Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

Des données sous plusieurs formes

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur Internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolinguage et le système d'extraction de Statistique Canada.

Note of appreciation

Canada owes the success of its statistical system to a long-standing co-operation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Highlights

Industrial Product Price Index

In February, industrial product prices were unchanged from a year ago. This followed 4 months when the 12-month change had been negative. Compared with January, industrial prices were up 0.1%. This was primarily due to the slight rise in the value of the U.S. dollar against the Canadian dollar.

Chart 1

February sees end of negative 12-month changes for industrial prices

Faits saillants

Indice des prix des produits industriels

En février, les prix des produits industriels sont demeurés stables comparativement à ceux de février 1996, après quatre mois de variation négative d'une année à l'autre. Par rapport à janvier, les prix des produits industriels ont monté de 0,1%, conséquence surtout de la légère appréciation du dollar américain par rapport au dollar canadien.

Graphique 1

Février sonne la fin des changements négatifs sur 12 mois des prix industriels

The February increase in the value of the U.S. dollar against the Canadian dollar raised the value in Canadian dollars of all export prices quoted in U.S. currency. This increased the month-to-month change in industrial prices from slightly under zero to an increase of 0.1%. The impact was most noticeable for motor vehicles, pulp, paper and wood products. Producers frequently quote export prices for these items in U.S. dollars.

In February, the most important monthly price increases were for non-ferrous metal products, motor vehicles and parts, and softwood lumber. Declines in petroleum products, newsprint and pulp prices partly offset the increases.

Much of February's increase in motor vehicle prices was due to the change in the value of the Canadian dollar. While automobile domestic prices rose 0.1% and truck domestic prices rose 0.3%, export prices were up 0.5% for automobiles and 0.6% for trucks. As 1997 opened, domestic sales of new motor vehicles were noticeably higher than in the two previous years.

Price increases for non-ferrous metal products were quite widespread in February. They included increases for aluminum and nickel products, copper and copper alloy products and refined zinc.

L'appréciation du dollar américain par rapport au dollar canadien en février a relevé l'ensemble des prix à l'exportation cités en dollars américains. Cela a porté la variation d'un mois à l'autre des prix des produits industriels d'un peu moins de zéro à 0,1%. Les conséquences ont été les plus visibles pour les prix des véhicules automobiles, des pâtes, du papier et des produits du bois. Les producteurs citent souvent les prix de ces produits en dollars américains.

En février, les augmentations mensuelles de prix les plus importantes ont touché les produits métalliques non ferreux, les véhicules automobiles et leurs pièces ainsi que le bois résineux de construction. Les baisses de prix des produits pétroliers, du papier journal et des pâtes à papier ont partiellement effacé ces augmentations.

Le gros de la hausse de prix des véhicules automobiles en février venait de la fluctuation du dollar canadien. Tandis que les prix intérieurs des automobiles se sont accrus de 0,1% et ceux des camions, de 0,3%, les prix à l'exportation des automobiles ont augmenté de 0,5% et ceux des camions, de 0,6%. Au début de 1997, les ventes intérieures de véhicules automobiles neufs ont été nettement plus élevées que celles des deux années précédentes.

Les augmentations de prix des produits métalliques non ferreux ont été plus généralisées en février. Les augmentations de prix ont touché les produits de l'aluminium et du nickel, les produits du cuivre et d'alliages de cuivre ainsi que le zinc raffiné.

Aluminum product prices were up 3.2% in February. They have recovered 11.7% since November 1996 but are still 21.7% below their peak of February 1995. As prices recover, some idle Canadian aluminum capacity may be brought back on line.

There were also monthly price increases in February for nickel products (+3.4%), copper and copper alloy products (+0.6%) and refined zinc (+5.1%). Compared with their peaks in January 1995, however, prices were down 24.6% for nickel products, 21.8% for copper and copper alloy products, and 6.0% for refined zinc.

During 1994, a bull market existed for metals. This was the result of a combination of strong world demand for non-ferrous metals, together with agreements to cut production of certain metals, along with the actions of speculators. Prices for aluminum, copper and nickel products then headed generally downward during 1995 and much of 1996.

In February, the overall manufacturers' price level for gasoline and fuel oil was down 1.7%. This ended six months of increases during which time prices rose 13.8%. Crude oil prices began declining in January and continued to fall in February, dropping 11.9%. Consumer prices for gasoline at the fuel pumps continued to rise in February, increasing 1.5%.

In February, newsprint prices were down in both Canada and the United States. In Canada, manufacturers' prices for newsprint continued to decline (-0.4%) to stand 29.3% lower than a year earlier. The United States experienced similar monthly and 12-month price movements.

Pulp prices in Canada also edged down in February (-0.5%) and stood 23.7% lower than in February 1996. In the United States, price movements were roughly similar to those in Canada.

During 1996, both the newsprint and pulp industries were troubled by sizeable inventories relative to their level of demand. The industry has been striving to bring down inventory for both products but progress has been slow.

In Canada, softwood lumber prices rose slightly in February, increasing by 0.7%. In the United States, softwood lumber prices were up 1.6% from the previous month. In Canada, softwood prices were up 20.1% from a year earlier. In the United States, they were 21.6% higher. Housing starts were up sharply in both Canada and the United States.

The Canadian economy was showing signs of strengthening as 1997 opened. According to the latest figures, shipments were up 2.2% in January after being relatively flat in the second half of 1996. Both unfilled and new orders were also up noticeably in January. Despite the increase in output, employment in manufacturing showed little change in either January or February.

Exports jumped 3.1% in January. Retail sales were also up, rising 1.4%.

Planned capital expenditure by private and public organizations for 1997 is reported to be 5.2% higher than estimated expenditures for 1996, and 8.2% more than actual expenditures in 1995.

Les prix des produits de l'aluminium ont monté de 3,2% en février. Malgré une reprise de 11,7% depuis novembre 1996, ils sont demeurés à 21,7% en deçà de leur sommet de février 1995. Avec la reprise des prix, les alumineries canadiennes pourraient réexploiter une part de leur capacité inutilisée.

En février, il y a également eu des augmentations mensuelles de prix des produits du nickel (+3,4%), des produits du cuivre et d'alliages de cuivre (+0,6%) ainsi que du zinc raffiné (+5,1%). Par rapport à leurs sommets de janvier 1995, toutefois, les prix des produits du nickel ont fléchi de 24,6%, ceux des produits du cuivre et d'alliages de cuivre, de 21,8%, et ceux du zinc raffiné, de 6,0%.

En 1994, les métaux ont connu un marché haussier. Il s'agit du résultat d'une vigoureuse demande mondiale de métaux non ferreux, conjuguée à des accords de réduction de production de certains métaux et à l'action des spéculateurs. Les prix des produits de l'aluminium, du cuivre et du nickel ont ensuite suivi une courbe généralement descendante en 1995 et pour une bonne part de 1996.

En février, le niveau d'ensemble des prix de l'essence et du mazout a fléchi de 1,7% au niveau des fabricants. Cela a mis fin à six mois d'augmentations au cours desquels la progression avait été de 13,8%. Le prix du pétrole brut a amorcé un repli en janvier et l'a poursuivi en février, pour chuter de 11,9%. Les prix à la consommation de l'essence à la pompe ont continué leur progression en février, avec une hausse de 1,5%.

En février, les prix du papier journal ont fléchi au Canada comme aux États-Unis. Au Canada, les prix des fabricants de papier journal ont poursuivi leur régression (-0,4%), qui les a ramenés à 29,3% plus bas que ceux d'un an plus tôt. Aux États-Unis, les variations d'un mois à l'autre et d'une année à l'autre étaient fondamentalement semblables.

Les prix des pâtes de bois au Canada ont aussi fléchi (-0,5%) en février, pour atteindre 23,7% de moins qu'en février 1996. Aux États-Unis, les mouvements de prix étaient à peu près les mêmes.

En 1996, les industries du papier journal et des pâtes ont été perturbées par le niveau très considérable de leurs stocks par rapport à leur niveau de demande. Les industries se sont efforcées de diminuer leurs stocks, mais les progrès ont été lents.

Au Canada, les prix du bois de construction ont monté légèrement en février, soit de 0,7%. Aux États-Unis, les prix du bois de construction ont progressé de 1,6% par rapport au mois précédent. Au Canada, les prix du bois de construction ont monté de 20,1% par rapport à ceux d'un an plus tôt. Aux États-Unis, la hausse a été de 21,6%. Le nombre de mises en chantier d'habitations, au Canada comme aux États-Unis, a fait un bond vigoureux en février.

L'économie canadienne affichait des signes de raffermissement au début de 1997. Selon les derniers chiffres, les livraisons ont augmenté de 2,2% en janvier, après être restées relativement stables dans la deuxième moitié de 1996. Les commandes en carnet et les nouvelles commandes ont aussi connu une augmentation remarquable en janvier. Malgré la croissance de la production, l'emploi dans les industries manufacturières a peu changé en janvier ou en février.

Les exportations ont fait un bond de 3,1% en janvier. Les ventes de détail ont aussi monté, soit de 1,4%.

Les immobilisations prévues par les secteurs privé et public pour 1997 dépassent de 5,2% les dépenses estimées pour 1996 et de 8,2% les dépenses effectives de 1995.

Les prix du secteur forestier des pâtes de bois et du papier journal fléchissent

In the United States, Canada's major trading partner, producer prices were down marginally for both finished and intermediate (input) goods in February. Industrial production in the United States, however, increased 0.5% overall with output up in the manufacturing sector (+0.8%).

In Japan, the 12-month change in industrial prices edged up to 1.0% in January. This occurred as industrial production jumped 5.6% from its December level and manufacturing shipments leaped 6.4%.

Among European members of the G7, the United Kingdom continued to have the highest 12-month change in industrial prices (+1.3% for February), followed by Germany (+0.6%). The United Kingdom also continued to have the lowest unemployment rate—just over half that of the other three European members of the G7. In January, industrial production was unchanged in the United Kingdom but down in Germany. Figures for industrial production in France and Italy indicate that, in the last quarter of 1996, production was down somewhat from the third quarter.

Aux États-Unis, premier partenaire commercial du Canada, il y a eu en février un léger repli des prix à la production, tant des biens finis que des biens intermédiaires (intrants). La production industrielle américaine, toutefois, a gagné 0,5% au total, tandis que celle du secteur manufacturier s'est accrue de 0,8%.

Au Japon, la variation d'une année à l'autre des prix des produits industriels a atteint 1,0% en janvier, à la faveur d'un bond de 5,6% de la production industrielle par rapport à décembre et d'un bond de 6,4% des livraisons des industries manufacturières.

Parmi les membres européens du G7, le Royaume-Uni conserve en février la plus forte variation sur 12 mois des prix des produits industriels (+1,3%), suivi de l'Allemagne (+0,6%). Le Royaume-Uni a toujours le plus faible taux de chômage, qui n'est qu'un peu plus de la moitié de celui des trois autres membres européens du G7. En janvier, la production industrielle n'a pas bougé au Royaume-Uni, mais elle a diminué en Allemagne. Selon les données du dernier trimestre de 1996 sur la production industrielle en France et en Italie, la production a diminué légèrement par rapport au troisième trimestre.

Note to readers

The Industrial Product Price Index (IPPI) reflects the prices that producers receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time when a good leaves the plant and the time when the final user takes possession of it, including the transportation, wholesale and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper and wood products. A rise or fall in the value of the Canadian dollar against the U.S. dollar therefore affects the IPPI. A 1.0% change in the value of the Canadian dollar against the U.S. dollar has been estimated to change the IPPI by approximately 0.2%.

Note aux lecteurs

L'indice des prix des produits industriels (IPPI) reflète les prix que les producteurs reçoivent au moment où les produits franchissent les portes de l'usine. Il ne reflète pas ce que les consommateurs paient. Contrairement à l'indice des prix à la consommation, l'IPPI exclut les impôts indirects et tous les coûts qui surviennent entre le moment où un produit sort de l'usine et le moment où l'utilisateur final en prend possession, ce qui comprend les coûts du transport, du commerce de gros et du commerce de détail.

Les producteurs canadiens exportent beaucoup de biens. Ils vont souvent donner leurs prix en devises étrangères, en particulier dans le cas des véhicules automobiles, de la pâte de bois, du papier et des produits du bois. Les fluctuations du dollar canadien par rapport à la devise américaine se répercuteront par conséquent sur l'IPPI. Une variation de 1,0% du dollar canadien par rapport au dollar américain, selon les estimations, se traduit par une variation d'environ 0,2% de l'IPPI.

Highlights

Raw Materials Price Index

In February, manufacturers raw material prices declined 3.2% compared with January. This drop was almost entirely due to significantly lower crude oil prices. Excluding mineral fuels (this category is more than 90% crude oil) raw material prices would have edged up 0.6%.

Compared with 12-months earlier, raw material prices were up 5.5%. Again, if mineral fuels were excluded, raw material prices would be up marginally (+0.2%) compared with February 1996.

Faits saillants

Indice des prix des matières brutes

En février, les fabricants ont payé leurs matières brutes 3,2% de moins qu'en janvier, ce qui est presque entièrement attribuable à des diminutions appréciables du prix du pétrole brut. Si l'on exclut la catégorie des combustibles minéraux (dont 90% est du pétrole brut), les prix des matières brutes auraient en réalité augmenté de 0,6%.

Par rapport à février 1996, les prix des matières brutes ont monté de 5,5%. Si les combustibles minéraux étaient exclus, les prix des matières brutes auraient augmenté légèrement de 0,2%.

Graphique 3

Le pétrole brut entraîne les prix des matières brutes à la baisse

In February, lower monthly prices for crude oil (-11.9%) and logs (-0.8%) were somewhat offset by higher vegetable product (+2.8%) and cattle prices (+4.3%). As well, slightly lower prices for hogs, wheat, canola and gold further reduced the overall movement of raw material prices.

Crude oil prices fell 11.9% in February, however, they were still 21.0% higher than a year earlier. Marginally warmer weather and moderate increases in supply contributed to the lower crude oil prices. However, crude oil inventories still show little relative change from 1996. As the heating oil season is nearing an end, the gasoline season will soon kick in, potentially adding upward pressure to crude oil prices. Between March and July, refiners boost crude oil requirements to meet peak summer gasoline needs.

On a month-to-month basis, vegetable product prices were up 2.8% in February. Higher prices for coffee, raw tobacco and soybeans were partly offset by lower prices for grains and canola. Compared with a year earlier, vegetable product prices were down 5.0%. Lower prices for grains, rubber and unrefined sugar were somewhat offset by higher prices for raw tobacco, coffee and oilseeds. Coffee prices were recently subject to intense upward pressure. Rain in South America, labour problems in Colombia and the reliance of just-in-time inventory practices by coffee roasters (similar practices are already in place for crude oil refiners) have pushed prices up.

En février, les diminutions mensuelles des prix du pétrole brut (-11,9%) et des billes de bois (-0,8%) ont été dans une certaine mesure éponnées par les augmentations de prix des substances végétales (+2,8%) et des bovins (+4,3%). Par ailleurs, de légers replis des prix des porcs, du blé, du canola et de l'or ont aussi contribué au mouvement d'ensemble des prix des matières brutes.

Le prix du pétrole brut a chuté de 11,9% en février. Cependant, il est demeuré 21,0% plus haut qu'en février 1996. Un temps légèrement plus chaud et des augmentations modérées de l'offre ont contribué au recul du prix du pétrole brut en février. Cependant, les stocks de brut accusent toujours des changements relatifs par rapport à leur niveau de 1996. La fin imminente de la saison du mazout de chauffage annonce le début de la saison de l'essence, qui risque d'ajouter aux effets d'entraînement du prix du pétrole brut. La période de mars à juillet est celle où les raffineurs augmentent leurs besoins de brut en prévision de la demande estivale d'essence.

En février, les prix des substances végétales se sont accrus de 2,8% par rapport à janvier. Les augmentations de prix du café, du tabac en feuilles et du soya ont été partiellement compensées par les diminutions de prix des céréales et du canola. Par rapport à février 1996, les prix des substances végétales ont baissé de 5,0%. Les diminutions de prix des céréales, du caoutchouc et du sucre non raffiné ont été dans une certaine mesure éponnées par les augmentations de prix du tabac en feuilles, du café et des graines oléagineuses. Les prix du café ont récemment fait l'objet d'intenses pressions. Les pluies qui ont frappé l'Amérique du Sud, les problèmes de main-d'oeuvre en Colombie et les pratiques du juste-à-temps chez les grilleurs de café (qui ont déjà cours chez les raffineurs de pétrole brut) ont propulsé les prix à la hausse.

The recent sharp decline in wheat prices, down 23.8% over the last year, contrasts with the increase in canola prices (+5.5%) over the same period. If wheat prices remain weak, farmers may shift some acreage from wheat to canola this spring.

Soybean prices (+8.9%) in February may be subject to further increases as world supply remains tight. Brazil, the world's second largest grower of soybeans, was recently hit with heavy rains, slowing their harvest.

L'effondrement récent des prix du blé, qui ont reculé de 23,8% au cours des 12 derniers mois, fait contraste avec l'augmentation des prix du canola (+5,5%) au cours de la même période. Si les prix du blé demeurent faibles, les agriculteurs pourraient réaffecter certaines superficies de blé à la production de canola, dont la valeur est plus grande.

Les prix du soya, qui ont monté de 8,9% en février, pourraient connaître d'autres augmentations, car l'offre mondiale demeure serrée. Le Brésil, deuxième producteur mondial de soya, a été frappé récemment par des pluies abondantes, qui ont retardé la récolte.

Animals and animal product prices edged up 0.8% in February over the previous month. Higher prices for cattle (+4.3%) were marginally offset by lower prices for hogs (-0.9%). Compared with a year earlier, animals and animal product prices were up 5%. Higher prices for cattle (+9.2%), hogs (+7.5%) and milk (+2.7%) were partly diminished by lower fish prices (-3.5%).

Les prix des animaux et des substances animales ont gagné 0,8% en février par rapport au mois précédent. Les augmentations de prix des bovins (+4,3%) ont été légèrement compensées par des diminutions de prix des porcs (-0,9%). Depuis 12 mois, les prix des animaux et des substances animales ont monté de 5%. Les augmentations de prix des bovins (+9,2%), des porcs (+7,5%) et du lait (+2,7%) ont été ralenties par les diminutions de prix du poisson (-3,5%).

On a month-to-month basis, prices for non-ferrous metals increased slightly in February (+0.3%). Higher prices for aluminum materials (+3.0%), zinc (+5.5%) and nickel concentrates (+5.8%) were greatly offset by lower prices for radioactive concentrates (-5.1%), lead concentrates (-2.4%) and gold (-1.1%). On a yearly basis, non-ferrous metal prices were down 8.2%. The major contributors to the drop were gold (-15.8%) and copper (-7.2%). There is great uncertainty as to whether copper supplies will meet expected demand in the coming months. The improving economic outlook in Japan and Europe, as well as manufacturers preparing for what is usually the busiest season for homebuilding may exert upward pressure on copper prices.

Par rapport à janvier, les prix des métaux non ferreux ont connu une légère progression en février (+0,3%). Les augmentations de prix des matières d'aluminium (+3,0%), du zinc (+5,5%) et des concentrés de nickel (+5,8%) ont été dans une large mesure effacées par les reculs des prix des concentrés radioactifs (-5,1%), des concentrés de plomb (-2,4%) et de l'or (-1,1%). Par rapport à février 1996, les prix des métaux non ferreux ont fléchi de 8,2%. Les principaux responsables sont les prix de l'or (-15,8%) et du cuivre (-7,2%). Il y a beaucoup d'incertitude à savoir si l'offre de cuivre répondra à la demande prévue dans les mois à venir. Puisque les perspectives économiques s'améliorent au Japon et en Europe et que les fabricants se préparent à la saison habituellement la plus occupée pour la construction domiciliaire, il risque d'y avoir des effets d'entraînement sur les prix du cuivre.

Note to readers

The Raw Materials Price Index (RMPI) reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Also, unlike the industrial product price index, the RMPI includes goods that are not produced in Canada.

Note aux lecteurs

L'indice des prix des matières brutes (IPMB) est représentatif du prix que paient les fabricants canadiens pour les principales matières brutes. Un grand nombre de ces prix sont fixés sur le marché mondial. De même, contrairement à l'indice des prix des produits industriels, l'IPMB inclut des biens qui ne sont pas produits au Canada.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative and the All Manufacturing Industries is adjusted to match. - L'aggrégation des indices par produits ou par industries devrait résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where

ss indicates the S-level commodity code (from 9 to 28).

mm indicates the M-level commodity code (from 14 to 43, 45 to 69).

nn indicates the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates special details.

pppp indicates the PCG code (except for some special aggregations which include several PCGs).

rr indicates a split of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E+S) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information, order Industrial Price Indexes 1981=100, Concepts and Methods (Catalogue 62-556-XPB).

1) En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présentées, en tout ou en partie, l'information suivante: le numéro de code Databank de CANSIM (D nnnnnn), un numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique prend la forme générale ss-mm-nn-pppp-rr où

ss indique le code du niveau S des produits (de 9 à 28).

mm indique le code du niveau M des produits (de 14 à 43, 45 à 69).

nn indique soit une composante du niveau M des produits, ou prend la valeur de 91 pour les agrégats spéciaux, ou de 99 pour les indices particuliers.

pppp indique le code GPP (sauf pour certains agrégats spéciaux qui comprennent plusieurs GPP).

rr indique une composante d'un GPP.

La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un échantillonnage exhaustif, S indique un échantillonnage sommaire et P indique une estimation indirecte. Pour les indices composites, la donnée en pourcentage représente une estimation du degré de couverture par échantillonnage direct (E + S). Ces mesures du degré de couverture sont parfois arrondies au 5% le plus près afin d'assurer la confidentialité. La mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices les plus stables sont cotés A, les moins stables, D. - (1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match. — L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice du total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice de toutes les industries manufacturières sera posé égal.
- (2) The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality. — Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industrial Product Price Indexes (1986=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1986 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in the Daily Bulletin (Catalogue no. 11-001-XPB) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue no. 62-011-XPB, Industry Price Indexes, is released about four weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, where in important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1986. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

SOURCES SUPPLÉMENTAIRES DES MÉTHODES UTILISÉES ET DES INDICES DES PRIX INDUSTRIELS

Indices des prix des produits industriels (1986=100)

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1986. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ quatre semaines après la fin du mois de référence dans le Quotidien (n° 11-001-XPB au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011-XPB au catalogue, Indices des prix de l'industrie, paraît quatre semaines environ après le communiqué dans le Quotidien. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1986. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1986 Input/Output table which, in turn, is derived from 1986 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within commodity weights can change in December of each year to reflect major changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1986 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1986-based Industrial Product Price Indexes (IPPI) series and the corresponding 1981-based Industrial Product Price Indexes (IPPI) series, using the year 1986 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both set of IPPI series are available to the public.

Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1986, laquelle à son tour est établie à partir des valeurs de 1986 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w^i sont les valeurs de la production de chaque produit:

$P_{t/o}^{(agg)}$ dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini;

w^i est la valeur de transaction de l'élément i au cours de la période de référence;

$P_{t/o}^i$ est l'indice de prix de l'élément i , désignant sa variation de prix entre la période de référence et la période t ;

\sum_i signifie la sommation de tous les éléments i dans l'agrégat défini.

Données historiques

Les séries historiques sur la base 1986 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1986 et des séries correspondantes des indices des prix des produits industriels (IPPI) basées sur 1981, l'année 1986 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les deux ensembles de séries IPPI sont disponibles au public.

Raw Materials Price Indexes (1986=100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1986 time base, are published monthly in the Daily Bulletin approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2009.

These indexes are a continuation of the previously published Raw Materials Price Indexes, 1981=100. The new, 1986=100 indexes can be linked with their equivalents in the 1981=100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Indices des prix des matières brutes (1986=100)

Les indices des prix des matières brutes (IPMB) mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitué recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1986, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ quatre semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 2009 de CANSIM.

Ces indices constituent la suite des Indices des prix des matières brutes, 1981=100, précédemment publiés. Les nouvelles séries basées 1986=100 peuvent être raccordées à leurs séries équivalentes basées 1981=100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990, et répétés dans le numéro de décembre de la présente publication.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes nettes payées et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Weights were derived from the 1986 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs.

Les pondérations furent dérivées des tableaux d'entrées-sorties de 1986, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

$P_{t/o}^{(agg)}$ dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié;

w^i is the transaction value of the element i in 1986;

w^i est la valeur de transaction de l'élément i en 1986;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

$P_{t/o}^i$ est l'indice de prix de l'élément i , c'est-à-dire son changement de prix de la période de référence o à la période courante t ;

\sum_i indicates summation over all elements i in the defined aggregate.

\sum_i indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

À l'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché pour une année récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

Electric Power Selling Price Indexes Non-residential, (1986=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1986 as a time reference base and the weights used are 1986 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1986=100, technical notes presented above. The indexes are available on CANSIM in matrix 2020. Indexes for the current year and the previous year are subject to revision.

These indexes are a continuation of the previously published Electricity Selling Price Indexes, 1981=100. The new, 1986=100 indexes can be linked with their equivalents in the 1981=100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

Indices des prix de vente de l'énergie électrique, non-résidentielle, (1986=100)

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de référence 1986, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1986, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1986=100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 2020. Les indices de la présente année et de l'année précédente sont sujets à révision.

Ces indices constituent la suite des indices des prix de vente de l'énergie électrique, 1981=100, précédemment publiés. Les nouvelles séries basées 1986=100 peuvent être raccordées à leurs séries équivalentes basées 1981=100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990 et répétés dans le numéro de décembre de la présente publication.
