 Table 5. Special Transactions - Non-Trade		252
Table 6. Value, Price and Volume Indexes of Imports by Main Groups		260
Table 7. Value, Price and Volume Indexes of Imports by Sections		262

EXPLANATORY NOTES

1. **Source of Data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any month include all goods declared on import entries received at DBS during the calendar month, and on electricity reports received within the following calendar month. Most import entries reach DBS within a few days of the date that goods enter Canada, and delays rarely exceed one week. Electricity imports are usually included in statistics for the month in which these imports actually occurred.
3. **Coverage:** From January 1, 1964, import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses rather than being cleared on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouse and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January, 1964 issue of this report.

Both in 1964 and in earlier years, import statistics exclude the following commodity movements (some of these are recorded separately as Special Transactions - Non-Trade in Table 5 of this report): gold and gold products where the value of the gold content is 80% or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourists purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States which are credited to the country of origin.
5. **Quantities:** Tables 4 and 5 show quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I. Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). "Ton" means 2,000 pounds avoirdupois. "Cwt." means 100 pounds avoirdupois.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1961); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$100,000 or more (from January, 1964). Only about one-fifth of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. Amendments effective in any year are listed in the January report for that year.

Value, Price and Volume Indexes of Imports

The value, price and volume indexes of imports based on the nine main component material groups according to the old Statistical Classification - Imports are still carried in this report and will continue to be published throughout the current year for the convenience of the users of these data.

This report also marks the start of publication of the value, price and volume indexes of imports arranged according to the sections of the new Import Commodity Classification. The declared value indexes have been based on a grouping of 1948 values into appropriate sections of the new classification. The first six sections of this classification are represented in the index, and Section VII "Special Transactions Non-Trade", which does not enter into the import totals, is excluded. The price index has been based on a re-arrangement of the individual price lines used in calculating the old index, retaining, with some small changes, the original 1948 weighting pattern. The volume index is, as usual, derived by dividing the value index by the corresponding price index. No price or volume index can be compiled for Sections VI "Special Transactions - Trade" because of its non-homogeneity. In addition to presenting the January 1964 data, the re-arranged indexes have been also prepared for 1962 and 1963.

It should be noted that as of January, 1964, imports include both goods which are cleared by Customs immediately on arrival in Canada and also goods entered into customs warehouses without being cleared for domestic use. This new concept has also been introduced in the value, price and volume indexes but the effect on the indexes is considered of minor significance.

For an explanation of the new basis of compiling trade statistics, refer to the blue insert in the January, 1964, issue of this report.

EXPLANATORY NOTES

1. **Source of Data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any month include all goods declared on import entries received at DBS during the calendar month, and on electricity reports received within the following calendar month. Most import entries reach DBS within a few days of the date that goods enter Canada, and delays rarely exceed one week. Electricity imports are usually included in statistics for the month in which these imports actually occurred.
3. **Coverage:** From January 1, 1964, import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses rather than being cleared on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouse and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January, 1964 issue of this report.

Both in 1964 and in earlier years, import statistics exclude the following commodity movements (some of these are recorded separately as Special Transactions—Non-Trade in Table 5 of this report): gold and gold products where the value of the gold content is 80% or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourists purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States which are credited to the country of origin.
5. **Quantities:** Tables 4 and 5 show quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I. Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). "Ton" means 2,000 pounds avoirdupois. "Cwt." means 100 pounds avoirdupois.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1961); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$100,000 or more (from January, 1964). Only about one-fifth of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. Amendments effective in any year are listed in the January report for that year.

Value, Price and Volume Indexes of Imports

The value, price and volume indexes of imports based on the nine main component material groups according to the old Statistical Classification—Imports are still carried in this report and will continue to be published throughout the current year for the convenience of the users of these data.

This report also marks the start of publication of the value, price and volume indexes of imports arranged according to the sections of the new Import Commodity Classification. The declared value indexes have been based on a grouping of 1948 values into appropriate sections of the new classification. The first six sections of this classification are represented in the index, and Section VII "Special Transactions Non-Trade", which does not enter into the import totals, is excluded. The price index has been based on a re-arrangement of the individual price lines used in calculating the old index, retaining, with some small changes, the original 1948 weighting pattern. The volume index is, as usual, derived by dividing the value index by the corresponding price index. No price or volume index can be compiled for Sections VI "Special Transactions—Trade" because of its non-homogeneity. In addition to presenting the January 1964 data, the re-arranged indexes have been also prepared for 1962 and 1963.

It should be noted that as of January, 1964, imports include both goods which are cleared by Customs immediately on arrival in Canada and also goods entered into customs warehouses without being cleared for domestic use. This new concept has also been introduced in the value, price and volume indexes but the effect on the indexes is considered of minor significance.

For an explanation of the new basis of compiling trade statistics, refer to the blue insert in the January, 1964, issue of this report.

INTRODUCTORY NOTES	5

SUMMARY TABLES:

Imports by Countries	6
Imports by Sections from Principal Countries	7

DETAILED TABLE:

Imports by Commodities and Countries:

Section	Classes	
Live animals.....	1 - 19 to 9 - 99	8
Food, feed, beverages and tobacco.....	11 - 09 to 183 - 99	8
Crude materials, inedible	201 - 10 to 291 - 99	24
Fabricated materials, inedible	301 - 10 to 496 - 99	31
End products, inedible	501 - 19 to 961 - 99	74
Special transactions - Trade	970 - 10 to 970 - 99	137

INTRODUCTORY NOTES

This preliminary report is published with the aim of providing users of Canadian trade statistics with annual totals of 1964 imports, by commodity and by country, approximately one month earlier than it is normally possible to produce the December issue of the monthly report Imports by Commodities (Cat. No. 65-007). As this preliminary report will be superseded, in its entirety, by the more accurate information contained in the monthly Imports by Commodities report for December 1964, subscribers are advised to discard or destroy this preliminary publication when the December 1964 monthly import report is received.

These preliminary annual totals are produced by merging the cumulative import figures covering the first ten months of 1964 (as published in the monthly import report for October, 1964) with first-run tabulations for November and December, 1964, which in the interest of timeliness have not undergone the normal degree of screening. Accordingly, the advance annual import figures contained in this publication are subject to revision by the January to December cumulative totals which will appear in the regular monthly import report for December, 1964. Nevertheless, this preliminary information should prove sufficiently valid to be useful for most practical purposes during the interval until the December report becomes available.

Import statistics for only the calendar year 1964 as a whole are contained in this publication; figures for individual months or comparative annual totals for previous years are not included. This report is comprised of three tables: the first summarizes the value of imports by country and broad geographic groupings of countries; the second summarizes the value of imports, by sections of the commodity classification, from principal countries and trading areas; the third shows import values, and quantities whenever possible, by individual commodities and countries. These tables are adaptations of Tables 1, 3 and 4, respectively, appearing in the monthly Imports by Commodities report.

The value figures shown in this report are expressed in thousands of dollars rather than in the usual manner. The symbol -- designates values under \$500. Commodity class totals designated by an asterisk (*) may not add due to rounding. Users of these figures are requested to notify the External Trade Division, Dominion Bureau of Statistics, Ottawa, Ontario, if the rounding of value totals reduces the usefulness of these data to them. We are considering whether the values presented in regular Trade of Canada reports should also be limited to thousands of dollars.

Pertinent information as to source of data, time periods, coverage, countries credited, quantities, values and abbreviations is to be found in the Explanatory Notes and the Key to Abbreviations of Countries appearing in any issue of the monthly report "Imports by Commodities" for 1964.

 Table 7. Value, Price and Volume Indexes of Imports by Sections		270

EXPLANATORY NOTES

1. **Source of Data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any month include all goods declared on import entries received at DBS during the calendar month, and on electricity reports received within the following calendar month. Most import entries reach DBS within a few days of the date that goods enter Canada, and delays rarely exceed one week. Electricity imports are usually included in statistics for the month in which these imports actually occurred.
3. **Coverage:** From January 1, 1964, import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses rather than being cleared on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouse and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January, 1964 issue of this report.

Both in 1964 and in earlier years, import statistics exclude the following commodity movements (some of these are recorded separately as Special Transactions—Non-Trade in Table 5 of this report): gold and gold products where the value of the gold content is 80% or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourists purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States which are credited to the country of origin.
5. **Quantities:** Tables 4 and 5 show quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I. Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). "Ton" means 2,000 pounds avoirdupois. "Cwt." means 100 pounds avoirdupois.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1961); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$100,000 or more (from January, 1964). Only about one-fifth of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. Amendments effective in any year are listed in the January report for that year.

Value, Price and Volume Indexes of Imports

The value, price and volume indexes of imports based on the nine main component material groups according to the old Statistical Classification—Imports are still carried in this report and will continue to be published throughout the current year for the convenience of the users of these data.

This report also marks the start of publication of the value, price and volume indexes of imports arranged according to the sections of the new Import Commodity Classification. The declared value indexes have been based on a grouping of 1948 values into appropriate sections of the new classification. The first six sections of this classification are represented in the index, and Section VII "Special Transactions Non-Trade", which does not enter into the import totals, is excluded. The price index has been based on a re-arrangement of the individual price lines used in calculating the old index, retaining, with some small changes, the original 1948 weighting pattern. The volume index is, as usual, derived by dividing the value index by the corresponding price index. No price or volume index can be compiled for Sections VI "Special Transactions—Trade" because of its non-homogeneity. In addition to presenting the January 1964 data, the re-arranged indexes have been also prepared for 1962 and 1963.

It should be noted that as of January, 1964, imports include both goods which are cleared by Customs immediately on arrival in Canada and also goods entered into customs warehouses without being cleared for domestic use. This new concept has also been introduced in the value, price and volume indexes but the effect on the indexes is considered of minor significance.

For an explanation of the new basis of compiling trade statistics, refer to the blue insert in the January, 1964, issue of this report.
