## THE LABOUR FORCE <br> OCTOBER 1966

The Canadian labour force was estimated at $7,519,000$ in the week ended October 15, 1966. Of this total, 7,324,000 persons were employed for all or part of week and 195,000 were unemployed for the whole week. There was little change from September in the labour force, the employed and the unemployed. The labour force was 340,000 higher than in October 1965 ; the number of employed was up 316,000, and the unemployed was 24,000 higher.

Between September and October, employment in agriculture dropped by 42,000 while in non-agriculture, employment increased by 55,000. Compared with October 1965, employment
in non-agricultural industries was higher by 387,000 and agricultural employment was 71,000 lower. There was virtually no change in the number of men and women employed between September and October. In October this year, there were 139,000 more men and 177,000 more women employed than in October 1965.

The unemployment rate, expressed as a percentage of the total labour force, was 2.6 in October, compared with rates of 2.7 in September and 2.4 in October 1965. Seasonally adjusted, the unemployment rate was 3.5 in October 1966.

## Third Quarter Review of the Labour Forge <br> 1965-1966

In the third quarter of 1966 , the average number of persons in the labour force was $7,703,000$, an increase of 322,000 from the corresponding quarter of 1965. Employment at 7,477,000 was 306,000 higher and unemployment at 226,000 was $16,000 \mathrm{higher}$ than a year earlier.

## $\frac{\text { Third Quarter Averages }}{(000 \text { 's })}$

|  | $\underline{1966}$ | $\underline{1965}$ |
| :---: | ---: | ---: |
| Labour Force | 7,703 | 7,381 |
| Employment | 7,477 | 7,171 |
| Unemployment | 226 | 210 |

In the third quarter of 1966, the Canadian labour force was 322,000 , or 4.4 per cent, higher than a year earlier. In both absolute and relative terms, this was the largest year-to-year increase of the post-war period. Young persons under twenty-five years of age accounted for almost half of this gain.

The number of women in the labour force in the third quarter of 1966 was 190,000 , or 8.9 per cent, greater than in the corresponding quarter of 1965. This increase in the labour force for women was the largest on record. Married women in the labour force numbered 1,169,000, an increase of 104,000 from the third quarter of 1965.

The male labour force in the third quarter of 1966 was $132,000 \mathrm{higher}$ than in the corresponding quarter of the previous year. This increase of 2.5 per cent is substantially greater than the ten-year annual average of 1.5 per cent.

|  | Third Quarter Averages |  | Year-to-year Increase |  |
| :---: | :---: | :---: | :---: | :---: |
|  | (000's) |  | (000's) | \% |
|  | 1966 | 1965 |  |  |
| Men |  |  |  |  |
| All ages | 5,389 | 5,257 | 132 | 2.5 |
| 14-19 | 565 | 547 | 18 | 3.3 |
| 20-24 | 657 | 612 | 45 | 7.4 |
| 25-44 | 2,360 | 2,328 | 32 | 1.4 |
| $45+$ | 1,807 | 1,770 | 37 | 2.1 |
| Women |  |  |  |  |
| All ages | 2,314 | 2,124 | 190 | 8.9 |
| 14-19 | 417 | 379 | 38 | 10.0 |
| 20-24 | 403 | 357 | 46 | 12.9 |
| 25-44 | 838 | 784 | 54 | 6.9 |
| $45+$ | 656 | 604 | 52 | 8.6 |

Total employment in the third quarter of 1966 was 4.3 per cent higher than in the third quarter of 1965. This was the fourth consecutive quarter in which the year-to-year gain was more than 4 per cent. Male employment was higher by 2.5 per cent and female employment by 8.6 per cent.

Employment in the third quarter was highes in 1966 than in 1965 for all regions, gains ranging between 1.8 per cent for the Prairies and 6.6 per cent in British Columbia.

## Employment by Region

| Third Quarter <br> Averages |  | Percentage <br> Increase |
| :---: | :---: | :---: |
| $(0001$ s) |  |  |
| $\underline{1966}$ | $\underline{1965}$ |  |
| 2,104 | 1,991 | 2.4 |
| 2,745 | 2,634 | 4.7 |
| 1,283 | 1,260 | 1.8 |
| 715 | 671 | 6.6 |

Most of the increase in employment from a year earlier was in community, personal and other service and in manufacturing. The relatively small increase in the goodsproducing sector is related to the decline in employment in agriculture and other primary industries. The goods-producing sector, excluding agriculture, shows a year-to-year gain of 4.2 per cent.

In service and in manufacturing the year-toyear gains were 66,000 and 76,000 , respectively, for then and 118,000 and $2 \mathrm{~h}, 000$. respectively. For: women.

## Employment be 1nduatry

| Trade | 1,197 | 1,159 | + 38 | + | 3.3 |
| Finance | 306 | 289 | + 17 | $+$ | 5.9 |
| Community, personal \& other service | 1,645 | 1,463 | + 182 | + | 12.4 |
| Public administration | 436 | 430 | $+6$ | + | 1. |

In the quarter under review, total unempleyment averaged 226,000 as compared to 210,000 ir the third quarter of 1965 .

## Technical Notes

## Scope of Labour Force Survey

The statistics contained in this report are based on information obtained through a sample survey of households. Interviews are carried out in nearly 35,000 households chosen by area sampling methods across the country. Percentages of total households selected for the sample were as follows: Atlantic region, $1.6 \mathrm{p} . \mathrm{c}$.; Quebec, $0.5 \mathrm{p.c}$. ; Ontario, $0.5 \mathrm{p} . \mathrm{c} . ;$ Praitie region, $0.8 \mathrm{p} . \mathrm{c}$.; British Columbia, 0.7 p.c. The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. Since chen it has been carried out monthly. Estimates of employment, unemployment and non-labour force activity refer to the specific week covered by the survey each month.

The sample used in the surveys of the labour force has been designed to represent all persons in the population 14 years of age and over residing in Canada, with the exception of: residents of the Yukon and Northwest Territories, Indians living on reserves, inmates of institutions and members of the armed forces. These excluded categories amount to about three per cent of the total population 14 years of age and over.

Estimates derived from a sample survey are subject to sampling and non-sampling errors. Aspects of this subject in relation to the Labour Force Survey are reviewed under "Reliability of Estimates" on page 8.

## Labour Force Statistics

Contents of the Tables - The results of the survey are presented in the tables on pages 4 to 7 of this report.

Canada, Labour Force (pages 4 and 5). Tables 1 to 3 refer to the labour force, employment and unemployment and contain labour force participation and unemployment rates. Canada, Employed (page 6). Tables 4 to 6 contain Eurther detail on employment. Canada, Unemployed (page 7). Table 7 contains further detail on unemployment. Regions, Labour Force (page 7). Table 8 contains labour force data for the regions.
Supplementary Data - From time to time, Additional data on particular aspects of the labour force or its components will be abtained. Such material, as it becomes available, will be either included in this report or released in separate reports.

Other Data Available - In addition to the published statistics, there is a considerable amount of data which can be obtained on request. Following is a list of material available.

For Canada only:

1. Age and sex distributions.
2. Marital status and sex distributions.
3. Employed -
(a) Reasons for working less than full-time.
(b) Hours worked by sex for total employed, agriculture and non-agriculture, and for paid workers, non-agriculture.
(c) Industry and occupation groups, by sex for total employed and for paid workers.
4. Persons not in the labour force by category.

## For regions:

5. Labour force: by age; by sex, agricultural and nonagricultural.
Employed: by age.

## For individual provinces of Atlantic and Prairie regions:

6. Population 14 years of age and over and labour force: by sex.
Total employed, total unemployed, and total persons not in labour force.

## Definitions and Explanations

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week:
(a) did any work for pay or profit;
(b) did any work which contributed to the running of a farm or business operated by a related member of the household; or
(c) had a fob, but were not at work, because of bed weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons.
Persons who had jobs but did not work during the reference week and who also looked for work are Included in the unemployed as persons without rork and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week:
(a) were without work and seeking work, i.e., did no work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or
(b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.
Not in the Labour Force. Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: golng to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

Note: Due to the introduction of revised weighting factors in March 1965 , small adjustments have been made to estimates published before that time. See the March 1965 edition of this report, page 8.

(1) "S.D." = Standard deviation. For explanation, see "Reliability of Estimates", page 8. (2) In October 1964, 1965 and 1966, an unusually large number worked less than 35 hours due to Thanksgiving Ue; being in the reference week. (3) Economic reasons for not working 35 hours or more include short time, layoff for part of the week and termination or start of employment during the week. (4) 0ther reasons for not working 35 hours or more include illness, bad weather, industrial dispute, vacation, and reasons such as a statutory holiday in the week. Note: The alphabetic symbol following each estimate in table 6 indicates its standard deviation. For explanation, see "Reliability of Estimates", page 8.

Note: Due to the introduction of revised weighting factors in March 1965, small adjustments have been made to estimates published before that time.
See the March 1965 edition of this report, page 8.

(1) "S.D." = Standard deviation. For explanation, see "Reliability of Estimates", page 8.

Note: The alphabetic symbol following each estimate in table 8 indicates its standard deviation. For explanation, see "Reliability of Estimates", page 8 .

## Rellability of Estimates

## (a) Sampling Error

The eatimates in this report are based on a sample of households. Somewhat different figures might have been obtained if a complete census hed been taken using the same questionnaires, enumerators, supervisors, processing, etc. as those actually used in the Labour Potce Survey. This difference is called the sampling error of the estimates. In the design and processing of the Labour Force Survey extensive efforts have been made to minimize the sampling error. The sampling error (expressed as a per cent of the estimate it refers to) is not the same for all astimates; of two estimates the larger one will likely have a smaller per cent sampling error and of two estimates of the same size the one referring to a characteristic more evenly distributed across the country will tend to have a smaller per cent sampling variability. Also, estimates relating to age and sex are usually more relfable than other estimates of comparable size.

## (b) Non-8ampling Errors

Errors, which are not related to sampling, may occur at almost every phase of a survey operation. Enumerators may misunderstand instructions, respondents may make errors in answering questions, the answers may be incorrectly entered on the questionnaites and ertors may be introduced in the processing and tabulations of the data. All theae ertors are called non-sampling errors. Some of the non-sampling errors will usually balance out over a large number of observacions but systematically occuring errots will contribute to blases. Non-sampling errors can be reduced by a careful design of questionnaires, intensive training and supervision of enumerators and a thorough control of the processing opera* tion. In general, the more persomal and more subjective inquiries are subject to larger errors. Also, data referring co persons with less stable labour force status will have relatively large non-sampling errora.

## (c) Alphabetic Indicators of Standard Deviation

The sampling error, as described under (a) is not known. A quantity, called the standard deviacion, can however be estimated from sample data itself. The standard deviation of an estimate is a statistical messure of its sampling error. It also partially measures the effect of non-sampling errors, but does not reflect ny systematic biases in the data. The chances are about 68 out of 100 that the difference between a sample estimate and the corresponding census figure would be less than the standard deviation. The chancea are about 95 out of 100 that the difference would be less than twice the standard deviation and about 99 out of 100 thet it would be less than $21 / 2$ times as large.

The standard deviations of the estimates, expressed as a per cent of the estimates, are indicated by letters. The letter " $a^{\text {" }}$ indicates that the standard deviation is smalier
then $0.5 \%$ of the wsimate, the thecu: "b" indicates that the standard deviation is between $0.6 \%$ and $1.0 \%$ of the estimate and so on se shown in the table below.

Alphabetic designation of per cent standard deviations
Alphabetic indicator Per cent atandard deviation

The actual standard deviation of an estimate is not the same each month. SInce the standsrd deviations of the current estimntes are not avallable at the time when this report is published, the slphabetic indicators are based on the average atandard deviatione during the last year. They should, therefore, be interpreted only as indications of the order of magnitude of the standard deviations.

## (d) Standard Deviation of Month-to-Month Chanses

A rough upper 11mit for the standard devtation of the difference (change) between two estimates referring to two months up to a year apart may also be indicated using the table above. For most characteristics published in this report the standard deviation of the difference between two estimates is likely to be somewhat smaller than the standard deviation of the smaller of the two estimates or in the for mediately preceding range.

For example, suppose that a hypothetical entimate in May and June was 513,000 and 625,000 respectively and the per cent standard deviation of both estimates was indicated by the letter "c", 1.e. it was between $1.1 \%$ and $2,5 \%$. The ifference between the May and June estimates $(112,000)$ would, therefore, have a atandard deviation which would likely be smaller than $2.5 \%$ of 513,000 , i.e. it would likely be smaller than 12,800 .

## (e) Current 8stimates of Standard Deviations

Standard deviations are computed monchly for several escimates and month-to-month changes. These are available usually in a fet weeks after the publication of this report and can be obtained on request. Beginning with 1966, an annual report on the standard deviations during the last year will be released.

## Third Quarter Review of the Labour Force 1965-1966 (continued from page 2)

For men, the unemployment rate was unchanged from a year earlier; for women it was slightly higher.

Unemployment and Unemployment Rates Third Quarter Averages

Unemployment
Unemployment (000's)
$1966 \quad 1965$
$226 \quad 210$
$163 \quad 158$
Men
63
52
$\frac{\text { Rates }}{\%}$
$1966 \quad 1965$
$2.9 \quad 2.8$
$3.0 \quad 3.0$
2.72 .4

There was little change in unemployment rates from a year earlier in the Atlantic, Quebec and Prairie regions. Rates were slightly higher in Ontario and British Columbia.

## Unemployment Rates by Region <br> Third Quarter Averages

|  | 1966 | 1965 |
| :--- | :--- | :--- |
| Atlant1c | 4.1 | 4.2 |
| Quebec | 3.8 | 4.0 |
| Ontarlo | 2.5 | 2.1 |
| Prairies | 1.4 | 1.6 |
| B.C | 3.8 | 3.3 |
