NEW RESIDENTIAL CONSTRUCTION

December, 1961

Introduction

The statistics contained in this report are the results of a nationwide survey, the field work for which is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and urban centres of 5,000 population and over, as well as other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas are numbered Q-1 to Q-6, inclusive. In the remaining months, statistics are available only for the urban centres of 5,000 population and over (including the Metropolitan Areas of the larger cities). Tables containing data for these centres only are identified as M-1 to M-10 and Appendix A and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, these monthly tables follow the quarterly tables.

Adjustments

A column headed "Adjustments" appears in Tables Q-1 and M-1. These adjustments can arise in various ways. For example, after a start on a dwelling has been made construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Definitions

The count of dwellings which are started, completed, and under construction includes only new residential construction intended for year-round occupancy. Seasonal dwellings such as summer cottages, ski shacks, etc., are not counted. Dwellings which are occupied even if unfinished are regarded as completed for the purposes of this survey.

Types of dwelling:

- (i) 1-family detached - a one family house open on all four sides, i.e., not joined to other buildings;
- (ii) 2-family detached - a two-family house which contains only two dwelling units, either one above the other open on all four sides, or two units side by side each open on three sides, sometimes known as a semi-detached house;
- (iii) row or terrace - a one-family or two-family house in a row of three or more attached houses with common or adjacent walls;

- (iv) Apartment or flat - an apartment or flat is (a) a dwelling in a residential structure containing three or more dwelling units, or (b) a dwelling in a structure used for business purposes which contains one or more dwelling units (e.g., living quarters, in an office building or factory, living quarters over a store, etc.).

A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. The number of dwelling units in a structure will be the number of households the structure is intended to accommodate.

For the purpose of this survey, a farm must contain (a) three acres or more or (b) from one to three acres and have a yearly agricultural production of at least \$250 including produce used for home consumption. This definition was introduced concurrently with a changeover to a new sample design which took place over a period from late 1953 to early 1955. While formerly a farm was defined as containing at least one acre and having a yearly agricultural production of \$50 or more, it is considered that, for classification of new dwellings, there is actually little difference between the old and new definitions.

Reliability of the Estimates

Since the statistics in the tables identified by the prefix "Q" are based in part on a sample survey, they are subject to sampling variability. This sampling variability is not present in the data on urban centres of 5,000 population and over. For estimates derived from the sample survey, the relative sampling error increases as the size of the estimates decreases. Care should be taken, therefore, in interpreting the precision of some of the estimates. At April 1, 1959, an entirely new sample design was brought into use. Comparisons of data for the second quarter of 1959, or later, with data referring to the first quarter of 1959, or earlier, therefore are subject to a greater range of sampling error than comparisons of data referring entirely to periods before April 1, 1959, or entirely to periods after April 1, 1959.

In addition to sampling variability, all of the estimates are subject to errors of enumeration. As the survey, for the most part, can be carried out without interview, there is little error attributable to response difficulties. However, on the introduction of the new sample areas in 1959, difficulty was experienced in obtaining a full count of dwellings under construction. This resulted in subsequent under-reporting of completions of new dwelling units. As mentioned in the December 1959 issue of this report, adjustments have been made to the originally published estimates of completions for the second and third quarters of 1959 and to the estimates of dwellings under construction at January 1, March 31, June 30 and September 30, 1959.

The estimates presented in the tables are shown to the last digit instead of being rounded, not because they are assumed to be accurate to the last digit, but rather for convenience in summation and economy in processing the tabulations.

Metropolitan Areas

Some cities in Canada have reasonably well-defined suburban areas and the largest of these have been included in Table M-2 under the name of the principal city. Data for the individual components of these Metropolitan Areas are given in Table M-3.

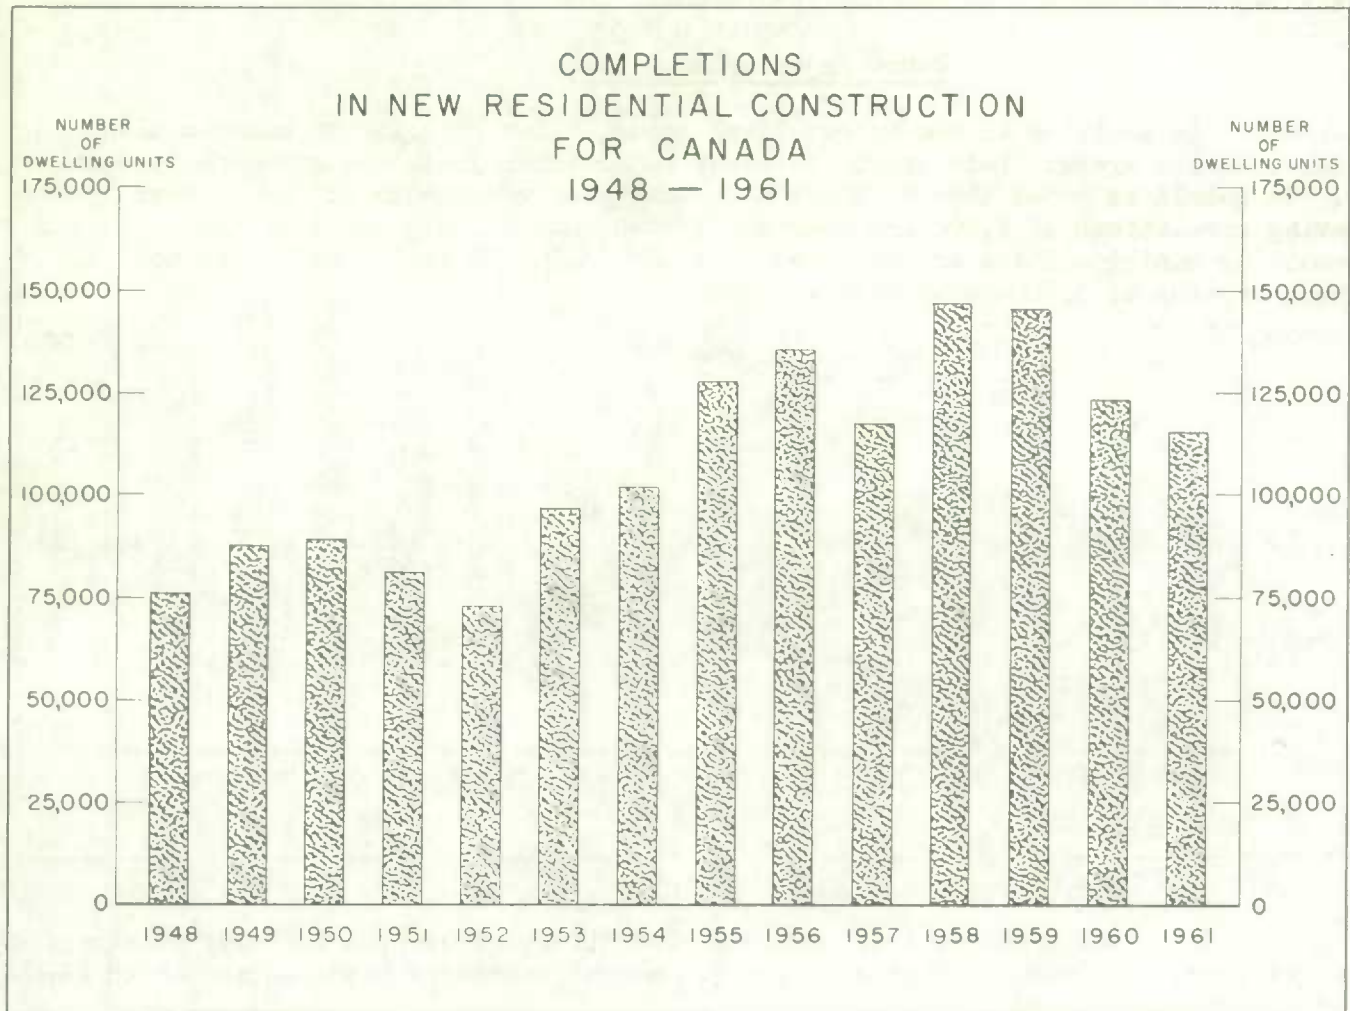

Since January 1, 1956, the Metropolitan Areas used are those set up for the 1956 Census. From 1952 to 1955 the 1951 Census Metropolitan Areas were used. The composition of the Metropolitan Areas in use prior to 1952 is detailed in Appendix 3 of the May 1951 report.

Other Major Urban Areas

In addition to the Metropolitan Areas, other large urban centres also have suburban areas. Data for these other major urban areas are given in Appendix A. It should be noted that in Table M-2, the urban components of these areas having populations of 5,000 and over are listed individually and that the remaining municipalities are excluded from any tables or totals referring to urban centres of 5,000 population and over.

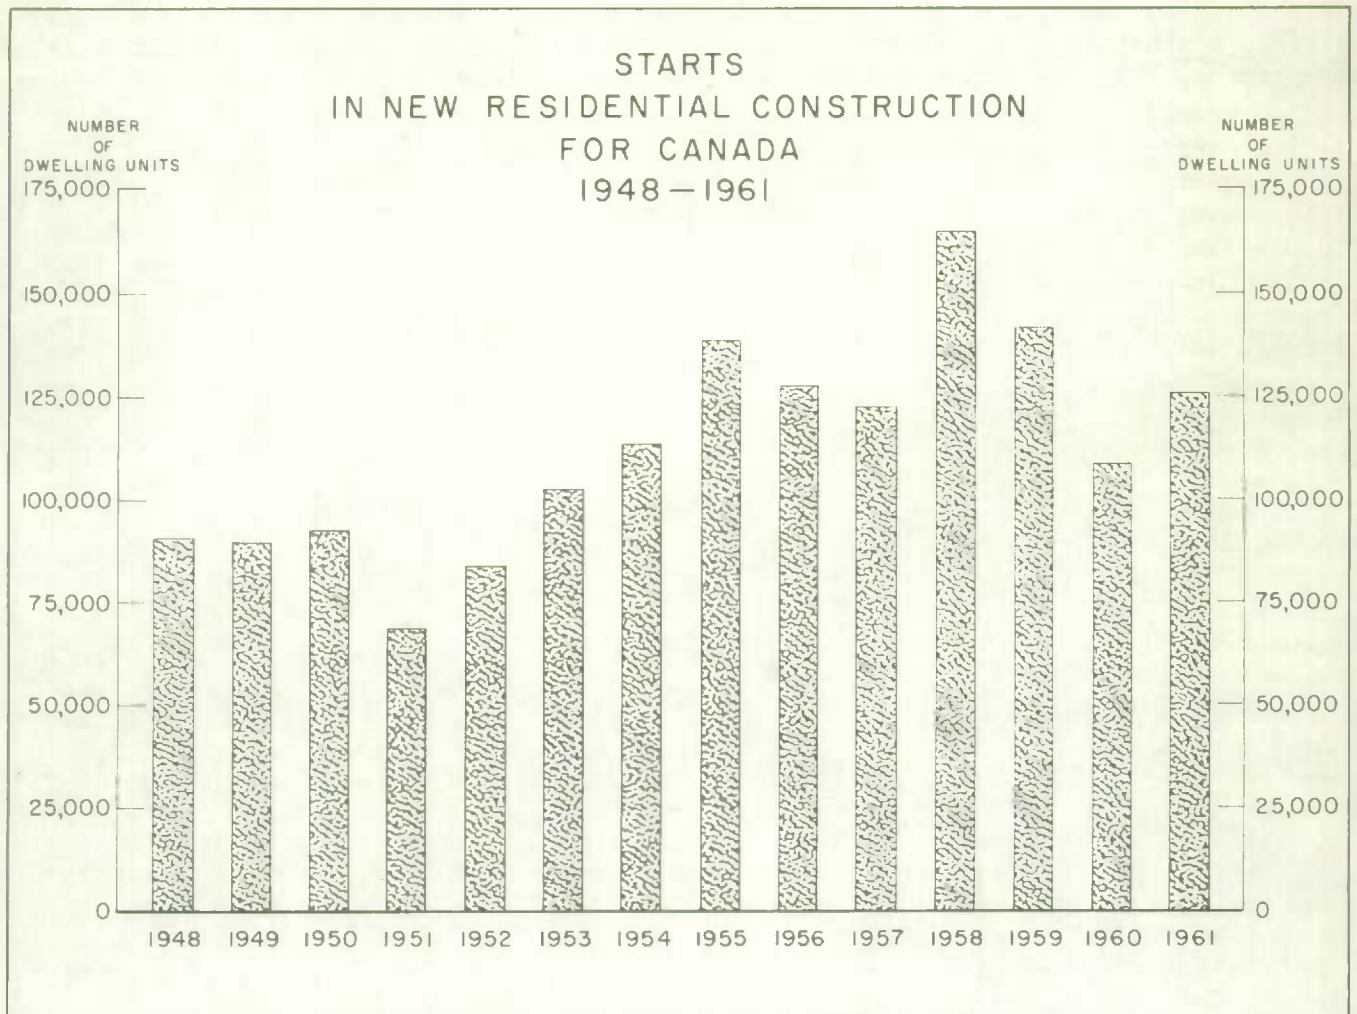

Summary

Starts of new dwelling units in 1961 numbered 125,577, an increase of 16,719 from the 1960 figure of 108,858. Completions of new dwelling units in 1961, at 115,608, were 8,149 units under the 1960 total of 123,757. Including dwelling units added by conversion of existing structures, completions totalled 118,440 units in 1961, against 126,305 units in 1960. There were 73,583 units under construction at December 31, 1961, as compared with 65,773 a year earlier.

Starts in 1961 were higher than in the previous year in most regions. There were year-to-year increases of 32 per cent in the Prairies, 20 per cent in Quebec, 14 per cent in Ontario and 9 per cent in the Maritimes. In Newfoundland and British Columbia starts decreased somewhat over the year. Except in the Maritimes and Quebec where there were small increases, completions were down from 1960. Decreases in completions were relatively largest in Newfoundland and British Columbia which showed declines of 29 per cent and 19 per cent, respectively, over the year.

Of the new dwellings started in 1961, 76,430 or 61 per cent were one-family detached and 35,633 or 28 per cent were apartments or flats. One-family detached dwellings numbered 76,171 or 66 per cent of 1961 completions and apartments or flats accounted for 26,825 or 23 per cent.

For urban centres of 5,000 population and over, time under construction of dwellings completed in 1961 averaged 6.3 months, compared with 7.0 months in 1960 and 6.4 months in 1959.
