## THE LABOUR FORCE

## NOVEMBER, 1962

In the week ended November 17, 1962, the Canadian labour force was estimated at 6,612,000. Of this total, 6,270,000 persons were employed for all or mart of the week and 342,000 were unemployed for the whole week. While the total labour force remained virtually unchanged from October, the employed decreased by 56,000 and the unemployed increased by 59,000. Compared With November 1061 , the labour force was 108,000 higher, the employed having, increased by 115,000 over the year, while the unemployed showed little change.

Dearly all of the decrease in employment
kutwen October now liover:ber occurred in a: culture. Nonarimulumal amnloment :as 147,00 hither than in lovember last vary employment in agriculture was 32,000 lower. Run accounted for all of the drown in monlonuant from October. Wplozerent isc"eared betivem liovombse 19 in and lavender 1752 by 55, awn men and by 60,000 an me women.

The unemployment rate in lovember was 5.2, compared with rates of $i .3$ in October this var and 5. it in November 1961.

Cwing to ita roorraphic Incation Canada is sulfect to bide seascnal variations in climate, wich along with other factors, have a pronounced effect on the employment level. These influences also affect the number of unemployed, but to a lesser extent because many people retire from the labour force during their inactive season. This is narticularly true of workers in primary industries and construction, students and women in trade and sone branches of manufacturing.

The 1960-61 average amplitude of seasonal variation was more than 10 per cent for employment and almost 75 per cent for unemployment. In actual numbers, the change in total employwent between the winter trough and the summer peak averaçed 636,000 over the past ten years. The drop in totil unemployment between the Winter high and the sumes low points nveraged 2f 5000 nver the ata newiot.

Sensonal nattros have not ehaned rach in recent years. izxinum amponent for the conony as a whole is attained in July or Amsen while minimu emplosment occurs in Febminry or larcin. Conversely, unernolovment reaches a naak in Febmary or liarch and a low boint in the sumarer.

The arapliturle of seasonal variation is riuch preater for nen than for wonen. The 1960-1963 avcrare for emploment vas lit ner cent for men
and 8 mer cent for women thile for unamiloyment it was $3 / 4$ ner cent for rion and 37 per cent for wown.

The seasonal pattorn varies betwoon regions. The meak of conomic activity occurs in July or Aupust in all rerions. The seasonal low point wrunly is in Farch in the itlantic and mebec rorions, in Fobmary in the Ortario and l'rairic rogions and in January in liritish Columbia.

The anount of fluctiation above and helow the mnual avorare is quite different amone respions. For employment the armlitude ranges from \& ner cent in Ontario to 2 ner cent in thes itlantic rerrion and for unemplorment from 66 per cent in Ontario to 104 nor cent in the Prairie repion.

Eriployment neaks and trourhs do not coincide for all industries. Generally, the neaks occur in vidsumner and the low points in the winter Fonths. However, in service, the hifh woint in eminlorment occurs in June and the low in hupust. Trade has two neaks - one in micisunuer and the other in the ore-Christinas yeriod. 1.0 pronour.ced seasonal pattern is apuarent in finance.

In the foods-sroducing industries the am:nlitude of seasonal variation is about 22 per cent as compared to 6 per cent for tho serviceproducing industries.
cirmitude of Seasonal Varation Irciustrial finloment 1960-1961 iverage

Labour force narticination rates also oxhibit seasonal patterns. Seasonal indicus (see chart nare 8) shov, for specified ape and sex proups, fluctuations in the warticipation rate above and below the ansual averare. For both rion and women, the amplitude of seasonal variation is Ereatest for those in the $14-19$ arge group because of the large number of students entering the labour force during sunner vacations. It is lowest for the rroup 25-4 4 vears of are, and particularly for men, for whom the amplitude of seasonal variation is slifhtly more than 1 ver cent.
(contimud on rage :s)

## Tecinical Notes <br> Scope of : shour Force Survey

The statistics contained in this report are based on information obtained through a sample survey of households. Interviews are carried out in about 35,000 households chosen by area sampling methods across the country. The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. Since then it has been carried out monthly. Estimates of employment, unemployment and non-labour force activity refer to the speciflic week covered by the survey each month.

The sample used in the surveys of the labour force has beers designed to cover all per

Labour Force Statistics

Contents of the Tables - The results of the survey are presented in the tables on pages 4 to 7 of this report

Canadn, Labour Force (pages 4 and 5). Tables 1 to 3 refer to the Labour force, employment and unemployment and contain labo:x force participation and unemployment rates.

Canada, Employed (page 6). Tables 4 to 6 contain further detasl on employment. Canada, Unemnloyed (pace 7). Table 7 contains further detall on unemployment.

Regions, Labour Force (page 7).
Table 8 contains labour force data for the regions.
Supulementary Data - From tine to time, additional data on particular aspects of the labour force or its conponents will be obtained. Such material, as it becones available, will be released through occasicnal supplements inserted in or attached to regular issues of this report.
sons in the civilian noninstitutional population who are 14 years of age or over and who reside in Canada, with the exception of: members of the armed forces, inmates of institutions, residents of the Yukon and Northwest Territories and Indians on reservations. These excluded categories amount to about three per cent of the total population 14 years of age and over.

Estifates derived from a sample survey are subject to sampling and other kinds of error. Aspects of this subject in relation to the Labour Force Survey are reviewed under "Relfability of Estimates" on page 8.

Other Lata Available - In addition to the published statistics, thers is a considerable amount of data which can be obtained on request. Following is a list of material available.

For Canada only:

1. Age and sex distributions.
2. Marital status and sex distributions.
3. Employed -
(a) Reasons for working less than full-tine.
(b) Hours worked by sex for total amployed, agriculture and non-agriculture, and for paid worliers, non-arriculture.
(c) Industry and occupation groups, by sex for total enployed and for paid workers. 4. Persons not in the labour force by category.

## For regions:

1. Labour force -
(a) By age.
(b) Agriculture and non-agriculture by sex. 2. Employed by age.

## Dofinitions and Explanations

Labour Force - The civildan labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the survey week, were employed or unemployed.

Emnloyed - The employed includes all persons who, durins the survey week:
(a) did any work for pay or profit;
(b) did any work which contributed to the running of a farm or business operated by a related nember of the household; or
(c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons.
Persons who had jobs but did not work during the survey week and who also looked for work are included in the unemployed as persons without work and seeking work.

Uncmployed - The unemployed includes all persons who, through the survey week:
(a) were without work and seeking work, i.e., did no work during the survey week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the conmunity; or
(b) were temporarily laid off for the fill week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.
Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked parttime are classified as employed. If they looked for work they are classified as unemployed.
(Estimates in thousands)

(1) Excludes innates of institutions, members of the armed services, Incians living on reserves and residents of the Yukon and Northwest Territories.
(2) The labour forco as a percentage of the population $1_{4}$ years of age and over.
(3) The uncmployed as a percentage of the labour force.
r Revised.
Note: With the exception of Tables 2 and 5, all statistics refer to a specific week, the last day of which is indicated.

(1) Fomerly termed ".inthout jobs and seeking work".

Less than 10,000.

## (a) Non-sampline Variability

The data obtained by enumeration, either of the entire population or of a sample of it, will differ in some degree from the true data as outlined by the definitions because of enumerator and respondent variations. The amount of variance associated with these factors differs with the nature of the inguiry. In general, the more personal and more subjective inquiries are subjact to greater error.

## (b) Sampling Variability

In addition to non-sampling error, mentioned in subgection (a), the survey results are subject to sampling variability, While for the non-sanuling component of error atatistical estinates of its magitude are not avallable, ostimates of the probable range of the sampling component of error have been calculated. Estinates of the sampling varlablilty for speciried sizes of estimates in any morth are given in the table in the next colum.

The meabure of ampling variability as shown is twice the standard deviation; thus the odds are about 19 to 1 that the range (Lsbour Force Estimate $\pm$ Sampling Variability) containa the true estimates.

These estimates are averages since sampling variability differs from characteristic to characteristic and from month to month. In particular, for the unemployed and for persons workink from 1 to 34 hours, the sampling varlability is about 40 per cent highor than the general average and this higher varlabllity is shown in the table also.

These estimates of sampling variability camat be applied directiy to estimates of month-to-sonth change. However, studies indicate that tho sampling variability of a difference over a period of one month can be appro\%inated for the eraployed and for the unemployed using the following formula: ( 0.6 ) times (the square root of the sum of the squares of the sampling variabilities assoclated with the two estimates).

For example, suppose the estimates of employed persons in June and July, were $6,139,000$ and $6,262,000$
renpectively, whth ampling variabilities of about 61,000 each. The difference between these two estimatos ( 123,000 ) would have a sampling variability of approximately:

$$
0.6 \sqrt{61,000^{2}+61,000^{2}} \text { or about } 52,000
$$

For "the unemployed", suppose the corresponding estimates for June and July were 315,000 and 330,000 with saupling variatilities of about 28,000 . The difference between these two estimates ( 15,000 ) would have a sampling variability of approximatelv:

$$
0.6 \sqrt{28,000^{2}+28,000^{2}} \text { or about } 24,000
$$

Escimated sampline, variablisty for the najor labour force characteristics by size of estimate

| Size of estinate | General axmiling variability |  | $\begin{gathered} \text { General sampling } \\ \text { variability } \\ +40 \% \text { (I) } \end{gathered}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Size | Per cent | Slue | Per cent |
| 10,000 | 3,500 | 35.0 | 5,000 | $50 . \mathrm{C}$ |
| 25,000 | 5,500 | 22.0 | 7,500 | 30.0 |
| 50,000 | 8,000 | 16.C | 11,000 | 22.0 |
| 75,000 | 9,500 | 12.7 | 13,500 | 18.0 |
| 100,000 | 21,000 | 11.0 | 15,500 | $\therefore=.9$ |
| 250,000 | 27,500 | 7.0 | 24,500 | 4.8 |
| 500,000 | 24,000 | 4.8 |  | 6.7 |
| 750,000 | 28,500 | 3.8 | 40,000 | 5.3 |
| 1,000,000 | 33,000 | 3.3 | 46,000 | 4.6 |
| 2,500,000 | 49,000 | 2.0 |  |  |
| 5,000,000 | 58,000 | 1.2 |  |  |
| 6,000,000 | 60,000 | 1.c |  |  |

(1) Applicable to the unemployed and to persons workding 1 to 34 hours.
