NEW RESIDENTIAL CONSTRUCTION

August, 1958

Introduction

The statistics contained in this report are the results of a nationwide survey carried out each month by the Dominion Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and urban centres of 5,000 population and over, as well as other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis with about 800 sample areas selected for enumeration.

A column headed "Adjustments" appears in Table 1. These adjustments can arise in various ways. For example, after a start on a dwelling has been made construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Definitions

The count of dwellings which are started, completed, and under construction includes only new residential construction intended for year-round occupancy. Seasonal dwellings such as summer cottages, ski shacks, etc., are not counted. Dwellings which are occupied even if unfinished, are regarded as completed for the purposes of this survey.

Types of dwelling:

- (i) 1-family detached - a one-family house open on all four sides, i.e., not joined to other buildings;
- (ii) 2-family detached - a two-family house which contains only two dwelling units, either one above the other open on all four sides, or two units side by side each open on three sides, sometimes known as a semi-detached house;
- (iii) row or terrace - a one-family or two-family house in a row of three or more attached houses with common or adjacent walls;
- (iv) apartment or flat - an apartment or flat is (a) a residential structure containing three or more dwelling units, or (b) a structure used for business purposes which contains one or more dwelling units (e.g., living quarters in an office building or factory, living quarters over a store, etc.).

A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. The number of dwelling units in a structure will be the number of households the structure is intended to accommodate.

For the purpose of this survey, a farm must contain (a) three acres or more or (b) from one to three acres and have a yearly agricultural production of at least \$250 including produce used for home consumption. This definition was introduced concurrently with a changeover to a new sample design which took place over a period from late 1953 to early 1955. While formerly a farm was defined as containing at least one acre and having a yearly agricultural production of \$50 or more, it is considered that, for classification of new dwellings, there is actually little difference between the old and new definitions.

Reliability of the Estimates

Since the estimates in this report are based in part on a sample survey, they are subject to sampling variability. This sampling variability is not present in the data on municipalities of 5,000 population and over. For estimates derived from the sample survey, the relative sampling error increases as the size of the estimate decreases. Care should be taken, therefore, in interpreting the precision of the estimates. The estimate of unfinished dwellings for the whole of Canada should be within 5 per cent of the figures which would have been obtained from a complete count.

In addition to sampling variance, all of the estimates are subject to errors of enumeration. As the survey, for the most part, can be carried out without interview, there is little error attributable to response difficulties. However, due to the method of enumeration in the sample areas, some dwellings begun in the preceding months are not reported as starts until the June and October surveys. On the basis of such delayed reports made in June 1958, the originally published figure for starts, January 1 to May 31, 1958, has been revised from 48,621 to 51,956. Another revision of starts which will cover the period June 1 to October 30, 1958, will be made in the October 1958 report. Similar revisions have been made each year since 1955 and figures for these years shown for comparative purposes in Tables 1, 2 or 5 are on the revised basis.

The estimates presented in the tables are shown to the last digit instead of being rounded, not because they are assumed to be accurate to the last digit, but rather for convenience in summation and economy in processing the tabulations.

Metropolitan Areas

Some cities in Canada have reasonably well-defined suburban areas and the largest of these have been included in Table 3 under the name of the principal city. Data for the individual components of these Metropolitan Areas are given in Table 4; the whole of these areas are included in the "Urban, 5,000 or more" category in Table 2.

The Metropolitan Areas set up for the 1951 Census have been used from 1952 to 1955. Boundary alterations made for the 1956 Census in the Metropolitan Areas of Calgary, Edmonton, Hamilton, London, Ottawa-Hull, St. John's (Nfld.), Vancouver, and Windsor, have been incorporated as of January 1, 1956, in the delineation of these areas for this survey. With the exceptions of Ottawa-Hull and Vancouver, the changes in boundaries have little effect on the volume of residential construction reported for these Metropolitan Areas. In the case of Ottawa-Hull, the addition of Nepean Township resulted in an increase of somewhat under 8 per cent in dwellings under construction at January 1, 1956, and for Vancouver, the addition of Delta District Municipality and the part of Surrey District Municipality formerly excluded from the Metropolitan Area resulted in an increase of a little over 8 per cent in dwellings under construction at January 1, 1956. While the net change in the total Metropolitan Area of St. John's, Nfld., was quite small, the subdivision of the suburban portion was changed entirely and for the individual sections no comparison of 1956 data with previous years is possible.

Other Major Urban Areas

In addition to the Metropolitan Areas, other large urban centres also have suburban areas. Data for these other major urban areas are given in Appendix A. It should be noted that in Table 2, the suburban areas in these cases are included in the category to which they belong individually, which could be any one of the rural-urban classifications.
