### **Value, Price and Volume Indexes of Imports**

The value, price and volume indexes of imports based on the nine main component material groups according to the old Statistical Classification—Imports are still carried in this report and will continue to be published throughout the current year for the convenience of the users of these data.

This report also marks the start of publication of the value, price and volume indexes of imports arranged according to the sections of the new Import Commodity Classification. The declared value indexes have been based on a grouping of 1948 values into appropriate sections of the new classification. The first six sections of this classification are represented in the index, and Section VII "Special Transactions Non-Trade", which does not enter into the import totals, is excluded. The price index has been based on a re-arrangement of the individual price lines used in calculating the old index, retaining, with some small changes, the original 1948 weighting pattern. The volume index is, as usual, derived by dividing the value index by the corresponding price index. No price or volume index can be compiled for Sections VI "Special Transactions—Trade" because of its non-homogeneity. In addition to presenting the January 1964 data, the re-arranged indexes have been also prepared for 1962 and 1963.

It should be noted that as of January, 1964, imports include both goods which are cleared by Customs immediately on arrival in Canada and also goods entered into customs warehouses without being cleared for domestic use. This new concept has also been introduced in the value, price and volume indexes but the effect on the indexes is considered of minor significance.

For an explanation of the new basis of compiling trade statistics, refer to the blue insert in the January, 1964, issue of this report.
