## EXPLANATORY NOTES

**1. Source of Data:** Import documents collected by Customs are the basic source of import statistics, except for data on imports of electricity, which are reported by the importing firms directly to the Dominion Bureau of Statistics.

**2. Time Periods:** Import statistics for any month include all goods declared on import entries received at DBS during the calendar month. There is a lapse of up to a week between the actual customs clearance of imports and receipt of the relevant documents in DBS. Electricity imports are usually included in statistics for the month in which these imports actually occurred.

**3. Coverage:** Import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses. There may be, however, a difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance.

The following commodity movements are excluded from import statistics (most are recorded separately as Special Transactions-Non-trade in Table 4): gold and gold products where the value of the gold content is 80% or more of the total value except for dental gold alloy (class 880-27) and a small amount of gold scrap in the form of jewellers' sweepings (class 258-99); current coin; settlers' effects; private donations and gifts; tourist purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada or brought back by Canadians returning from postings outside Canada; temporary imports for exhibition or competition, and film imported exhibition or processing or returned after exhibition or processing abroad; ships of British construction and registry imported for use in Canada, and ships purchased for use as international carriers but not used to carry goods

## NOTES EXPLICATIVES

**1. Source des données:** La statistique des importations se fonde principalement sur les documents d'importation recueillis par les Douanes, sauf dans le cas des importations de l'électricité, qui sont déclarées directement par les compagnies importatrices au Bureau fédéral de la statistique.

**2. Périodes de temps:** La statistique des importations pour un mois quelconque comprend toutes les marchandises déclarées dans les documents d'importation parvenus au B.F.S. durant le mois civil. Il y a un décalage d'une semaine entre le dédouanement effectif des importations et l'arrivée des documents qui s'y rapportent au B.F.S. Les importations d'électricité sont ordinairement comprises dans la statistique du mois où elles ont effectivement eu lieu.

**3. Couverture:** La statistique des importations comprend toutes les marchandises dédouanées dès leur arrivée au Canada plus les marchandises entreposées à la douane. Il peut y avoir, toutefois, une différence entre le moment où les marchandises sont entreposées et celui où elles sont consignées comme importations; certaines marchandises entreposées à la douane attendent leur dédouanement pendant plusieurs mois.

Les mouvements de marchandises suivants sont exclus de la statistique des importations (la majorité est classée séparément en Transactions spéciales-hors commerce au tableau 4): l'or et les articles en or dont la valeur de la teneur en or représente 80 p. 100 ou plus de la valeur totale, sauf les alliages d'or dentaire (classe 880-27) et une petite quantité de déchets d'or sous forme de balayures de bijoutiers (classe 258-99); la monnaie courante; les effets d'immigrants; les dons et cadeaux privés; les achats des touristes exempts de douane; les marchandises importées par les forces armées ou les diplomates étrangers en poste au Canada ou rapportées par les canadiens rentrant de leur service hors du Canada; les importations provisoires pour expositions et concours, les films importés pour projection ou développement ou retournés à l'étranger après projection ou développement; les navires de construction et d'immatriculation britanniques importés pour usage au Canada,

between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

**4. Countries Credited:** Imports are credited to the country from which goods are consigned to Canada, except for goods produced in Central or South America but first consigned to Canada from the United States, which are credited to the country of origin.

**5. Quantities:** Tables 3 and 4 show quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I (DBS Catalogue No. 12-524). Where no unit of quantity is specified, the quantity columns are blank.

Units of weight or volume are measured net of the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Numbers refer to complete (or substantially complete) units imported, excluding parts. All units of quantity used in this report are defined on page 7.

**6. Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but importers often report c.i.f. values for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics.

All values appearing in this report are presented in thousands of dollars. Where the cumulative value of imports from a particular country in any commodity class is less than \$500, a line for that country is printed if a quantity is available and only the quantity is shown. Where the cumulative value is \$500 or more but the value for the current month is less than \$500 a quantity (if applicable) but no value appears in the current month column. All totals and cumulative values are calculated from unrounded figures and rounded independently; they will therefore often differ from the sum of the rounded figures shown in the report.

et les navires achetés pour usage comme transporteurs internationaux et non pour le transport de marchandises d'un endroit à un autre au Canada; les approvisionnements de soute et de bord achetés à l'étranger par les navires et les avions canadiens; en général toutes les importations provisoires et les marchandises ne faisant que passer par le territoire canadien.

**4. Pays de provenance:** Les importations sont créditées au pays de consignation vers le Canada, sauf les marchandises produites en Amérique centrale ou en Amérique du Sud et expédiées au Canada des États-Unis, lesquelles sont attribuées au pays d'origine.

**5. Quantités:** Les tableaux 3 et 4 donnent les quantités suivant les unités déterminées pour chaque classe dans la "Classification des marchandises d'importation", vol. I (B.F.S. numéro de catalogue 12-524). Lorsque l'unité de quantité n'est pas mentionnée, les colonnes de quantité demeurent en blanc.

Les unités de poids ou de volume sont mesurées nettes de l'emballage nécessaire à l'expédition, sauf dans certains cas spéciaux définis dans le tarif douanier. Le nombre vise les articles complets (ou suffisamment complets) importés, sauf les pièces de rechange. Toutes les unités de quantité employées dans le présent rapport sont expliquées à la page 7.

**6. Valeurs:** Ordinairement, la valeur des marchandises importées est la valeur déterminée pour fins de droits de douane. La loi canadienne sur les douanes exige généralement l'évaluation des marchandises f. à b. au point d'expédition dans le pays exportateur mais, les importateurs déclarent souvent la valeur c.a.f. pour les marchandises en franchise ou les marchandises sujettes à un tarif déterminé. On s'efforce d'assurer que la valeur f. à b. soit régulièrement employée dans la statistique des importations.

Toutes les valeurs qui paraissent dans le présent rapport sont indiquées en milliers de dollars. Lorsque la valeur cumulative des importations en provenance d'un pays en particulier dans une catégorie de marchandises est inférieure à \$500, une ligne apparaît dans le rapport si une quantité est disponible et la quantité seulement est indiquée. Lorsque la valeur cumulative est de \$500 ou supérieure mais, pour le mois en cours, inférieure à \$500, une quantité (si disponible, paraît mais par contre aucune valeur ne paraît dans la colonne du mois en cours. Tous les totaux et toutes les valeurs cumulatives sont calculés à partir de chiffres non arrondis et sont arrondis indépendamment en milliers de dollars; ils différeront donc souvent de la somme des chiffres arrondis du rapport.

7. **Abbreviations:** Many descriptions of countries and commodities used in this report are abbreviated or incomplete. A key to abbreviations of countries appears on page 8, and full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Rewards:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of this report.
9. **Country Classification:** Statistics are compiled and presented on a geographical basis and the use of state or territorial titles carries no political, territorial or constitutional implications.
7. **Abréviations:** Plusieurs descriptions de pays et de marchandises employées dans le présent rapport sont abrégées ou incomplètes. La clef aux abréviations des pays paraît à la page 9 et des descriptions complètes de toutes les marchandises paraissent dans la "Classification des marchandises d'importation", Vol. I. Les lettres "n.d.a." signifient "non dénommé ailleurs".
8. **Rectifications:** Toutes les données statistiques contenues dans le présent rapport sont sujettes à rectification. Les rectifications apportées aux rapports antérieurs paraissent dans les pages en couleur au début de ce rapport.
9. **Classification des pays:** Quoique les statistiques soient ventilées géographiquement les désignations des états et des territoires ne comportent nullement une signification politique, territoriale ou constitutionnelle.

## NOTES ON SAMPLING

### 1. Introduction

Commencing in January 1969, a random sample procedure was implemented to estimate the value of commodity imports from the United States based on individual documents valued less than \$1,500. This method results in more timely import estimates as well as improved quality and coverage since resources are freed to exercise a tighter quality control and estimates are made by individual commodity classes for documents valued less than \$200 which were included in a basket class 970-75. Documents for imports from the United States having a total value greater than \$1,500 and documents from all other countries regardless of value continue to be processed and compiled according to the complete-count method existing prior to January, 1969.

It should be noted, that the value of imports less than \$1,500 from the United States amounts to approximately 9% of the total value of Canada's imports.

All documents are divided into homogeneous commodity groupings according to the tariff item information on the document. The documents covering imports from the United States valued at less than \$1,500 are selected from each commodity group and a random sample is then drawn from them. Tests have been conducted to determine the optimum sample ratio for each commodity group to allow for such factors as seasonal variation.

### 2. Compilation

Once a document has been selected through the sample procedure, the value, quantity and duty of each sample line are mechanically inflated by dividing by the sample ratio for the particular commodity group. For example, if the sample ratio were 1/10, all lines selected for that group would be multiplied by ten. The inflated sample lines are then included with the complete-count statistics in the normal compilation and tabulation process.

### 3. Interpretation and Reliability of the Data

Since the estimates are based on a random sample method, there may be some over or under estimation of the commodity totals, especially when few documents fall within a particular commodity class. In order to assist in the interpretation of the results, the % coefficient of variation is calculated for each commodity class and summarized in the form of "reliability factors" shown in Table A. It is emphasized that these "reliability factors" apply **only** to imports from the United States, not to imports from any other country.

## NOTES SUR LA MÉTHODE D'ÉCHANTILLON

### 1. Introduction

A compter de janvier 1969, on a établi une nouvelle méthode d'échantillon pris au hasard pour estimer la valeur des importations de marchandises en provenance des États-Unis; cette méthode est fondée sur les déclarations individuelles dénotant une valeur inférieure à \$1,500. Cette méthode a comme résultat de fournir des estimations plus à jour des importations en même temps que d'améliorer la qualité et la couverture statistique du fait que le personnel bénéficie de plus de temps pour exercer un contrôle plus serré de la qualité et que, en ce qui concerne les valeurs de moins de \$200, les estimations sont faites pour chaque catégorie de marchandises. Auparavant les déclarations de cette nature étaient groupées dans la classe 970-75. Le dépouillement et la compilation des déclarations qui se rapportent aux importations de plus de \$1,500 en provenance des États-Unis et à celles des autres pays, quelle que soit leur valeur, continuent d'être effectués d'après la méthode de calcul complet en usage avant janvier 1969.

Il faut aussi tenir compte du fait que la valeur des importations de moins de \$1,500 en provenance des États-Unis ne s'élève qu'à environ 9% de la valeur globale des importations canadiennes.

Toutes les déclarations sont présentement réparties en groupes de marchandises homogènes déterminés d'après le poste du tarif indiqué sur la déclaration. On extrait de chaque groupe de marchandises les déclarations visant les importations de moins de \$1,500 en provenance des États-Unis et on tire ensuite un échantillon au hasard. Des essais ont été faits en vue d'établir le rapport d'échantillonnage optimum pour chaque groupe de marchandises pour tenir compte de facteurs tels que la variation saisonnière.

### 2. Compilation

Après sélection par échantillonnage d'une déclaration, la valeur, la quantité et les droits d'entrée de chaque ligne seront automatiquement gonflés en les divisant par le rapport d'échantillonnage qui s'applique au groupe de marchandises en question. Exemple: si le rapport est 1/10 toutes les lignes de ce groupe seront multipliées par dix. Les lignes gonflées seront ensuite intégrées à la statistique du calcul complet au cours de la compilation et de l'ordination régulières.

### 3. Interprétation et fiabilité des données

Vu que les estimations ressortent d'une méthode d'échantillon pris au hasard il peut arriver qu'il y ait surestimation ou sousestimation des totaux des marchandises, surtout quand un petit nombre de déclarations prises au hasard se trouvent à appartenir à une catégorie particulière. Pour aider à interpréter les résultats, on calcule pour chaque catégorie de marchandises un coefficient procentuel de variation qu'on résume ensuite sous forme de "facteurs de fiabilité" donnés au Tableau A. On notera que ces "facteurs de fiabilité" s'appliquent **exclusivement** aux importations en provenance des États-Unis, non à celles des autres pays.

Table B contains a list of commodity classes, together with the corresponding "reliability factor" for value and in most cases quantity also<sup>1</sup> and of groups, divisions and sections with "reliability factors" for value only. If an individual class is published by value alone, there will be no quantity "reliability factor". If a class appears in the monthly publication but not in Table B, this means that no entry was selected in the sample pertaining to that commodity class. This may have resulted from the fact that there were no documents valued less than \$1,500 for that month in this particular commodity class, in which case, the tabulated total is exact. Alternatively, by chance, no document was selected for a commodity class even though there were some transactions of less than \$1,500. In the latter case, studies comparing complete-count with sampling estimates indicate that the average underestimation is less than \$2,000.

The use of the "reliability factors" may best be illustrated by an example. Let us say that the value shown in a class for imports from the United States is \$100,000 and the corresponding value "reliability factor" is 2. At most, this "reliability factor" represents a coefficient of variation of 9.9% (say 10%). This means that the chances are better than 2 out of 3 that the true value, based on a complete-count, would lie in the range \$100,000 ± 10% i.e. \$90,000 to \$110,000.

<sup>1</sup> Note that if a class contains, as an illustration, both machinery (which requires a quantity) and parts (which do not) the quantity "reliability factor" may not reflect the true variation.

Tableau B donne une liste des catégories de marchandises et des "facteurs de fiabilité" correspondants pour la valeur et dans la plupart des cas la quantité<sup>1</sup> et de groupes, de divisions et de sections "facteurs de fiabilité" pour la valeur seulement. Lorsque seule la valeur est donnée pour une catégorie particulière on ne donnera pas de "facteur de fiabilité" pour la quantité. Lorsqu'une catégorie donnée dans la publication n'est pas mentionnée dans le Tableau B, c'est qu'on n'a choisi aucune entrée de l'échantillon se rapportant à ce groupe de marchandises. La raison peut en être qu'aucune déclaration de moins de \$1,500 n'a été soumise pendant le mois pour cette catégorie particulière de marchandises et dans ce cas, le total calculé est exact. D'un autre côté, la raison peut en être qu'aucune déclaration portant sur une catégorie de marchandises n'est sortie dans l'échantillon même si des transactions d'une valeur de moins de \$1,500 ont vraiment eu lieu. Dans ce dernier cas on a comparé les estimations portant sur le total avec les estimations de l'échantillon et on est parvenu à la conclusion que la sous-estimation moyenne représente moins de \$2,000.

Pour mieux faire comprendre l'emploi des "facteurs de fiabilité" voici un exemple. Supposons que la valeur donnée pour une catégorie d'importations en provenance des États-Unis soit de \$100,000 et que son "facteur de fiabilité" pour la valeur soit 2. Ce "facteur de fiabilité" représente tout au plus un coefficient de variation de 9.9% (soit 10%), ce qui veut dire qu'il y a plus de 2 chances sur 3 pour que la valeur réelle fondée sur un calcul complet tombe dans l'intervalle \$100,000 ± 10%, c'est-à-dire, entre \$90,000 et \$110,000.

<sup>1</sup> A remarquer que dans une catégorie de marchandises englobant des machines (où la quantité est indiquée) et des pièces de rechange (où la quantité n'est pas demandée) le "facteur de fiabilité" pour la quantité peut ne pas traduire la variation réelle.
