Price: 30 cents  
\$3.00 a year

Volume 7, No. 11

#### EXPLANATORY NOTES

The figure "2" after the name of the municipality indicates that the report was not received from the municipality in time for publication. If the figure "2" is not present and all columns are blank, it indicates that a "nil" report was received or that the value of permits issued during the month was less than \$500.

The letter X before the name of the municipality indicates that it is an urban centre of less than 5,000 population situated outside a Metropolitan or a Major Urban area.

#### Abbreviations used -

C. -	City	P. -	Parish
C.P.A. -	Community Planning Area	R.M. -	Rural Municipality
D. -	District	S.V. -	Summer Village
I.D. -	Improvement District	T. -	Town
L.G.C. -	Local Government Community	Twp. -	Township
M. -	Municipality	V. -	Village

2. Building Permits Issued in Canada by Province - November 1963 .....	14
3. Building Permits Issued in Canada by Province - October 1963 (Revised) ...	14
4. Building Permits Issued in Canada by Province for Urban Centres of over and under 5,000 population - November 1963 .....	15
5. Building Permits Issued in Canada by Province for Urban Centres of over and under 5,000 population - October 1963 (Revised) .....	15
6. Building Permits Issued in Canada by Province, Economic Region, Metro- politan Area and Municipality - November 1963 .....	16

## INTRODUCTION

The Dominion Bureau of Statistics conducts a monthly survey of building permits issued in Canada. The material contained in this publication is compiled from data supplied by the issuing municipalities and therefore, varies from municipality to municipality with the terms of each individual by-law, with the methods of estimating the value of construction for permit issuing purposes and with the diligence with which the terms of the by-law are applied. Information is not available on the permits allowed to lapse without the work for which the permit was issued being completed.

This publication presents statistics on building permits issued during the month for each municipality reporting in the survey. Totals are available for metropolitan areas, for economic regions in certain provinces, for provinces and finally for the country as a whole. The municipalities are listed individually showing building permits issued according to the following classifications:

### 1. Residential

- (a) Number of dwelling units created for single dwellings, double dwellings, apartments, conversions of existing structures into new dwelling units and total number of dwelling units.
- (b) Value of building permits issued for new residential construction and repair.

### 2. Non-Residential

Value of building permits issued for new and repair construction for: industrial, commercial, institutional and government construction.

Area totals are the sum of the reporting municipalities and there is no allowance for municipalities not covered in the survey and for municipalities issuing permits but not reporting in the survey for the month in question. In some cases, reports from municipalities are received too late to be included in the relevant compilation; these municipalities are listed in the publication of the following month and a revised summary of building permits by province and for Canada as a whole is made available in that month.

## DEFINITIONS

Residential - includes only self-contained housing units and, therefore, excludes such structures as barracks and dormitories.

Number of units shown under Residential housing indicates the number of self-contained dwelling units added. For example, if an apartment building is constructed and contains 6 apartments, it will be shown as 6 dwelling units. When an existing structure is converted into additional housing units, the number of units added is included. The values of the permits issued for such conversions are included with new residential construction.

Apartments include all multiple housing with 3 or more units such as triplexes, rows and terraces, as well as apartments. Flats, regardless of number, that are part of a non-residential structure are also included.

Single residential units includes only one unit dwellings.

Double residential units includes all two unit dwellings such as doubles and duplexes.

Conversions include number of dwelling units added by conversions of existing structures.

New Residential Construction includes the value of building permits issued for entirely new residential work including detached and attached garages. The values of conversion permits are also included in this group.

Repair Residential Construction includes permits issued for major alterations, improvements, and additions as well as smaller types of repair.

This definition of repair is at variance with that used in Construction in Canada(1) and Private and Public Investment Outlook(2) which classify major alterations, improvements and additions as new construction and only those expenditures which return the structure to its previous state, such as painting and pointing of brick work, as repair. When this latter category of activity is covered by a building permit, it is included in the total of repair.

#### NATURE OF CLASSIFICATION

This classification is one of buildings or structures for which a building permit was issued by a municipality. A building permit may be issued by municipalities for: construction of new buildings; repairs, alterations, additions or conversions to existing buildings; installations of heating, plumbing and other facilities; erection of signs, posters, canopies, etc., and other improvements to property.

The classification for non-residential buildings or structures is divided into three major groups pertaining to the use of the structures for industrial, commercial and government and institutional purposes. These major groups are further sub-divided into principal categories of each major group.

1. Industrial - includes buildings used for: manufacturing and processing; transportation, communication and other utilities and agriculture, forestry, mine and mine mill buildings.
2. Commercial - includes stores, warehouses, garages, office buildings, theatres, hotels, funeral parlours, beauty salons and miscellaneous commercial - signs, posters, heating and plumbing installations, etc.
3. Institutional and Government - includes expenditures made by the community, public and government for buildings and structures - schools, universities, hospitals, clinics, churches, homes for the aged, blind, deaf and dumb, government office and administration buildings, law enforcement, public protection, national defence, and ancillary buildings such as dormitories, residences, church rectories, gymnasiums, heating plants, laundries and cafeterias for hospitals, schools or universities.

#### BASIS FOR CLASSIFICATION

Classification of structures into major groups and sub-groups is dependent upon: the intended use of the structure in case of new buildings; the present or intended use of the building to which repairs and other improvements are being made; affiliation of the structure where the proposed structure is to provide ancillary facilities to the existing buildings; the principal use of the building where the intended use of the building is for more than one purpose.

On the building permit forms the municipality reports; name and address of applicant (owner or agent); location of construction; intended use of the buildings - factory, school, church, etc.; class of work done - new, repair, etc.; the value of the proposed construction; and in case of residential construction, number of dwelling units created.

The description given as to the intended use of the building, forms the basis for classification. If the structure is a new building or conversion it is classified according to its intended use such as a factory, school, church, hospital, etc. Where the expenditure is of a repair nature, including all improvements to the property, alterations and additions, it may be classified as to the present use of the building, to which repairs are made or its intended use. If the repair construction consists of installation of heating, plumbing or other such facilities, it will be classified as to the present use of the building. Where it includes an addition, such as a warehouse, to a store, it will be classified to its intended use.

Where the new or repair construction for institutional and government purposes provides additional facilities for existing buildings, these are classified according to the intended use of the existing structures. Examples are heating plants, cafeterias, nurses' residence for hospitals; dormitories, gymnasiums, libraries for universities; ancillary structures on prison farms, on Navy, Army and Air Force bases, etc.

(1) Published by the Dominion Bureau of Statistics.

(2) A joint publication of the Economics Branch of the Department of Trade and Commerce and the Dominion Bureau of Statistics.

A structure may have more than one intended use and therefore fall into more than one classification, and may be classified as to the principal use of the structure, or the value of proposed construction may be divided into more than one appropriate category. Where part of the structure is to provide additional facilities, whose value in relation to the principal use of the structure is relatively small, it will be classified as to its principal use. If the structure is a store and apartment, store and office building, restaurant and office building, etc., the value of the proposed construction may be divided among the appropriate classifications. However, where the principal use of the structure is a shopping centre but provides additional facilities such as banks, restaurants, etc., it will be classified as stores - the principal use of the structure.

#### COVERAGE

The coverage of the Building Permit Survey can best be expressed in terms of the population of the municipalities covered in the survey compared to the total population. The following table shows data which may be used to approximate the coverage of the survey. As an example for Canada as a whole:

Column 1 - shows the population of the country in 1961.

Column 2 - shows the total population of municipalities issuing building permits.

Column 3 - shows the total population of the municipalities reporting in the survey in 1961.

Thus, in 1961, 78.4% of the Canadian population resided in municipalities issuing building permits and 68.3% resided in municipalities reporting in the survey; the proportion of the population of the municipalities reporting in the survey to the population of municipalities issuing building permits was 87.2%.

Prior to 1963 not all municipalities issuing building permits were being requested by D.B.S. to provide information on building permits. However starting in 1963 efforts are made to secure data from all municipalities issuing permits. Thus, the coverage in terms of population may be expected to increase but not materially, the population of the municipalities not reporting in the survey taken as a group being relatively small.

Although the results of the Building Permit Survey are often used as a leading indicator of building activity they may not be construed as representing the total construction activity in the country. Large projects such as hydro-electric developments, pipelines, highways, do not require a building permit, and frequently large industrial plants are constructed outside the boundaries of a building permit issuing municipality.

Approximate Coverage of The Building Permit Survey
