NEW RESIDENTIAL CONSTRUCTION

October, 1959

(Urban centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of a nationwide survey, the field work for which is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban centres of 5,000 population and over, as well as other areas of high building activity, are enumerated completely. The remainder of the country is covered on a sample basis.

Beginning with January 1959, only the reports for March, June, September and December will contain statistics referring to all areas. The tables in the reports for these months containing data for all areas are numbered Q-1 to Q-6, inclusive. In the remaining months, statistics are available only for the urban centres of 5,000 population and over (including the Metropolitan Areas of the larger cities). Tables containing data for these centres only are identified as M-1 to M-10 and Appendix A and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, these monthly tables follow the quarterly tables.

The reasons for this change in coverage are discussed in the section following.

Change in Coverage

Until January 1, 1959, the coverage of areas outside the urban centres of 5,000 population and over was made through a sample survey carried out in conjunction with the monthly Labour Force Survey. This arrangement was subject to two important disadvantages: (1) the sample used had been designed for population surveys and not for a survey of new dwellings; in consequence, there was a high sampling variability attached to the estimates; (2) the full areas of the sample segments were covered only twice a year - at the end of June and at the end of October; in the intervening months coverage was limited to those parts of the segment areas visited in the course of interviewing for the Labour Force Survey. This resulted in delay in the reporting of many starts in the sample areas until the end of June or October and necessitated revision of the estimates for the previous months at these times (see second paragraph of "Reliability of Estimates", page 4 of the December 1958 report).

To reduce sampling variability, a new sample was designed specifically for this survey and was introduced at the beginning of 1959. The field work for this sample is being carried out through the field organization of Central Mortgage and Housing

Corporation. The cost of covering the sample areas monthly would be prohibitive and it was decided, therefore, to carry out a full survey in the sample areas four times a year - at the end of March, June, September and December. From the beginning of 1959, consequently, estimates of construction of new dwellings for the whole country will be available only on a quarterly basis. However, these quarterly estimates should be more reliable than the estimates for previous years since they will be subject to lower sampling error and to more accurate reporting of the period when dwellings were started. Monthly reporting for the urban centres of 5,000 population and over will be continued and data on housing construction for these areas will be published monthly as in the past.

Adjustments

A column headed "Adjustments" appears in Table M-1. These adjustments can arise in various ways. For example, after a start on a dwelling has been made construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Definitions

The count of dwellings which are started, completed, and under construction includes only new residential construction intended for year-round occupancy. Seasonal dwellings such as summer cottages, ski shacks, etc., are not counted. Dwellings which are occupied even if unfinished are regarded as completed for the purposes of this survey.

Types of dwelling:

- (i) 1-family detached - a one family house open on all four sides, i.e., not joined to other buildings;
- (ii) 2-family detached - a two-family house which contains only two dwelling units, either one above the other open on all four sides, or two units side by side each open on three sides, sometimes known as a semi-detached house;
- (iii) row or terrace - a one-family or two-family house in a row of three or more attached houses with common or adjacent walls:

- (iv) apartment or flat - an apartment or flat is (a) a residential structure containing three or more dwelling units, or (b) a structure used for business purposes which contains one or more dwelling units (e.g., living quarters in an office building or factory, living quarters over a store, etc.).

A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. The number of dwelling units in a structure will be the number of households the structure is intended to accommodate.

Metropolitan Areas

Some cities in Canada have reasonably well-defined suburban areas and the largest of these have been included in Table M-2 under the name of the principal city. Data for the individual components of these Metropolitan Areas are given in Table M-3.

The Metropolitan Areas set up for the 1951 Census have been used from 1952 to 1955. Boundary alterations made for the 1956 Census in the Metropolitan Areas of Calgary, Edmonton, Hamilton, London, Ottawa-Hull, St. John's (Nfld.), Vancouver, and Windsor, have been incorporated as of January 1, 1956, in the delineation of these areas for this survey. With the exceptions of Ottawa-Hull and Vancouver, the changes in boundaries had little effect on the volume of residential construction reported for these Metropolitan Areas. In the case of Ottawa-Hull, the addition of Nepean Township resulted in an increase of somewhat under 8 per cent in dwellings under construction at January 1, 1956, and for Vancouver, the addition of Delta District Municipality and the part of Surrey District Municipality formerly excluded from the Metropolitan Area resulted in an increase of a little over 8 per cent in dwellings under construction at January 1, 1956. While the net change in the total Metropolitan Area of St. John's, Nfld., was quite small, the subdivision of the suburban portion was changed entirely and for the individual sections no comparison of 1956 data with previous years is possible.

Other Major Urban Areas

In addition to the Metropolitan Areas, other large urban centres also have suburban areas. Data for these other major urban areas are given in Appendix A. It should be noted that in Table M-2, the urban components of these areas having populations of 5,000 and over are listed individually and that the remaining municipalities are excluded from any tables or totals referring to urban centres of 5,000 population and over.
