- 7570 Change "Ton" to "Cu.yd.".

( over )

Revisions to Class 6310, "Platinum and other metals of the platinum group contained in concentrates or other forms".

Most of the platinum metals exported to the United States are actually metals which have been refined in the United Kingdom from Canadian ores and concentrates and then returned to Canada. As these refined metals undergo no further processing or fabrication after their return from the United Kingdom, they will in future no longer be recorded as domestic produce but will, instead, be recorded as foreign produce when re-exported from Canada. This change will be effective with statistics for January, 1959.

To permit accurate comparisons between monthly statistics for 1959 and those for 1958, appropriate adjustments to the 1958 monthly figures are shown below. These adjustments will be made in comparative figures for 1958 published in 1959 reports, and in Trade of Canada, 1958, Vol. II.

<u>1958</u>	<u>Country</u>		<u>Canadian Produce</u>	<u>Foreign Produce</u>
January	United States	Deduct	\$41,988	
		Add		841,988
February	" "	Deduct	622,381	
		Add		622,381
March	" "	Deduct	600,730	
		Add		600,730
April	" "	Deduct	647,118	
		Add		647,118
May	" "	Deduct	388,106	
		Add		388,106
June	" "	Deduct	470,352	
		Add		470,352
July	" "	Deduct	85,885	
		Add		85,885
August	" "	Deduct	93,818	
		Add		93,818
October	" "	Deduct	57,005	
		Add		57,005
November	" "	Deduct	56,803	
		Add		56,803

A substantially correct adjustment for earlier years can be made by simply transferring the value of all platinum metals exported to the United States from Canadian produce to foreign produce.

These adjustments to the values of domestic exports and re-exports recorded in statistical class 6310 will not affect in any way the overall balance of Canadian trade with the United States or other countries.

Change in Statistical Classification of Alloyed Lead and Products:

Effective January 1, 1959, statistical classes 6220, 6240, 6245 and 6250, are no longer reserved for commodities composed entirely of lead but, in addition, will include alloyed lead and alloyed lead products formerly classified in statistical classes 6630, 6670 and 6680.

Change in Method of Compiling Monthly Statistics Recorded in Statistical Class 9500, "Electrical Energy."

In recent years, monthly statistics recorded in statistical class 9500, "Electrical energy", were based largely on B-13 customs entries received at the Dominion Bureau of Statistics during the month to which the statistics related. Many of these entries were, however, adjusted to accord with transactions that were identifiable in reports of exports of electrical energy compiled by the Standards Branch of the Department of Trade and Commerce.

This recording procedure had two main defects. In the first place, B-13 entries covering exports of electricity frequently did not arrive at D.B.S. until several months after the actual date of export. In the second place, many of the B-13 entries could not be matched with transactions shown in the reports of the Standards Branch. These defects were in large part responsible for the sizable discrepancies that developed between the statistics shown in this publication and the statistical series published by the Public Finance and Transportation Division of D.B.S. and by the Federal Power Commission of the United States.

Effective with statistics for January 1959, data recorded in statistical class 9500 will be taken from the reports provided by the Standards Branch; B-13 customs entries will be used for checking purposes only. Any subsequent adjustments to the values shown in the initial reports of the Standards Branch will be recorded in export statistics of a later month.

As the report of the Standards Branch covering one month's exports of electrical energy is not received at D.B.S. until late in the following month, current figures shown in statistical class 9500 will relate to exports of the preceding month. Despite this time lag, it is expected that the interval elapsing between date of export and time of recording will be reduced by this change in method of compilation.

## EXPLANATORY NOTES

1. **Source of Data.** Statistics of exports are based upon the declarations of exporters (export entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods exported is the actual amount received by the exporter in Canadian dollars, excluding such charges as freight, insurance and handling. In effect, therefore, export values are taken f.o.b. point of shipment for export.
3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "gas engines and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles exported, while the value includes also the value of any parts of the article exported. For such items the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of "Exports of Canadian Produce" (also known as "Domestic Exports") include both goods wholly produced in Canada and goods previously included in statistics of imports which are changed in form by further processing in Canada and then exported. Statistics of "Exports of Foreign Produce" (also known as "Re-Exports") include only goods previously included in statistics of imports which are exported from Canada in the same condition as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods.
5. **Exclusions.** Export statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods shipped to Canadian armed forces or diplomats stationed outside Canada, goods financed under the Defence Appropriation Acts and shipped to Canada's N.A.T.O. allies, temporary exports for exhibition or competition, and bunker supplies and ships' stores sold to foreign vessels in Canadian ports.
6. **Countries Credited.** Exports are credited to the country to which they are consigned at the time the goods leave Canada. The country of consignment is the country to which goods are intended to pass without interruption of transit, except in the course of transfer from one means of conveyance to another.
7. **Time Periods.** Export statistics for any month include all goods declared on export entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and articles used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all articles appear in Volume II of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

### Value, Price and Volume Indexes of Exports of Canadian Produce

The following table gives index numbers of the declared (statistical) value of exports of Canadian produce by months, and of the unit value (price) and volume of these exports. The value index expresses the value of exports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregate (Laspeyres) type, and combines unit values calculated from the monthly export statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. These indexes are computed with 1948 as an interim reference base pending conversion to the Bureau's official post-war reference base (1949).

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1190-1340) has been transferred to the "miscellaneous products" group; the item "ships" (9400) has been transferred to the "iron and steel and their products" group.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in D.B.S. Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July, 1945 - June, 1950 (1948 = 100)".
