## HoUSING BULLetin No. 17

During the month of May, an estimated 7,374 dwelling units were completed in Canada. First the number of dwelling units completed during the first five months was estimated at 32,451 . This was $32 ;$ higher than in the first five months of 1948. A higher level of building activity is indicated by the estimated number of dwelling units started during the morth of liay. Construction was begun on an estimated 12,809 dwelling units in way, an increase of $12 \%$ over May of last year.

A breakdown of the types of dwellings com leted shows that approximately $29 \%$ are for rental purposes and the remainder are owner-occupied. There has been no change in this figure since last month.

The average length of time required to build houses completed in bay vas E. 0 months. The increase from 7.9 months in April is not simnificant. l'he length of time under construction was hichest in British Columbia where 9.7 months was recordod.

These estimates, as well as other statistics contained in this bulletin, are the results of a nation-wide survey carried out each month by the Dominion Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. Ill metropolitan areas and urban contres with a population of 5,000 or more are enumerated completely Approximatoly 400 samule areas lying outside these municipalities are also chosen for com; lete enumeration.

In some of the tables, there aprears a column headed "adjustments." These adjustments can ariso in various ways. ror example, after a start on a awelling has been made, construction may cease, or a structure when completed may contain more or less dwelling units than were reported when construction cormenced.

## - 14 - <br> Appendi: 1 : Definitions

(a)

The count of dwellings which are started, completed and under construction includer only new residential construction intended for year-round occupancy. Seasonal dwellings such as sumner cottages, ski shacks, etco, are not counted. Dwellings which are occupied, even if unfinished, are regarded as completed for the purposes of this survey.
(b) Type of dvelling
(i) 1-family detached:
a one-family house open on all four sides, i.e., not joined to other buildings:
(ii) 2-family detached:
(ili) row or tgrazas:
(iv) epartment or fllat:
(v) other:
a two-family house which contains only two dwelling undts, either one above the other open on all four sides, or two units side by side each open on three sides, sometimes known as a semi-detached house;
a one-family or two-family house in a row of three or more attached houses with common or adjacent walls;
an apartment or flat is (a) a residential structure conteining three or more dwelling units, or (b) a structure used for business purposes wich contains one or more dwelling units (eogo. living quarters in an office building ar factory, Ilfig quarters over a store, etc.); and
any trpe of dwelling which does not fell into one of the ahove classifications.
(c)

For the purpose of this survey, a dvelling unit is defined as the living quarters occupied by one household $c \pi$ famin. The number of dwelling units in a structure will be the number ar $h$ weyn is the structure is intended to accomodate.
(d)

For the purpoae of th? Earyey, a farm zust contain at least one acre and must yield agricultural produce ralued at $\$ 50$ or more per year.

> Apperal : Reliability of the estimates

Since the estimateo in this report are partially based on a sample survey, they are subject to sampilus aritbliftj. This sampling variability is not present in the data on the municipalities of 5,000 and over. When the estimates include an element derived from the sample survey, the sampling error increases as the size of the estimate decreases. Care should be taken, therefore, in interpreting the precision of some of the estimates. The estimate of unfinished dwellings for the whole of canada should be within 5 per cent of the figure which would have been obtained from a complete count.

The estimates presented in the tables are shown to the last digit instead of being rounded, not because they are assumed to be accurate to the last digit, but rather for convenience in summation and economy in processing the tabulations.

In addition to sampling varlation, all the estimates are subject to errore of enumeration. However, these should be very small as the survey for the most part can be carried on without interview with a consequent elimination of all types of respondent crror. A complete count by the same enumerators would contain the same enumerative error.

## Appendix 3 : Metropolitan areas

Some cities in Carada have reasonably well-defined suburban areas which, for the purposes of the survey of starts and completions of dwelling units, have beon included undor the name of the principal city. A list of the municipalitios included in these metropolitan areas is given in Housing Bullotin No. 12 pp . 17-19.

## Appendix 4 : Index of residential rents

Since November, 1947, the Dominion Bureau of Statistics has been collecting data on monoy rents from a sample of households in conjunction with the quarterly labour force survey. The aggregate rent paid by a group of households in a given nonth is compared with the aggregate rent paid by the samo group for the same living quarters in the next month. With a matched sample such as this, variations due to changos in the sample and to non-response are oliminatod, and the index is a reliable measure of the change in ront paid for the same accomodation. Ront reported is the cash rent paid in all cases receardlass of minor changes in the services provided.

Index of non-farm residential rents in Canada, by region
(October, $2947=100$ )
