Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Highlights

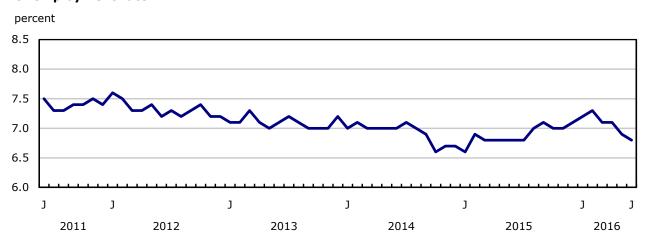

Employment was unchanged in June (0.0%). The unemployment rate declined 0.1 percentage points to 6.8%, as the number of people searching for work edged down.

Employment and unemployment rate, Canada, seasonally adjusted

Employment

Unemployment rate

Analysis — June 2016

Employment was unchanged in June (0.0%). The unemployment rate declined 0.1 percentage points to 6.8%, as the number of people searching for work edged down.

In the second quarter of 2016, employment was little changed (+11,000 or +0.1%). This is the smallest change in employment on a quarterly basis in two years.

In the 12 months to June, the number of people employed rose by 108,000 (+0.6%), with most of the gains in part time (+77,000 or +2.3%). Over the same period, the total number of hours worked fell slightly (-0.1%).

In June, employment fell among men 55 and older, while it increased for youths aged 15 to 24 and changed little for the other demographic groups.

British Columbia was the only province with employment growth. The other provinces showed little change.

Fewer people worked in construction, manufacturing, and in the "other services" industry. On the other hand, employment increased in accommodation and food services as well as in information, culture and recreation.

The number of employees fell in the public sector and was little changed in the private sector. At the same time, self-employment increased.

Employment down for men 55 and older, and up for youth

Employment fell by 15,000 for men aged 55 and older, and the unemployment rate increased 0.5 percentage points to 6.5%. Over the 12 months to June, employment for this group was up 35,000 (+1.7%), mostly a result of growth in their population (+153,000).

For women 55 and older, employment was little changed in June, and the unemployment rate was 5.2%. Compared with a year earlier, however, employment gains for this group totalled 101,000 (+6.4%) — partly a result of an increase in their population (+155,000).

Employment for men and women aged 25 to 54 was little changed on both a monthly and year-over-year basis. Nevertheless, their unemployment rate fell 0.2 percentage points to 5.8% in June, as fewer of them searched for work.

There were 18,000 more youths aged 15 to 24 working in June, with increases in part-time work. The youth unemployment rate was 13.0% in June. On a year-over-year basis, youth employment was down 46,000 (-1.9%) and their population declined 47,000.

Summer employment for students

From May to August, the Labour Force Survey collects labour market data about youths aged 15 to 24 who were attending school full time in March and who intend to return full time in the fall. The June survey results provide an early indication of the summer job market, especially for students aged 20 to 24, as many students aged 15 to 19 are still in school. The data for July and August will provide further insight into the summer job market for students. The published data are not seasonally adjusted; therefore, comparisons can only be made from one year to another.

Among students aged 20 to 24 who intend to return to school full time in the fall, the employment rate was 64.0% in June, 3.2 percentage points lower than 12 months earlier. The unemployment rate for this group of returning students was 10.5%, little changed from June 2015.

Employment gains in British Columbia

British Columbia was the lone province with employment gains in June (+16,000 or +0.7%), continuing an upward trend going back to spring 2015. The unemployment rate in the province was 5.9%, the lowest rate in the country. On a year-over-year basis, employment in British Columbia was up 70,000 or 3.0%, the fastest rate of growth among the provinces.

In Quebec, employment was little changed in June. Compared with 12 months earlier, employment in the province was up 33,000 (+0.8%), and the unemployment rate was down 1.0 percentage point to 7.0%.

Employment was virtually unchanged in Ontario. With fewer people participating in the labour market, the unemployment rate fell from 6.6% to 6.4%, the lowest rate since September 2008. On a year-over-year-basis, employment in the province grew by 63,000 (+0.9%).

In Alberta, employment was also virtually unchanged in June, and the unemployment rate was 7.9%. the 12 months to June, overall employment in the province fell by 52,000 (-2.2%), with full-time losses totalling 91,000 (-4.8%). Over the same period, the unemployment rate was up 2.1 percentage points.

Employment increases in all three territories

The Labour Force Survey also collects labour market information on the territories. This information is produced monthly in the form of three-month moving averages.

In the second quarter of 2016, employment in Yukon increased by 800 from the first quarter. Over the same period, the unemployment rate was little changed at 5.2%.

Employment in the Northwest Territories rose by 400 in the second guarter of 2016. Over the same period, the unemployment rate increased by 0.7 percentage points to 8.0% as more people searched for work.

In Nunavut, employment increased by 800 in the second quarter of 2016. During the same period, the unemployment rate fell by 3.9 percentage points to 13.5%.

Industry perspective

Following an increase in May, employment in construction was down 29,000 in June. Before adjusting for seasonal factors, the number of people working in this industry increased from May to June. However, the increase was less than usual, resulting in a seasonally-adjusted decrease. On a year-over-year basis, employment in construction was little changed.

Also following an increase in May, employment in manufacturing declined by 13,000 in June, bringing losses to 30,000 (-1.8%) on a year-over-year basis. Employment in manufacturing has been on a downward trend since the start of 2016.

The number of people working in the "other services"— such as those related to religious, grant-making, civic, and professional organizations — also decreased in June (-9,300). On a year-over-year basis, however, employment in this industry was up 23,000 (+3.1%).

On the other hand, employment rose 20,000 in accommodation and food services. This was the third increase in four months for the industry.

Employment also rose in information, culture and recreation (+14,000), bringing gains to 44,000 over the 12 months to June, or +5.9%—the strongest rate of employment growth among all industries.

While employment in natural resources was little changed in June, it was down 11.4% from 12 months earlier, with most of this decrease occurring since the start of 2016.

Employment in public administration was virtually unchanged in June, following an increase of 19,000 in May. Over the two months, employment increased in federal public administration, coinciding with activities related to the 2016 Census. The increase was concentrated among survey interviewers and statistical clerks, an occupational group that corresponds with the type of work done during federal elections and censuses.

In June, public sector employment fell by 28,000, while the number of private sector employees was little changed. On the other hand, self-employment increased by 38,000 (+1.4%).

Compared with 12 months earlier, public sector employment was unchanged, while the number of private sector employees was slightly up (+62,000 or +0.5%) and self-employment edged up by 46,000 (+1.7%).

Impact of the wildfires in the area of Fort McMurray on the LFS collection and estimates

As a result of the wildfires affecting northern Alberta that led to the evacuation of residents from the Fort McMurray area, data for the Labour Force Survey (LFS) for the census agglomeration of Wood Buffalo were not collected in either May or June.

Using standard statistical techniques, missing data for Wood Buffalo were replaced by substituted values taken from similar respondents from surrounding areas.

The population of Wood Buffalo represents 2% of the population of Alberta. Therefore, the impact of this interruption in data collection is minimal on provincial estimates and negligible on national estimates.

The impact is larger for sub-provincial areas, specifically for the economic region of Wood Buffalo—Cold Lake, where approximately 60% of the population are residents of Wood Buffalo. As a result, separate estimates for this economic region — which are normally available in the form of three-month moving averages — will not be published for June.

Regular LFS collection in all other areas of Canada was unaffected, and occurred from Sunday, June 19 until Tuesday, June 28. The LFS reference week for the month of June was Sunday, June 12 to Saturday, June 18.

Statistics Canada is aware of the ongoing difficult circumstances of residents of the Fort McMurray area. The decision to resume collection for the LFS in Fort McMurray will be taken in collaboration with Alberta provincial and local governments.

Note to readers

The Labour Force Survey (LFS) estimates for June are for the week of June 12 to 18.

The LFS estimates are based on a sample and are therefore subject to sampling variability. As a result, monthly estimates will show more variability than trends observed over longer time periods. For more information, see "Interpreting Monthly Changes in Employment from the Labour Force Survey." Estimates for smaller geographic areas or industries also have more variability. For an explanation of sampling variability of estimates and how to use standard errors to assess this variability, consult the "Data quality" section of the publication Labour Force Information (71-001-X).

This analysis focuses on differences between estimates that are statistically significant at the 68% confidence level.

The LFS estimates are the first in a series of labour market indicators released by Statistics Canada, which includes indicators from programs such as the Survey of Payroll Employment, Earnings and Hours (SEPH), Employment Insurance statistics, and the Job Vacancy and Wage Survey. For more information on the conceptual differences between employment measures from the LFS and SEPH, refer to section 8 of the Guide to the Labour Force Survey (71-543-G).

The employment rate is the number of employed people as a percentage of the population aged 15 and older. The rate for a particular group (for example, youths aged 15 to 24) is the number employed in that group as a percentage of the population for that group.

The unemployment rate is the number of unemployed as a percentage of the labour force (employed and unemployed).

The participation rate is the number of employed and unemployed as a percentage of the population.

Seasonal adjustment

Unless otherwise stated, this release presents seasonally adjusted estimates, which facilitates comparisons by removing the effects of seasonal variations. For more information on seasonal adjustment, see Seasonally adjusted data - Frequently asked questions.

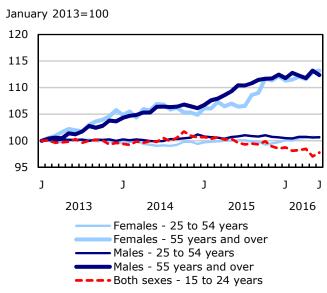

Chart 1 shows trend-cycle data on employment. These data represent a smoothed version of the seasonally adjusted time series, which provides information on longer-term movements, including changes in direction underlying the series. These data are available in CANSIM table 282-0087 for the national level employment series. For more information, see the StatCan Blog and Trend-cycle estimates – Frequently asked questions.

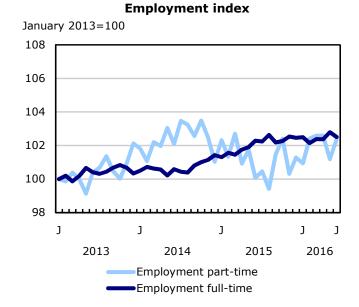

Next release

The next release of the LFS will be on August 5.

282-0128	Labour force survey estimates (LFS), by census metropolitan area based on 2011 Census boundaries, sex and age group, 3-month moving average, unadjusted for seasonality, monthly
282-0129	Labour force survey estimates (LFS), by census metropolitan area based on 2011 Census boundaries, sex and age group, annual
282-0130	Labour force survey estimates (LFS), employment by census metropolitan area based on 2011 Census boundaries and North American Industry Classification System (NAICS), 3-month moving average, unadjusted for seasonality, monthly
282-0131	Labour force survey estimates (LFS), employment by census metropolitan area based on 2011 Census boundaries and North American Industry Classification System (NAICS), annual
282-0134	Labour force survey estimates (LFS), by selected census agglomerations based on 2011 Census boundaries, annual
282-0135	Labour force survey estimates (LFS), by census metropolitan area based on 2011 Census boundaries, 3-month moving average, seasonally adjusted and unadjusted, monthly
282-0136	Labour force survey estimates (LFS), by Montréal, Toronto and Vancouver census metropolitan areas based on 2011 Census boundaries, seasonally adjusted and unadjusted, monthly

282-0137	Labour force survey estimates (LFS), by population centres and rural areas based on 2011 Census boundaries, sex and age group, unadjusted for seasonality, monthly
282-0138	Labour force survey estimates (LFS), by population centres and rural areas based on 2011 Census boundaries, sex and age group, annual
282-0139	Labour force survey estimates (LFS), employment by population centres and rural areas based on 2011 Census boundaries, class of worker and North American Industry Classification System (NAICS), unadjusted for seasonality, monthly
282-0140	Labour force survey estimates (LFS), employment by population centres and rural areas based on 2011 Census boundaries, class of worker and North American Industry Classification System (NAICS), annual
282-0141	Labour force survey estimates (LFS), by National Occupational Classification (NOC) and sex, unadjusted for seasonality, monthly
282-0142	Labour force survey estimates (LFS), by National Occupational Classification (NOC) and sex, annual
282-0143	Labour force survey estimates (LFS), by usual hours worked, National Occupational Classification (NOC) and sex, unadjusted for seasonality, monthly
282-0144	Labour force survey estimates (LFS), by usual hours worked, National Occupational Classification (NOC) and sex, annual
282-0145	Labour force survey estimates (LFS), by actual hours worked, National Occupational Classification (NOC) and sex, unadjusted for seasonality, monthly
282-0146	Labour force survey estimates (LFS), by actual hours worked, National Occupational Classification (NOC) and sex, annual
282-0147	Labour force survey estimates (LFS), multiple jobholders by National Occupational Classification (NOC), sex and age group, unadjusted for seasonality, monthly
282-0148	Labour force survey estimates (LFS), multiple jobholders by National Occupational Classification (NOC), sex and age group, annual
282-0149	Labour force survey estimates (LFS), job tenure by National Occupational Classification (NOC) and sex, unadjusted for seasonality, monthly
282-0150	Labour force survey estimates (LFS), job tenure by National Occupational Classification (NOC) and sex, annual
282-0151	Labour force survey estimates (LFS), wages of employees by type of work, National Occupational Classification (NOC), sex, and age group, unadjusted for seasonality, monthly
282-0152	Labour force survey estimates (LFS), wages of employees by type of work, National Occupational Classification (NOC), sex, and age group, annual
282-0153	Labour force survey estimates (LFS), employees working overtime (weekly) by National Occupational Classification (NOC), sex and age group, unadjusted for seasonality, monthly
282-0154	Labour force survey estimates (LFS), employees working overtime (weekly) by National Occupational Classification (NOC), sex and age group, annual

282-0155	Labour force survey estimates (LFS), employment by National Occupational Classification (NOC), seasonally adjusted, monthly
282-0156	Labour force survey estimates (LFS), employment by economic region based on 2011 Census boundaries and National Occupational Classification (NOC), three-month moving average, unadjusted for seasonality, monthly
282-0157	Labour force survey estimates (LFS), employment by economic region based on 2011 Census boundaries and National Occupational Classification (NOC), annual
282-0158	Labour force survey estimates (LFS), employment by census metropolitan area based on 2011 Census boundaries and National Occupational Classification (NOC), three-month moving average, unadjusted for seasonality, monthly
282-0159	Labour force survey estimates (LFS), employment by census metropolitan area based on 2011 Census boundaries and National Occupational Classification (NOC), annual
282-0160	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, National Occupational Classification (NOC) and sex, unadjusted for seasonality, monthly
282-0161	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, National Occupational Classification (NOC) and sex, annual
282-0162	Labour force survey estimates (LFS), hourly wage distribution of employees by type of work, National Occupational Classification (NOC) and sex, unadjusted for seasonality, monthly
282-0163	Labour force survey estimates (LFS), hourly wage distribution of employees by type of work, National Occupational Classification (NOC) and sex, annual
282-0164	Labour force survey estimates (LFS), employees by union status and National Occupational Classification (NOC), Canada, annual
282-0165	Labour force survey estimates (LFS), employment by Aboriginal group, National Occupational Classification (NOC), sex and age group, annual
282-0166	Labour force survey estimates (LFS), employment by Aboriginal group, National Occupational Classification (NOC) and age group, Canada, selected provinces and regions, annual
282-0167	Labour force survey estimates (LFS), average usual hours and wages of employees by age group, sex, union coverage, job permanency, and National Occupational Classification (NOC), unadjusted for seasonality, monthly
282-0168	Labour force survey estimates (LFS), regional unemployment rates used by the Employment Insurance Program, three-month moving average, seasonally adjusted, monthly
282-0200	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, North American Industry Classification System (NAICS), and sex, unadjusted for seasonality, monthly
282-0201	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, North American Industry Classification System (NAICS), and sex, annual
282-0204	Labour force survey estimates (LFS), hourly wage distributions of employees by type of work, North American Industry Classification System (NAICS), and sex, unadjusted for seasonality, monthly

282-0205	Labour force survey estimates (LFS), hourly wage distributions of employees by type of work, North American Industry Classification System (NAICS), and sex, annual
282-0208	Labour force survey estimates (LFS), by educational degree, sex and age group, unadjusted for seasonality, monthly
282-0209	Labour force survey estimates (LFS), by educational degree, sex and age group, annual
282-0210	Labour force survey estimates (LFS), by family type and family age composition, unadjusted for seasonality, monthly
282-0211	Labour force survey estimates (LFS), by family type and family age composition, annual
282-0212	Labour force survey estimates (LFS), hours lost by employees by reason of absence, full and part week and sex, unadjusted for seasonality, monthly
282-0213	Labour force survey estimates (LFS), hours lost by employees by reason of absence, full and part week and sex, annual
282-0214	Labour force survey estimates (LFS), activity prior to unemployment by sex and age group, unadjusted for seasonality, monthly
282-0215	Labour force survey estimates (LFS), activity prior to unemployment, by sex and age group, annual
282-0216	Labour force survey estimates (LFS), reason for leaving job during previous year by sex and age group, unadjusted for seasonality, monthly
282-0217	Labour force survey estimates (LFS), reason for leaving job during previous year by sex and age group, annual
282-0218	Labour force survey estimates (LFS), reason for not looking for work, by sex and age group, unadjusted for seasonality, monthly
282-0219	Labour force survey estimates (LFS), reason for not looking for work, by sex and age group, annual
282-0220	Labour Force Survey estimates (LFS), employees by union status, sex and age group, Canada and provinces, annual
282-0221	Labour Force Survey estimates (LFS), employees by union status, sex, age group and education level, Canada, annual
282-0223	Labour Force Survey estimates (LFS), employees by union status, North American Industry Classification System (NAICS) and sex, Canada, annual
282-0224	Labour Force Survey estimates (LFS), employees by union status, establishment size, job tenure, type of work and job permanency, Canada, annual
282-0225	Labour Force Survey estimates (LFS), average weekly earnings, average hourly wage rate and average usual weekly hours by union status and type of work, Canada and provinces, annual
282-0226	Labour force survey estimates (LFS), by Aboriginal group, sex and age group, Canada, selected provinces and regions, annual

282-0227	Labour force survey estimates (LFS), by detailed Aboriginal group, sex and age group, Canada and selected regions, annual
282-0228	Labour force survey estimates (LFS), by Aboriginal group, educational attainment and age group, Canada and selected regions, annual
282-0229	Labour force survey estimates (LFS), employment by Aboriginal group, North American Industry Classification System (NAICS), sex and age group, annual
282-0230	Labour force survey estimates (LFS), employment by Aboriginal group, North American Industry Classification System (NAICS) and age group, Canada and selected regions, annual
282-0233	Labour force survey estimates (LFS), average hourly and weekly wages and average usual weekly hours by Aboriginal group and age group, Canada, selected provinces and regions, annual

Selected surveys from Statistics Canada

	3701	Labour Force Survey		
--	------	---------------------	--	--

Selected summary tables from Statistics Canada

- Average hourly wages of employees by selected characteristics and occupation, unadjusted data, by province (monthly)
- · Days lost per worker by industry and sex
- · People employed, by educational attainment
- Reasons for part-time work by sex and age group
- Self-employment, historical summary
- Employment by age, sex, type of work, class of worker and province (monthly)
- Actual hours worked per week by industry, seasonally adjusted (monthly)
- Labour force characteristics, unadjusted, by territory (3 month moving average)
- Employment by industry and sex
- · Full-time and part-time employment by sex and age group
- · Labour force characteristics by age and sex
- · Labour force characteristics by immigrant status of population aged 25 to 54, and by educational attainment
- · Labour force characteristics by immigrant status, by detailed age group

- Labour force characteristics by immigrant status of population aged 25 to 54, by country of birth
- Days lost per worker due to illness or disability, by sex, by province
- Employment by industry
- Labour force characteristics, seasonally adjusted, by province (monthly)
- Labour force characteristics, unadjusted, by province (monthly)
- · Labour force, employment and unemployment, levels and rates, by province
- Economic indicators, by province and territory (monthly and quarterly)
- Days lost per worker by reason, by provinces
- Labour force characteristics, seasonally adjusted, by census metropolitan area (3 month moving average)
- Labour force characteristics, unadjusted, by economic region (3 month moving average)
- Distribution of employed people, by industry, by province
- Employment by major industry group, seasonally adjusted, by province (monthly)
- Labour force characteristics
- Labour force characteristics, unadjusted, by census metropolitan area (3 month moving average)
- Labour force characteristics, population 15 years and older, by census metropolitan area
- Labour force characteristics, population 15 years and older, by economic region, by province
- Canada: Economic and financial data
- Labour force characteristics by sex and age group
- Labour force characteristics by immigrant status of population aged 25 to 54, by province
- Latest statistics (monthly)

- Average standard error of change in two consecutive months (see "Sampling Errors" in Data Quality for further explanations).
- Since 1992, the Labour force survey (LFS) has been conducted in the Yukon, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are not included in the national totals. In 1995, the LFS in the Yukon underwent a sample redesign. One result of the redesign was that the covered population increased from 85% to 92%, which is reflected by the sharp increase in the three month moving averages estimates of January, February and March of 1995 for all the level estimates. Users are therefore warned to be cautious when comparing estimates before January 1995 to estimates for January 1995 and forward.
- Since 2001, the Labour force survey (LFS) has been administered in the Northwest Territories, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are not included in national totals.
- Since 2004, the Labour force survey (LFS) has been administered in Nunavut, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are 3-month moving averages and are not included in national totals. From January 2004 to December 2007, estimates represent about 70% of all Nunavut residents aged 15 and over. Starting in January 2008, coverage was extended to 92%, so that by March 2008, the 3-month moving average is completely based on the extended coverage. Because of the large difference in coverage, users are recommended not to compare estimates prior to January 2008 with data afterwards. The January and February 2008 3-month moving average estimates are based on a mix of both coverages, since the extended coverage was introduced in January 2008. Estimates from January 2004 to December 2007 are based on the 10 largest communities in Nunavut: Iqaluit, Rankin Inlet, Cambridge Bay, Kugluktuk, Baker Lake, Arviat, Pond Inlet, Cape Dorset, Pangnirtung, Igloolik. Estimates from March 2008 to present cover the above communities as well as: Taloyoak, Gjoa Haven, Kugaaruk, Coral Harbour, Repulse Bay, Qikiqtarjuaq, Arctic Bay, Hall Beach, Clyde River.

Data quality

Definitions and explanations

The **labour force** is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed persons are those who, during the reference week:

- (a) did any work at all at a job or business;
- (b) had a job but were not at work.

A person is considered to be **full-time** if his/her usual hours at the main job are 30 or more hours per week. When the number of hours worked at the main job is usually less than 30 hours per week then he/she is considered to be **part-time**.

Unemployed persons are those who, during the reference week:

- (a) were without work, had actively looked for work in the past four weeks (ending with reference week) and were available for work:
- (b) had not actively looked for work in the past four weeks but were on temporary layoff and were available for work;
- (c) had not actively looked for work but had a new job to start within four weeks from the reference week and were available for work.

Persons in the civilian non-institutional population 15 years of age and over who, during the reference week, were neither employed nor unemployed are classified as **not in the labour force**.

The **unemployment rate** represents the number of unemployed persons expressed as a percentage of the labour force (employed and unemployed). The unemployment rate for a particular group (for example, age, sex, or marital status) is the number unemployed in that group expressed as a percentage of the labour force for that group.

The **participation rate** represents the total labour force expressed as a percentage of the population aged 15 years and over. The participation rate for a particular group (for example, women aged 25 years and over) is the labour force in that group expressed as a percentage of the population for that group.

The employment rate represents the number of employed persons expressed as a percentage of the population aged 15 years and over. The employment rate for a particular group (for example, age, sex, marital status, or province) is the number employed in that group expressed as a percentage of the population for that group.

The **part-time** rate represents the number of persons employed part-time expressed as a percentage of the employed. The part-time rate for a particular group (for example, age or sex) is the number of persons employed part-time in that group expressed as a percentage of the employed for that group.

All geographic regions are based on the 2011 Census boundaries.

Seasonal adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. The seasonally adjusted series contains irregular as well as longer-term cyclical fluctuations.

The seasonally adjusted series are revised each year to take into account current data and to generate new forecast factors for the next twelve months. The data are therefore subject to slight revisions in future issues of this publication.

For more information on seasonal adjustment, see Seasonally adjusted data – Frequently asked questions.

Sampling variability of estimates

Estimates in this publication are based on the Labour Force Survey, a monthly survey of approximately 56,000 households across Canada. Because the entire population is not surveyed, the estimates are subject to sampling error. While the published estimate is the best available indicator of the real value, changes in the level of any estimates between two months can be the result of a true change, or sampling variability. The sampling error can be estimated by calculating the standard error for the published estimate or statistic. These standard errors have been included in the publication tables in order to assist users in interpreting the data. They are based on 12-month averages and are updated twice a year, in February and August.

Interpretation based on standard error

Approximately two-thirds (68%) of the time, a change greater than the sampling error indicates a real change. The larger the change compared to the standard error, the better the chance that we are observing a real change, as opposed to a change due to sampling variability. At the 95% confidence level, the change in the estimate must be greater than twice the standard error in order to ensure that change is real.

Movements in estimates that are smaller than the standard error are less likely to reflect a real change and more likely to be due to sampling variability. While the above is true for monthly movements, one can have more confidence in a series of consecutive movements in the same direction, even though some of the monthly movements may be smaller than the standard error.

Interpretation based on confidence intervals

Confidence intervals provide another way of looking at the variability inherent in estimates of sample surveys. To illustrate how to calculate the confidence interval, let us say that one month the published estimate for total employment rose by 16,000 to reach 18,000,000. The associated standard error for the movement estimate is 29,500. The standard error used to interpret the movement estimate indicates that:

- There are approximately two chances in three (68%) that the real value of the movement between the two months falls within the range -13,500 to +45,500 (16,000 + or - one standard error).
- There are approximately nine chances in ten (90%) that the real value of the movement between the two months falls within the range -31,200 to +63,200 (16,000 + or - 1.6 times the standard error).
- There are approximately nineteen chances in twenty (95%) that the real value of the movement between the two months falls within the range -43,000 to +75,000 (16,000 + or – two standard errors).

For more detailed explanations on the sampling variability of estimates, and in particular for information on how to assess the variability of level estimates, consult the Data quality section of the Guide to the Labour Force Survey (71-543-G).
