Special Surveys Division
OTTAWA

Published by Authority of the Rt. Hon. C. D. Howe, Minister of Trade and Commerce

NEW RESIDENTIAL CONSTRUCTION
January 1 to February 29, 1952

Vol. 5 - No. 2

Price \$2.00 per annum.

Introduction

The statistics contained in this report are the results of a nationwide survey carried out each month by the Dominion Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and urban centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

Beginning with January, 1952, the 100% coverage by the Central Mortgage and Housing Corporation was extended to those urban centres which had reached populations of 5,000 or more according to the 1951 Census. These places can be identified in Table 3 by the absence of 1951 figures. In addition, the boundaries of the metropolitan areas have been altered to agree with 1951 Census metropolitan areas. Since the distribution among the urban and rural categories has changed, 1952 figures only are shown in Table 2.

A column headed "Adjustments" appears in Tables 1, 2 and 4. These adjustments can arise in various ways. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Definitions

The count of dwellings which are started, completed, and under construction includes only new residential construction intended for year-round occupancy. Seasonal dwellings such as summer cottages, ski shacks, etc., are not counted. Dwellings which are occupied, even if unfinished, are regarded as completed for the purposes of this survey.

Types of dwelling:

- (i) 1-family detached - a one-family house open on all four sides, i.e., not joined to other buildings;
- (ii) 2-family detached - a two-family house which contains only two dwelling units, either one above the other open on all four sides, or two units side by side each open on three sides, sometimes known as a semi-detached house;

- (iii) row or terrace — a one-family or two-family house in a row of three or more attached houses with common or adjacent walls;
- (iv) apartment or flat — an apartment or flat is (a) a residential structure containing three or more dwelling units, or (b) a structure used for business purposes which contains one or more dwelling units (e.g., living quarters in an office building or factory, living quarters over a store, etc.);
- (v) other — any type of dwelling which does not fall into one of the above classifications.

For the purpose of this survey, a dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. The number of dwelling units in a structure will be the number of households the structure is intended to accommodate.

For the purpose of this survey, a farm must contain at least one acre and must yield agricultural produce valued at \$50. or more per year.

Reliability of the estimates

Since the estimates in this report are partially based on a sample survey, they are subject to sampling variability. This sampling variability is not present in the data on the municipalities of 5,000 and over. When the estimates include an element derived from the sample survey, the sampling error increases as the size of the estimate decreases. Care should be taken, therefore, in interpreting the precision of some of the estimates. The estimate of unfinished dwellings for the whole of Canada should be within 5 per cent of the figures which would have been obtained from a complete count.

The estimates presented in the tables are shown to the last digit instead of being rounded, not because they are assumed to be accurate to the last digit, but rather for convenience in summation and economy in processing the tabulations.

In addition to sampling variance, all the estimates are subject to errors of enumeration. However, these should be very small as the survey for the most part can be carried on without interview with a consequent elimination of all types of respondent error. A complete count by the same enumerators would contain the same enumerative error.

Metropolitan areas

Some cities in Canada have reasonably well-defined suburban areas which, for the purposes of the survey of new residential construction, have been included under the name of the principal city. As mentioned in the Introduction, the boundaries of these metropolitan areas have been altered to coincide with those set up for the 1951 Census. Data for the individual components of these areas are given in Table 4, which appears in this report for the first time.
