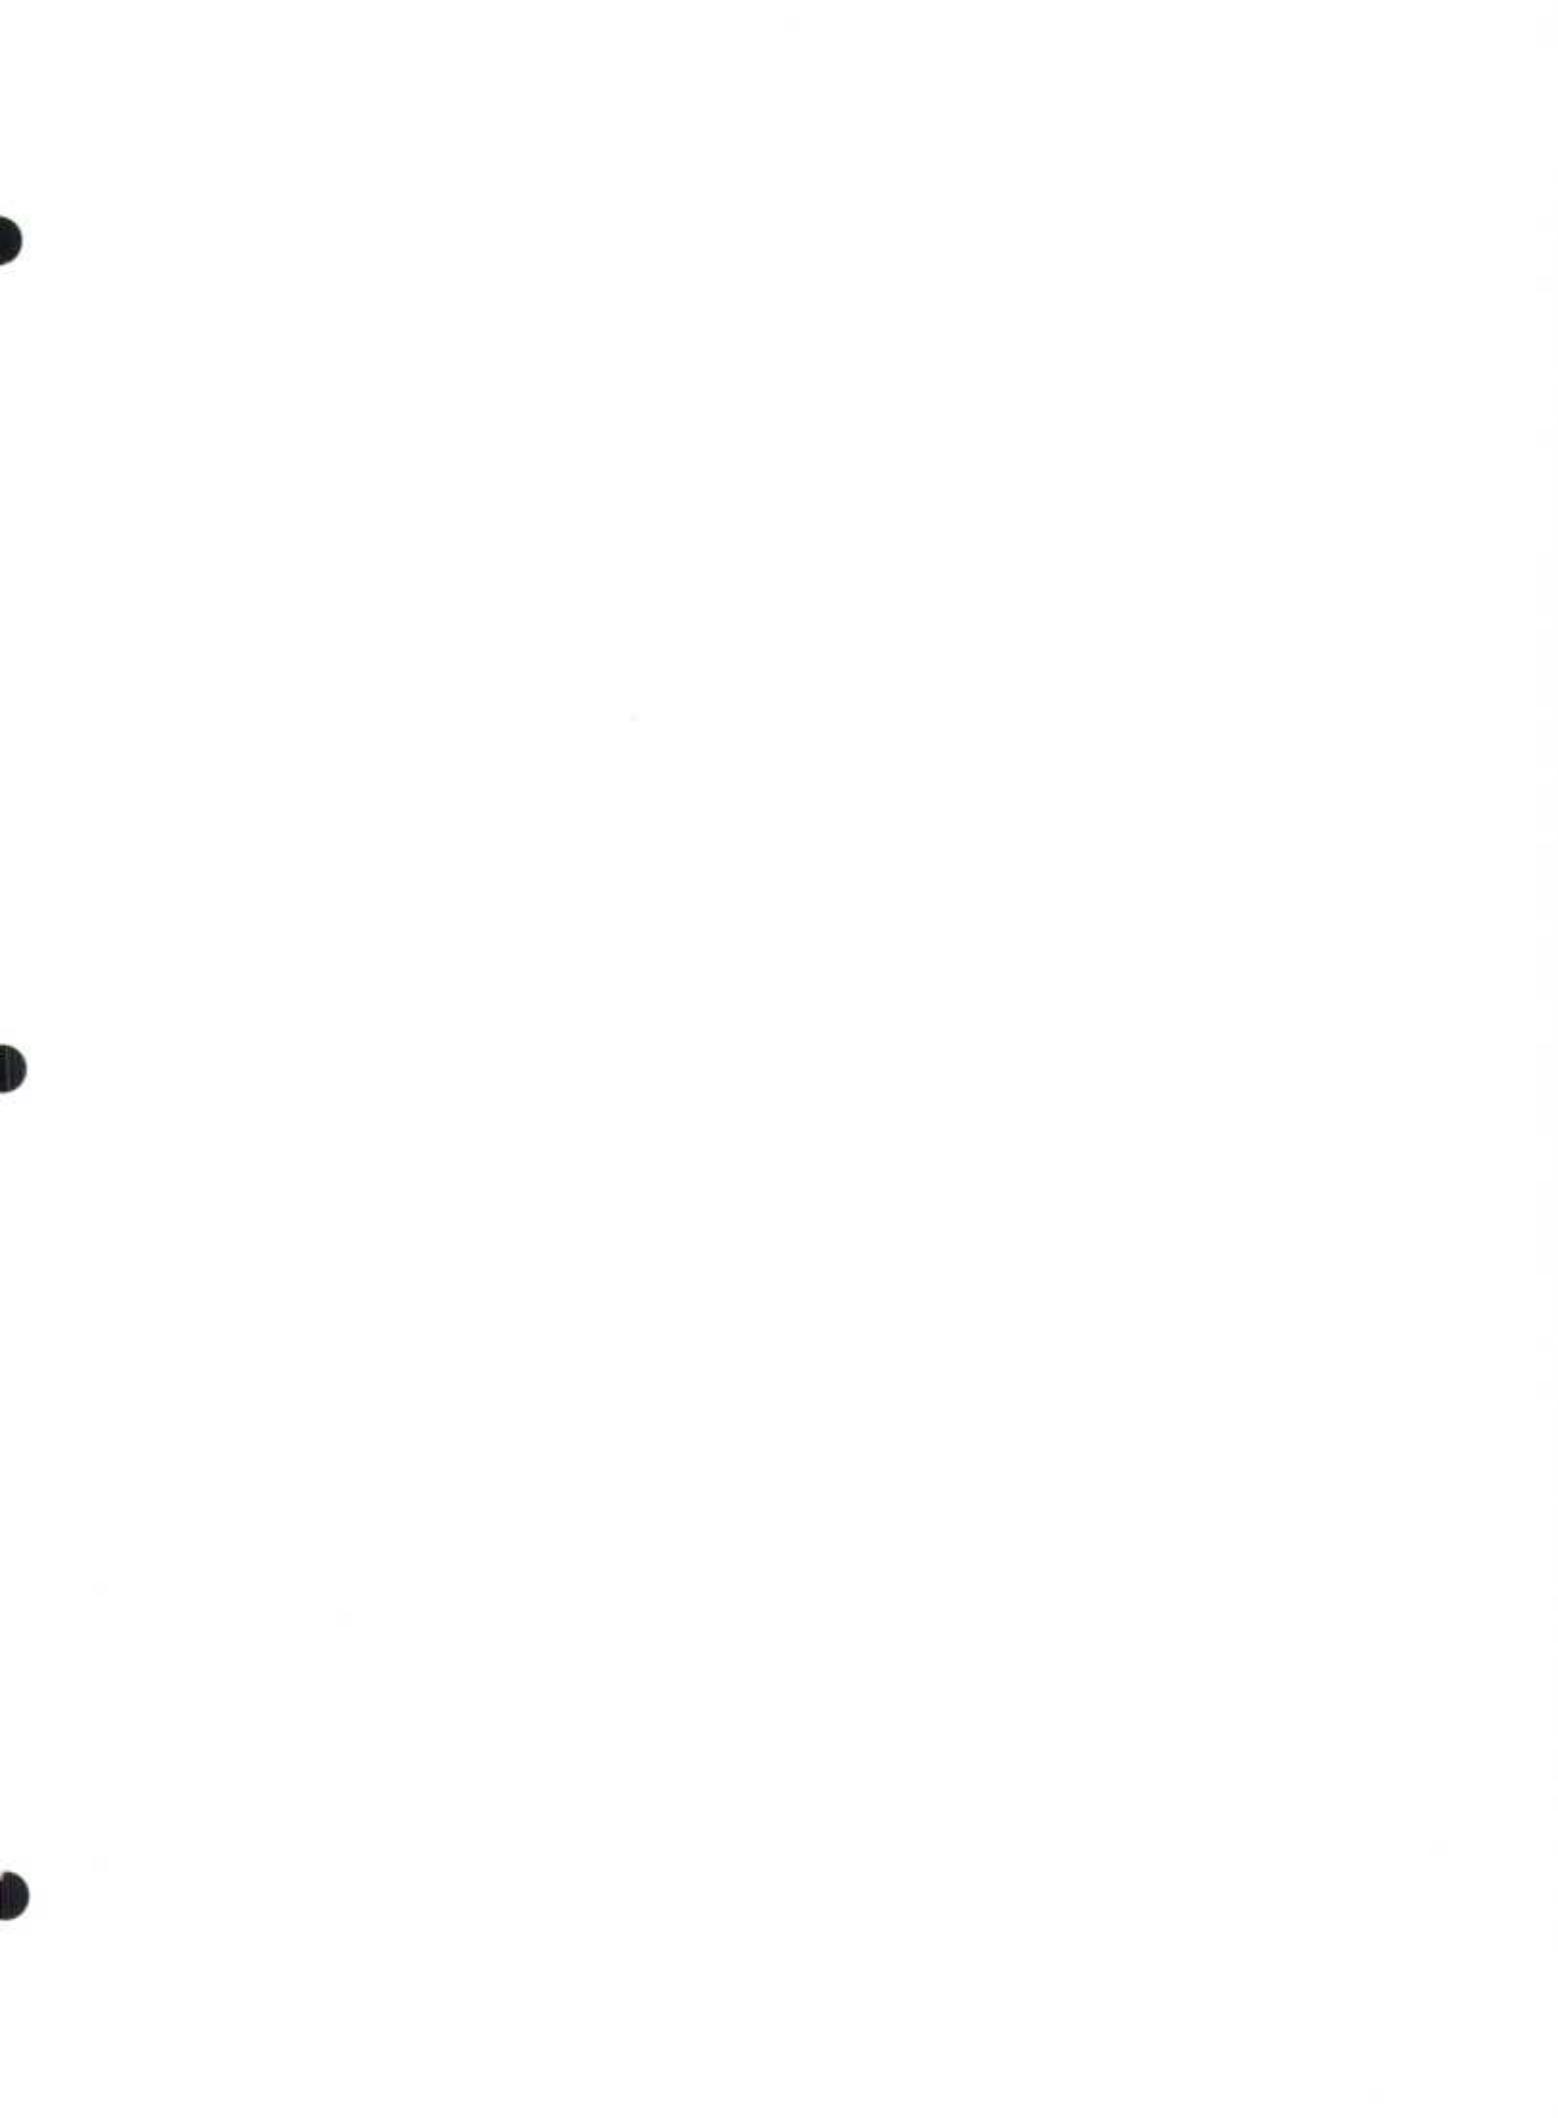

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.
