EXPLANATORY NOTESNOTES EXPLICATIVES

The figure "2" after the name of the municipality indicates that the report was not received from the municipality in time for publication. If the figure "2" is not present and all columns are blank, it indicates that a "nil" report was received or that the value of permits issued during the month was less than \$500.

The asterisk before the name of a municipality indicates that it is not an urban centre of 10,000 population or over situated outside a Metropolitan or a Major Urban area.

La présence du chiffre "2" après le nom d'une municipalité indique que le Bureau n'a pas reçu le rapport de cette municipalité à temps. Si le chiffre "2" ne figure pas et que les colonnes sont toutes laissées en blanc, c'est que le Bureau a reçu un rapport marqué "néant" ou que la valeur des permis délivrés durant le mois en cause était inférieure à \$500.

La présence de l'astérisque avant le nom d'une municipalité indique qu'il ne s'agit pas d'une agglomération urbaine de 10,000 habitants ou plus située à l'extérieur d'une zone métropolitaine ou d'une grande agglomération urbaine.

The Dominion Bureau of Statistics conducts a monthly survey of building permits issued in Canada. The material contained in this publication is compiled from data supplied by the issuing municipalities and therefore, varies from municipality to municipality with the terms of each individual by-law, with the methods of estimating the value of construction for permit issuing purposes and with the diligence with which the terms of the by-law are applied. Information is not available on the permits allowed to lapse without the work for which the permit was issued being completed.

This publication presents statistics on building permits issued during the month for each municipality reporting in the survey. Totals are available for metropolitan areas, for economic regions in certain provinces, for provinces and finally for the country as a whole. The municipalities are listed individually showing building permits issued according to the following classifications:

1. Residential:

- (a) Number of dwelling units created for single dwellings, double dwellings, apartments, conversions of existing structures into new dwelling units and total number of dwelling units.
- (b) Value of building permits issued for new residential construction and repair.

2. Non-Residential:

Value of building permits issued for new and repair construction for: industrial, commercial, institutional and government construction.

Area totals are the sum of the reporting municipalities and there is no allowance for municipalities not covered in the survey and for municipalities issuing permits but not reporting in the survey for the month in question. In some cases, reports from municipalities are received too late to be included in the revealing compilation; these municipalities are listed in the publication of the following month and a revised summary of building permits by province and for Canada as a whole is made available in that month.

Le Bureau fédéral de la statistique effectue chaque mois un relevé des permis de bâtir délivrés au Canada. Les renseignements contenus dans la présente publication proviennent des données transmises par les municipalités qui délivrent des permis; la statistique varie donc d'une municipalité à l'autre selon le règlement propre à chacune, selon les méthodes d'estimation des valeurs de construction appliquées aux fins de la délivrance des permis et selon la diligence avec laquelle les règlements eux-mêmes sont mis à exécution. On ne dispose d'aucun renseignement au sujet des permis pouvant déchoir sans que le travail prévu ait été exécuté.

La présente publication fournit la statistique des permis de bâtir délivrés au cours du mois par chaque municipalité participant à l'enquête. Des totaux figurent dans le cas des zones métropolitaines, des régions économiques de certaines provinces, des provinces elles-mêmes, et pour le Canada entier. Les municipalités sont énumérées individuellement, en regard des permis de bâtir répartis d'après la classification suivante:

1. Construction domiciliaire:

- (a) Nombre de logements créés sous forme de maisons simples, de maisons doubles, de maisons d'appartements et de transformations de bâtiments en nouveaux logements, et nombre total d'unités de logement.
- (b) Valeur des permis de bâtir délivrés à l'égard de travaux neufs de construction et de réparation domiciliaires.

2. Construction non domiciliaire:

Valeur des permis de bâtir délivrés à l'égard de travaux neufs de construction et de réparation de bâtiments destinés à des fins industrielles, commerciales et institutionnelles ou gouvernementales.

Les totaux régionaux représentent la somme des chiffres fournis par les municipalités faisant rapport; ils ne tiennent pas compte des municipalités non comprises dans l'enquête, ni des municipalités qui délivrent des permis mais qui n'ont pas fait rapport pour le mois en cause. Dans certains cas, les rapports de la municipalité parviennent au Bureau trop tard pour qu'on puisse les inclure dans le calcul pertinent; en pareil cas, les données figurent dans la publication du mois suivant, et l'on fournit, ce mois-là, un sommaire revisé des permis de bâtir, par province et pour le Canada entier.

DEFINITIONSResidential:

Includes only self-contained housing units and, therefore, excludes such structures as barracks and dormitories.

Number of units shown under Residential housing indicates the number of self-contained dwelling units added. For example, if an apartment building is constructed and contains 6 apartments, it will be shown as 6 dwelling units. When an existing structure is converted into additional housing units, the number of units added is included. The values of the permits issued for such conversions are included with new residential construction.

Apartments include all multiple housing with 3 or more units such as triplexes, rows and terraces, as well as apartments. Flats, regardless of number, that are part of a non-residential structure are also included.

Single residential units includes only one unit dwellings.

Double residential units includes all two unit dwellings such as doubles and duplexes.

Conversions include number of dwelling units added by conversions of existing structures.

New Residential Construction includes the value of building permits issued for entirely new residential work including detached and attached garages. The values of conversion and addition permits are also included in this group.

Repair Residential Construction includes permits issued for major alterations, improvements, and smaller types of repair.

This definition of repair is at variance with that used in Construction in Canada(1) and Private and Public Investment Outlook(2) which classify major alterations and improvements as new construction and only those expenditures which return the structure to its previous state, such as painting and pointing

DEFINITIONSConstruction domiciliaire:

Ne comprend que les logements indépendants, à l'exclusion de bâtiments tels que casernes et dortoirs.

Nombre d'unités, qui figure sous la rubrique Construction domiciliaire, correspond au nombre d'unités de logement indépendantes ajoutées. Par exemple, une nouvelle maison d'appartements de six logements comptera pour six unités de logement. Dans le cas de transformation de bâtiments en unités de logement additionnelles, on tient compte du nombre de nouvelles unités créées. La valeur des permis délivrés à l'égard de pareilles transformations est incluse dans la valeur des constructions domiciliaires nouvelles.

Maison d'appartements comprend toute maison à logements multiples de trois unités ou plus, notamment les triplex, les rangées de maisons et les maisons d'appartements proprement dites. Quel qu'en soit le nombre, les plain-pied qui font partie d'une construction non domiciliaire sont également comptés.

Maison simple s'entend des habitations à logement unique

Maison double s'entend de toute habitation à deux logements, par exemple les maisons jumelées et les duplex.

Transformation comprend le nombre de logements ajoutés par suite de la transformation d'un bâtiment déjà existant.

Construction domiciliaire neuve englobe la valeur des permis de bâtir délivrés à l'égard de travaux de construction entièrement neufs, y compris les garages attenants et non attenants. La valeur des permis de transformation et de rajout figure également dans cette catégorie.

Travaux de réparation domiciliaires comprend les permis délivrés à l'égard des travaux de modification ou d'amélioration importants et des réparations de moindre importance.

Cette définition des travaux de réparation diffère de la définition employée dans Construction in Canada(1) et dans Perspectives des investissements privés et publics(2) qui classent les modifications et améliorations comme constructions neuves et ne considèrent comme réparations que les travaux destinés à

of brick work, as repair. When this latter category of activity is covered by a building permit, it is included in the total of repair.

rétablir un bâtiment dans son état initial (travaux de peinture, de rebriquetage, etc.). Lorsque des travaux de cette dernière catégorie sont visés par un permis de bâtir, ils figurent dans le total des réparations.

NATURE OF CLASSIFICATION

This classification is one of buildings or structures for which a building permit was issued by a municipality. A building permit may be issued by municipalities for: construction of new buildings; repairs, alterations, additions or conversions to existing buildings; installations of heating, plumbing and other facilities; erection of signs, posters, canopies, etc., and other improvements to property.

The classification for non-residential buildings or structures is divided into three major groups pertaining to the use of the structures for industrial, commercial and government and institutional purposes. These major groups are further sub-divided into principal categories of each major group.

1. Industrial - Includes buildings used for: manufacturing and processing; transportation, communication and other utilities and agriculture, forestry, mine and mine mill buildings.
2. Commercial - Includes stores, warehouses, garages, office buildings, theatres, hotels, funeral parlours, beauty salons and miscellaneous commercial - signs, posters, heating and plumbing installations, etc.
3. Institutional and Government - Includes expenditures made by the community, public and government for buildings and structures - schools, universities, hospitals, clinics, churches, homes for the aged, blind, deaf and dumb, government office and administration buildings, law enforcement, public protection, national defence, and ancillary buildings such as dormitories, residences, church rectories, gymnasiums, heating plants, laundries and cafeterias for hospitals, schools or universities.

NATURE DE LA CLASSIFICATION

La classification utilisée dans la présente publication porte sur les immeubles ou bâtiments à l'égard desquels la municipalité a délivré un permis de bâtir. Une municipalité peut délivrer un permis de bâtir aux fins suivantes: construction de nouveaux bâtiments; travaux de réparation, modifications, rajouts ou transformations; installation d'appareils de chauffage, de plomberie et autres commodités du genre; érection d'enseignes, d'affiches, de marquises, etc., et autres améliorations d'immeubles,

La classification des bâtiments non domiciliaires comporte trois groupes principaux fondés sur les destinations suivantes des immeubles: industrielle, commerciale et institutionnelle ou gouvernementale. Ces groupes se subdivisent à leur tour en catégories principales.

1. Construction industrielle - Comprend tout bâtiment destiné à la fabrication ou à la transformation de produits; au transport, aux communications et autres services d'utilité publique; à l'agriculture, au foretage, à l'exploitation minière, y compris les installations de traitement des minéraux à la mine.
2. Construction commerciale - Comprend les magasins, entrepôts, garages, immeubles de bureaux, théâtres, hôtels, salons funéraires, salons de beauté, ainsi que des installations commerciales diverses - enseignes, affiches, chauffage, plomberie, etc.
3. Construction institutionnelle et gouvernementale - Comprend les dépenses faites par les collectivités, les corps publics et les gouvernements pour la construction d'immeubles ou bâtiments; par exemple, écoles, universités, hôpitaux, cliniques, églises, foyers pour vieillards, pour aveugles, pour sourds et muets; bureaux de gouvernement ou d'administration publique, services d'application de la loi, de protection du public, de défense nationale; enfin des bâtiments auxiliaires tels que dortoirs, résidences d'employés de service, presbytères, gymnasiums, chaufferies, buanderies et cafétérias d'hôpitaux, d'écoles ou d'universités.

BASIS FOR CLASSIFICATION

Classification of structures into major groups and sub-groups is dependent upon: the intended use of the structure in case of new buildings; the present or intended use of the building to which repairs and other improvements are being made; affiliation of the structure where the proposed structure is to provide ancillary facilities to the existing buildings; the principal use of the building where the intended use of the building is for more than one purpose.

On the building permit forms, the municipality reports; name and address of applicant (owner or agent); location of construction; intended use of the buildings - factory, school, church, etc.; class of work-done - new, repair, etc.; the value of the proposed construction; and in case of residential construction, number of dwelling units created.

The description given as to the intended use of the building, forms the basis for classification. If the structure is a new building or conversion it is classified according to its intended use such as a factory, school, church, hospital, etc. Where the expenditure is of a repair nature, including all improvements to the property, alterations and additions, it may be classified as to the present use of the building, to which repairs are made or its intended use. If the repair construction consists of installation of heating, plumbing or other such facilities, it will be classified as to the present use of the building. Where it includes an addition, such as a warehouse, to a store, it will be classified to its intended use.

Where the new or repair construction for institutional and government purposes provides additional facilities for existing buildings, these are classified according to the intended use of the existing structures. Examples are heating plants, cafeterias, nurses' residence for hospitals; dormitories, gymnasiums, libraries for universities; ancillary structures on prison farms, on Navy, Army and Air Force bases, etc.

A structure may have more than one intended use and therefore fall into more than one classification, and may be classified as to the principal use of the structure, or the value of proposed construction may be divided into more than one appropriate category. Where part of

FONDEMENT DE LA CLASSIFICATION

La classification des bâtiments en groupes et sous-groupes principaux se fondent sur les éléments ci-après: la destination prévue, dans le cas des immeubles nouveaux; l'utilisation réelle ou prévue des bâtiments auxquels des réparations ou améliorations sont effectuées; affiliation de l'immeuble où la construction envisagée a pour objet d'assurer des commodités accessoires; la principale utilisation de l'immeuble où la construction projetée est destinée à plus d'une fin.

Sur la formule de déclaration des permis de bâtir, la municipalité inscrit: les nom et adresse du requérant (propriétaire ou agent); l'emplacement de la construction; la destination de l'immeuble - manufacture, école, église, etc.; la catégorie de travaux en cause - construction nouvelle, réparation, etc.; la valeur de la construction projetée et, dans le cas des constructions domiciliaires, le nombre d'unités de logement créé.

La description fournie relativement à l'utilisation éventuelle de l'immeuble constitue le fondement de la classification. S'il s'agit d'un nouveau bâtiment ou d'une transformation, l'ouvrage est classé selon sa destination - manufacture, école, église, hôpital, etc. Lorsque la dépense a pour objet des travaux de réparation, y compris toutes améliorations de propriété, modifications et rajouts, son classement peut s'effectuer en fonction de l'emploi que l'on fait déjà du bâtiment existant ou de la fin à laquelle on le destine. Si les travaux consistent en l'installation d'un système de chauffage, de plomberie ou d'autres commodités du genre, on les classe selon la fin à laquelle le bâtiment sert déjà. Lorsque les travaux comprennent un rajout, par exemple l'addition d'un entrepôt à un magasin, le classement se fait d'après l'utilisation projetée.

Dans le cas où les travaux neufs de construction ou de réparation effectués à des fins institutionnelles ou gouvernementales doivent assurer des commodités supplémentaires à des bâtiments existants, ces travaux sont classés d'après l'usage que l'on se propose de faire de l'immeuble existant. Voici des exemples pertinents: chaufferies, cafétérias, résidences d'infirmières pour hôpitaux; dortoirs, gymnases, bibliothèques d'universités; constructions auxiliaires dans des fermes-prisons ou dans des bases de la Marine, de l'Armée, de l'Aviation, etc.

Étant donné qu'une même construction peut être destinée à des fins multiples, elle peut rentrer dans plus d'une classe; il est possible, en effet, de classer pareille construction d'après sa destination principale, ou de répartir la valeur des travaux entre diverses catégories.

the structure is to provide additional facilities, whose value in relation to the principal use of the structure is relatively small, it will be classified as to its principal use. If the structure is a store and apartment, store and office building, restaurant and office building, etc., the value of the proposed construction may be divided among the appropriate classifications. However, where the principal use of the structure is a shopping centre but provides additional facilities such as banks, restaurants, etc., it will be classified as stores - the principal use of the structure.

ries appropriées. Si une partie de l'immeuble a pour objet d'assurer des commodités supplémentaires dont la valeur, par rapport à l'utilisation principale du dit immeuble, se révèle passablement faible, les travaux seront classés en fonction du principal usage de l'immeuble lui-même. S'il s'agit d'un bâtiment formé d'un magasin et d'un appartement, d'un magasin et de bureaux, d'un restaurant et de bureaux, etc., la valeur de la construction projetée peut être répartie entre les diverses catégories appropriées. Cependant, si une construction sert surtout de centre commercial tout en offrant des services supplémentaires (banques, restaurants, etc.), on la classe parmi les magasins, ce qui correspond en l'occurrence au principal emploi de ladite construction.

COVERAGE

The coverage of the Building Permit Survey can best be expressed in terms of the population of the municipalities covered in the survey compared to the total population. The following table shows data which may be used to approximate the coverage of the survey. As an example for Canada as a whole:

Column 1 - Shows the population of the country in 1961.

Column 2 - Shows the total 1961 population of municipalities issuing building permits.

Column 3 - Shows the total 1961 population of the municipalities reporting in the survey in 1968.

Thus, in 1968, 78.7% of the Canadian population resided in municipalities issuing building permits and 73.6% resided in municipalities reporting in the survey; the proportion of the population of the municipalities reporting in the survey to the population of municipalities issuing building permits was 93.5%.

Prior to 1963 not all municipalities issuing building permits were being requested by D.B.S. to provide information on building permits. However starting in 1963 efforts are made to secure data from all municipalities issuing permits. Thus, the coverage in terms of population may be expected to increase but not materially, the population of the municipalities not reporting in the survey taken as a group being relatively small.

COUVERTURE

La meilleure façon de mesurer la couverture de l'enquête sur les permis de bâtir consiste à comparer le chiffre de la population des municipalités visées au chiffre de la population totale. Le tableau qui suit fournit des données pouvant servir à mesurer de façon approximative la portée de l'enquête. Par exemple, pour ce qui est du Canada entier:

La colonne 1 - Laisse voir le chiffre de la population du pays en 1961.

La colonne 2 - Laisse voir le chiffre global de la population de 1961 des municipalités délivrant des permis de bâtir.

La colonne 3 - Laisse voir le chiffre global de la population de 1961 des municipalités ayant fait rapport en 1968.

Ainsi, en 1968, 78.7 p. 100 de la population du Canada habitaient des municipalités délivrant des permis de bâtir et 73.6 p. 100 habitaient des municipalités soumises à l'enquête; la proportion de la population des municipalités soumises à l'enquête au regard de la population des municipalités délivrant des permis de bâtir s'établissait donc à 93.5 p. 100.

Antérieurement à 1963, les municipalités délivrant des permis de bâtir n'étaient pas toutes tenues de faire rapport au B.F.S. Depuis 1963, toutefois, le Bureau s'efforce d'obtenir des données de toutes les municipalités délivrant des permis. On peut donc s'attendre que la couverture, exprimée en chiffre de population, s'accroisse, mais de peu seulement, vu que la population de l'ensemble des municipalités non soumises à l'enquête est relativement faible.

Although the results of the Building Permit Survey are often used as a leading indicator of building activity they may not be construed as representing the total construction activity in the country. Large projects such as hydro-electric developments, pipelines, highways, do not require a building permit, and frequently large industrial plants are constructed outside the boundaries of a building permit issuing municipality.

For the purpose of approximating coverage in the Building Permits Survey, the breakdown of the population into rural and urban areas in this survey is based on the rural-urban definition shown in the official 1961 census. The urban population in 1961 consisted mainly of the population residing in cities, towns and villages of 1,000 population or more, whether incorporated or not, and the "urbanized" or built-up residential areas surrounding all cities and towns with 10,000 or more persons in the whole agglomeration, i.e. incorporated city or town and urbanized fringe combined. The rest of the population was classified as rural.

Même si les résultats de l'enquête sur les permis de bâtir sont souvent considérés comme un indicateur important de l'activité du bâtiment, on ne saurait estimer qu'ils représentent l'activité globale de la construction au pays. En effet, de vastes entreprises comme l'aménagement d'installations hydro-électriques, de pipelines et de routes ne requièrent pas de permis de bâtir et, bien souvent, de grandes usines se construisent en dehors des limites de toute municipalité délivrant des permis de bâtir.

Afin d'avoir une approximation de la couverture de l'enquête sur les permis de bâtir, la répartition rurale-urbaine de la population, dans la présente enquête, se fonde sur celle qui a été utilisée lors du recensement de 1961. La population urbaine en 1961 comprenait surtout celle des cités, villes et villages de 1,000 habitants et plus, constitués ou non, et des zones "urbanisées" ou bâties à la périphérie de toutes les cités et villes de 10,000 habitants ou plus dans toute l'agglomération, c.-à-d. les cités ou les villes constituées et les banlieues urbanisées réunies. Le reste de la population était classée rurale.

Approximate Coverage of the Building Permit Survey in 1968

(1) Coverage expressed in terms of population of municipalities issuing permits as a percentage of total population -- Couverture exprimée en pourcentage que la population des municipalités délivrant des permis représente par rapport à la population totale.

(2) Coverage expressed in terms of population of municipalities reporting in the survey in 1967 as a percentage of total population -- Couverture exprimée en pourcentage que la population des municipalités ayant fait rapport à l'enquête de 1967 représente par rapport à la population totale.

(3) Coverage expressed in terms of population of municipalities reporting in the survey in 1967 as a percentage of population of municipalities issuing permits -- Couverture exprimée en pourcentage que la population des municipalités ayant fait rapport à l'enquête de 1967 représente par rapport à la population des municipalités délivrant des permis.

BUILDING PERMITS

1968

Annual Summary

The following tables present annual data for building permits issued in more than 1,400 Canadian municipalities during 1968. Data similar to those available in the monthly publication are given for each of these municipalities as well as for metropolitan areas, economic regions in Quebec, Ontario and Manitoba and for the provinces. The level of detail by type of structure is consistent throughout this report except for table 3 which provides much more detail for each of the provinces. In this table, the value of residential construction is shown by type of dwelling for new structures, conversions and major repairs. Non-residential construction is divided into three major groups and further sub-divided into sixteen principal categories pertaining to the intended use of the structure within each major group.

As in 1967, the total value of building permits issued in 1968 showed a considerable overall increase in activity. The 1968 total was \$4.7 billion, up 17% on the 1967 total of \$4.1 billion. Again in residential construction, the emphasis was on apartment building with an increase of 50%. Single dwellings increased by 12%, doubles increased by 8% and major repairs increased by 16%, to give an overall residential increase of 25% on the year. In non-residential construction the value of permits issued also showed an increase of 10% overall, the industrial sector leading with a 25% increase, while the commercial sector increased by 3% and institutional and government construction increased by 10%.

On a provincial basis the increased activity in residential building was general, but the issue of permits for non-residential construction varied within the regions. In the Maritimes, Newfoundland showed massive gains in the industrial and commercial sectors but declined in institutional and government building for a non-residential gain of 17%. A 3% gain in residential construction brings the total increase to 8%. Prince Edward Island declined in non-residential construction by 31% on 1967 but an increase of 42% in residential building reduces the overall decrease in activity to 12%. Nova Scotia shows a decline of 85% in industrial permits issued but commercial values increased by 39%; with an increase in residential building the overall decline is reduced to 6%. New Brunswick also increased notably in the industrial sector as well as a 74% increase in residential permit values for a total increase of 26%.

Quebec showed very large gains in industrial and institutional and government activity for a non-residential increase of 65% and a residential increase of 13%, for a total 38% gain on the year. Conversely Ontario declined modestly in industrial permit values and made small gains in other non-residential sector which together with a 26% residential increase shows an overall 14% gain on 1967. Manitoba gained in all except the commercial sector for a total increase of 43%; while Saskatchewan showed a total decrease in permit value of 12 per cent in spite of increases in the commercial and residential sectors. Alberta gained appreciably in commercial and residential activity for an overall increase of 19% whereas British Columbia gained in the industrial and residential sectors with off setting decreases in commercial and institutional building to give a total increase of 6% over the previous year.

PERMIS DE BÂTIR

1968

Sommaire annuel

Les tableaux qui suivent présentent les données annuelles sur les permis de bâtir qui ont été délivrés dans plus de 1,400 municipalités du Canada en 1968. Les chiffres se compareraient à ceux qui sont publiés dans les rapports mensuels et sont disponibles pour chacune de ces municipalités de même que pour les zones métropolitaines et les régions économiques du Québec, de l'Ontario et du Manitoba. Le niveau de détail selon les structures est le même pour tous les tableaux sauf pour le tableau 3 qui donne plus de détails pour chacune des provinces. Dans ce tableau, la valeur de la construction domiciliaire est indiquée pour chaque genre d'habitation, pour les unités nouvelles de logement, pour les transformations et les réparations. Quant à la construction non-domiciliaire, elle a d'abord été partagée en trois grands groupes, puis subdivisée en seize catégories suivant leur usage prévu.

Comme en 1967, la valeur totale des permis de bâtir délivrés au cours de 1968 révèle une activité intense dans la construction de bâtiments. En effet la valeur estimative globale de \$4.7 milliards représente un accroissement de 17 p.c. par rapport à la valeur totale de \$4.1 milliards pour l'année 1967. Dans la construction domiciliaire, l'accroissement de l'activité s'est fait surtout sentir dans le secteur des appartements avec 50 p.c. d'augmentation dans la valeur, alors que la valeur des maisons unifamiliales et bifamiliales ne s'est accrue que de 12 p.c. et 8 p.c. respectivement. Prise dans son ensemble, la valeur de la construction domiciliaire entreprise au cours de 1968 s'est accrue de 25 p.c. par rapport à 1967. La valeur des permis non-domiciliaires a augmenté de 10 p.c. dans l'ensemble, l'accroissement s'étant surtout fait sentir dans le secteur industriel avec 25 p.c. d'augmentation, tandis que le secteur commercial n'a augmenté que de 3 p.c. et le secteur gouvernemental et institutionnel n'est accru de 10 p.c.

La répartition selon les provinces reflète une augmentation générale dans la construction domiciliaire mais la valeur des permis pour des fins non-domiciliaires a varié beaucoup d'une région à l'autre. À Terre-Neuve, on remarque que la construction d'édifices industriels et commerciaux a été très supérieure à celle de 1967 mais que les projets de construction gouvernementale et institutionnelle ont diminué. En Nouvelle-Ecosse, il y a eu diminution dans les permis de construction industrielle. Bien que les permis commerciaux et domiciliaires aient augmenté, la valeur globale de tous les permis a été inférieure à celle rapportée en 1967. Au Nouveau-Brunswick, l'accroissement de la construction industrielle et domiciliaire a contribué à une augmentation globale de 26 p.c. dans la construction entreprise au cours de 1968.

Au Québec, on remarque un accroissement de 65 p.c. dans la valeur des permis industriels et de 13 p.c. dans les permis domiciliaires. Au total, la valeur de tous les permis a été de 38 p.c. supérieure à celle de 1967. En Ontario cependant, la valeur des permis industriels a diminué légèrement tandis que l'activité dans la construction domiciliaire a augmenté de 26 p.c. par rapport à 1967. Au total, la valeur des permis a été de 14 p.c. supérieure à celle de 1967. Le Manitoba a progressé dans tous les secteurs à l'exception du secteur commercial tandis qu'en Saskatchewan, la valeur des permis a diminué de 12 p.c. malgré une augmentation dans les secteurs commercial et domiciliaire. L'Alberta a accusé des avances considérables dans les secteurs commercial et domiciliaire tandis qu'en Colombie-Britannique l'activité accrue dans les secteurs industriels et domiciliaires a été presqu'entièrement neutralisée par les diminutions dans les autres secteurs.
