## OTTAWA - CANADA

Published by Authority of the Mirtister nof Trade and Commerce

THE LABOUR FORCE OCTOBER 1968

ment in nomogrieuttural iHdustries was higher by 296,000 and agricultural employment was 26,000 lower. Employment among women increased by 18,000 from September, while the number of employed men decreased by 20,000 . In October this year, there were 121,000 more men and 149,000 more women employed than in October 1967.

The unemployment rate, expressed as a percentage of the labour force, was 3.6 in October, compared with rates of 3.3 in September and 3.3 in October 1967. Seasonally adjusted, the unemployment rate was 5.1 in October 1968. ment in agriculture dropped by 28,000 while in non-agriculture, employment increased by 26,000. Compared with October 1967, employ-

LABOUR FORCE, EMPLOYMENT AND UNEMPLOYMENT
IN CANADA

ACTUAL AND SEASONALLY ADJUSTED

## Third Quarter Review of the Labour Forea <br> 1967-1968

In the third quarter of 1968 , the average number of persons in the labour force was $8,193,000$, an increase of 208,000 from the corresponding quarter of 1967. Employment at 7,875,000 was 140,000 higher and unemployment at 317,000 was $67,000 \mathrm{higher}$ than a year earlier.

## $\frac{\text { Third } Q u a r t e r ~ A v e r a g e s ~}{(0001 \mathrm{~s})}$ <br> ( 000 's)

|  | $\underline{1968}$ | $\underline{1967}$ |
| :---: | ---: | ---: |
| Labour Force | 8,193 | $\mathbf{7 , 9 8 5}$ |
| Employment | 7,875 | 7,735 |
| Unemployment | 317 | 250 |

The Canadian labour force in the third quarter of 1968 was 2.6 per cent greater than in the corresponding quarter of 1967 , a rate of increase slightly smaller than the annual average gain of the preceding five years.

Men and women shared almost equally in the increase in the total labour force from a year earlier. However, the percentage increase remains considerably higher for women than for men. Of the total increase in the female labour force, married women accounted for 82 per cent.

For both men and women, the largest year-to-year percentage gains in the labour force were among persons 20-24 years of age. For teenagers there was little change from the corresponding quarter of last year.

## The Labour Force

| :---: | :---: | :---: | :---: | :---: |
|  | 1968 | 1967 |  |  |
| Men |  |  |  |  |
| All ages | 5,651 | 5,549 | +102 | + 1.8 |
| 14-19 | 586 | 597 | - 11 | - 1.8 |
| 20-24 | 739 | 700 | + 39 | + 5.6 |
| 25-44 | 2,448 | 2,410 | + 38 | + 1.6 |
| 45 and over | 1,878 | 1,843 | + 35 | $+1.9$ |
| Married | 4,083 | 4,005 | + 78 | + 1.9 |
| Other | 1,568 | 1,545 | + 23 | $+1.5$ |
| Homen |  |  |  |  |
| All ages | 2,542 | 2,436 | +106 | $+4.4$ |
| 14-19 | 427 | 431 | - 4 | -0.9 |
| 20-24 | 487 | 434 | + 53 | +12.2 |
| 25-44 | 913 | 889 | + 24 | + 2.7 |
| 45 and over | 714 | 682 | + 32 | $+4.7$ |
| Married | 1,355 | 1,268 | + 87 | + 6.9 |
| Other | 1,187 | 1,168 | + 19 | + 1.6 |

In the third quarter of 1968 , total employment was 1.8 per cent higher, male employment
1.1 per cent higher and female employment 3.5 per cent higher than in the third quarter of 1967. Corresponding average annual rates of increase for the period 1962-1967 were 3.4 per cent,
2.5 per cent and 5.6 per cent, respectively.

Exployment in the gosas-proancing sector continued to show no year-to-year gain. Agricultural employment was 36,000 lower than in tive third quarter of 1967.

In the service-producing sector, employment was 160,000 above 1967 third-quarter levels; community, personal and other service accounted for 104,000 of the increase.

Employment by Industry Sector and Sex

|  | Third Quarter $\frac{\text { Averages }}{\text { (00n's) }}$ |  | $\begin{aligned} & \text { Year-to-Year } \\ & \frac{\text { Change }}{\left(000^{\prime} \mathrm{s}\right)} \% \end{aligned}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1968 | 1967 |  |  |
| Goods-producing | 3,227 | 3,247 | - 20 | -0.6 |
| Men | 2,699 | 2,708 | - | -0.3 |

| Women | 1,923 | 1,829 | + 94 | +5.1 |

Occupationally, the largest year-to-year gains in employment from the third-quarter of 1967 were among professionals (91,000), clerical workers ( 55,000 ) and managerial occupations (27,000). Farmers and farm workers accounted for 44,000 of the total dacilae in maplaymsit is the primary occupations.

Employmenc by Occupation

(1) Includes farming, fishing, trapping, logging, and mining occupations.
(2) Includes labourers and unskilled workers atot farming, fishing, logging, or mining.

## Technical Notes <br> Scope of Labour Force Survey

The statistics contained in this report are based on information obtained through a $s$ ample survey of households. Interviews are carried out in nearly 30,000 households chosen by area sampling methods across the country. Percentages of total households selected for the sample were as follows: Atlantic region, 1.6 p.c.; Quebec, 0.5 p.c.; Ontario, 0.5 p.c.; Prairie region, $0.8 \mathrm{p.c}$. British Columbia, 0.7 p.c. The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. Since then it has been carried out monthly. Estimates of employment, unemployment and non-labour force activity refer to the specific week covered by the survey each month.

The sample used in the surveys of the labour force has been designed to represent all persons in the population 14 years of age and over residing in Canada, with the exception of: residents of the Yukon and Northwest Territories, Indians living on reserves, inmates of institutions and members of the armed forces. These excluded categories amount to about three per cent of the total population 14 years of age and over.

Estimates derived from a sample survey are subject to sampling and non-sampling errors. Aspects of this subject in relation to the Labour Force Survey are reviewed under "Reliability of Estimates" on page 8.

## Labour Force Statistics

Contents of the Tables - The results of the survey are presented in the tables on pages 4 to 7 of this report.

Canada, Labour Force (papes 4 and 5). Tables 1 to 3 refer to the labour force, employment and unemployment and contain labour force participation and unemployment rates.

Canada, Employed (page 6). Tables 4 to 6 contain further detail on employment.

Canada, Unemployed (page 7). Table 7 contains further detail on unemployment.

Regions, Labour Force (page 7). Table 8 contains labour force data for the regions.

Supplementary Data - From time to time, additional data on particular aspects of the labour force or its components will be obtained. Such material, as it becomes available, will be either included in this report or released in separate reports.

Other Data Available - In addition to the published statistics, there is a considerable amount of data which can be obtained on request. Following is a list of material available.

## For Canad a only:

1. Age and sex distributions.
2. Marital status and sex distributions.
3. Employed -
(a) Reasons for working less than full-time.
(b) Hours worked by sex for total employed, agriculture and non-agriculture, and for paid workers, non-agriculture.
(c) Industry and occupation groups, by sex for total employed and for paid workers.
4. Persons not in the labour force by category.

## For regions:

5. Labour force: by age; by sex, agricultural and nonagricultural.
Employed: by age.

## For individual provinces of Atlantic and Prairie regions:

6. Population 14 years of age and over and labour force: by sex.
Total employed, total unemployed, and total persons not in labour force.

## Definitions and Explanations

Labour Force - The civilian labour force is composed of that portion of the civilian noninstitutional population 14 years of age and over who, during the reference week, were employed or unemployed.

Employed - The employed includes all persons who, during the reference week:
(a) did any work for pay or profit;
(b) did any work which contributed to the running of a farm or business operated by a related member of the household; or
(c) had a job, but were not at work, because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons.
Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed - The unemployed includes all persons who, through the reference week:
(a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was avallable in the communty; or
(b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been lald off for less than 30 days.

Not in the Labour Force - Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

Note: Due to the introduction of revised weighting factors in March 1965 , small adjustments have been made to estimates published before that time. See the March 1965 edition of this report, page 8.

Note: Since late 1962, statistics in Table 5 have been published on a 3-month average basis. However since January 1966, it has been possible to provide monthly estimates of the employed by industry. Accordingly, beginning with the February 1968 report, the statistics in Table 5 refer to the monthly reference periods. Industry estimates on the 3 -month average basis are available on request from the Special Surveys Division.

(1) "S.D." = Standard deviation. For explanation, see "Reliability of Estimates", page 8. (2) In October 1966, 1967 and 1968, an unusually large number worked less than 35 hours due to Thanksgiving Dey being in the reference week. (3) Economic reasons for not working 35 hours or more include short time, layoff for part of the week and termination or start of employment during the week. (4) 0ther reasons for not working 35 hours or more include illness, bad weather, industrial dispute, vacation, and reasons such as a statutory holiday in the week. Note: The alphabetic symbol following each estimate in table 6 indicates its standard deviation. For explanation, see "Reliability of Estimates", page 8.

Note: Due to the introduction of revised weighting factors in March 1965, small adjustments have been made to estimates published before that time. See the March 1965 edition of this report, page 8.

(1) "S.D." = Standard deviation. For explanation, see "Reliability of Estimates", page 8.

Note: The alphabetic symbol following each estimate in table 8 indicates its standard deviation. For explanation, see "Reliability of Estimates", page 8.

## (8) <br> Sampling Error

The estimates in this report are based on a sample of households. Somewhat different figures might have been obtained if complete census had been taken using the same questionnaires, enumerstors, supervisors, processing, etc. as those actusily used in the Labour Force Survey. This difference is called the sampling error of the eatimates. In the design and processing of the Labour Force Survey extensive efforts have been made to minimize the sampling error. The sampling error (expressed as a per cent of the estimate it refers to) is not the same for all estimates; of two estimates the larger one will likely have a smaller per cent sampling error and of two estimates of the same sise the one referifig to a characteristic more evenly distri. buted across the country will tend to have a smaller per cent sampling variability. Also, estimates relating to age and sex are usually more reliable than other estimates of comparable size.
(b) Non-sampling Errors

Errors, Which are not related to sampling, may occur at almost every phase of a survey operation. Enumerators may wisunderstand instructions, respondents may make errors in answering questions, the answers may be incorrectly entered on the questionnaires and errors may be introduced in the processing and tabulations of the data. All these errors are called non-sampling errors. Some of the non-sampling errors will usually balance out over a large number of observations but systemstically occuring errors will contribute to biases. Non-sampling errors can be reduced by a careful dealgn of questionnaires, Intensive trsining and supervision of enumerators and a chorough control of the processing operation. In general, the more personal and more subjective inquiries are subject to larger errors. Also, data referring to persons with leas stable labour force $8 t a t u s$ will have relatively large non-sampling errors.

## (c) Alphaberic Indicators of Standard Deviation

The sampling error, an described under (a) is not known. A quantity, called the standard deviation, can however be estimated from sample data itself. The standard deviation of an estimate is a statistical measure of its sampling error. It also partially measures the effect on non-sampling errors, but does not reflect any systemstic biases in the data. The chances are about 68 out of 100 that the difference between a ample eatimate and the corresponding census figure would be less than the standard deviation. The chances are about 95 out of 100 that the difference would be less than twice the standard deviation and about 99 out of 100 that it would be less than $21 / 2$ times as large.

Tbe standard deviations of the estimates, expressed as a per cent of the estimates, are indicated by letters. The letter "a" indicates that the standard deviation is smaller

## 

than $0.5 \%$ of the estimate, the letter "b" Indlcates that the standard deviation is between $0.6 \%$ and $1.0 \%$ of the estimate and so on as show in the table below.

Alphabetic designation of per cent standard deviations
Alphabetic indicator Per cent standard deviation

| a | $0.0 \%-0.5 \%$ |
| :--- | ---: |
| b | $0.6 \%-1.0 \%$ |
| c | $1.1 \%-2.5 \%$ |
| d | $2.6 \%-5.0 \%$ |
| f | $5.1 \%-10.0 \%$ |
| e | $10.1 \%-15.0 \%$ |

The actual standard deviation of an estimate is nat the same each month. Since the standard deviations of the current estimates are not available at the time when this re. port is published, the alphabetic indicators are based on the average standard deviations during the last year. They should, therefore, be interpreted only as indications of the order of magnitude of the standard deviations.

## (d) Standard Deviation of Month-to-Month Changes

A rough upper limit for the standard deviation of the difference (change) between two estimates referring to two months up to a year apart may also be indicated using the table above. For most characterdstics published in this report the standard deviation of the difference between two estimates is likuly to be somewhet maller than the standard deviation of the smaller of the two efimates or in the immediately preceding range.

For example, suppose that a hypothetical eatimate in May and June was $\$ 13,000$ and 625,000 reapectively and the per cent standard deviation of both estimates was indicated by the letter " $c$ ", 1.e. it was between $1.1 \%$ and $2.5 \%$. The difference between the May and June estimates (112,000) would, therefore, have a standsrd deviation which would likely be smaller chan $2.5 \%$ of 513,000 , 1.e. it would likely be smaller than 12,800 .
(e) Current Estimates of Standard Deviations

Standard deviations are compured monthly for several estimates and month-to-month changes. These are avallable usually in a few weeks after the publication of this report and can be obtained on request. Beginning with 1966, an annual report on the standard deviations during the last year will be relessed.

## Third Quarter Review of the Labour Force 1967-1968 (continued from page 2)

The largest relative increase in employment from a year earlier was in British Columbia (3.4 per cent), the Prairies ( 3.0 per cent) and Ontario (2.7 per cent). In the Atlantic region and in Quebec there was little change.

Total unemployment in the third quarter of 1968, at 317,000 , was 67,000 higher than in the third quarter of 1967 . There were 44,000 more men and 23,000 more women unemployed than a year earlier.

Comparing third quarters, unemployment was higher in 1968 than in 1967 for all regions. Unemployment rates were substantially higher than the national average for the Atlantic region, Quebec and British Columbia.

## Unemployment and Unemployment Rates by Region Third Quarter Averages

## $\frac{\text { Unemployment }}{\left(000^{\prime} \mathrm{s}\right)} \quad \frac{\text { Unemployment Rates }}{\%}$

|  | 1968 | 1967 | 1968 | 1967 |
| :---: | :---: | :---: | :---: | :---: |
| Atl antic | 33 | 26 | 4.9 | 3.9 |
| Quebec | 118 | 92 | 5.1 | 4.0 |
| Ontario | 94 | 81 | 3.1 | 2.8 |
| Prairies | 33 | 21 | 2.4 | 1.6 |
| B.C. | 40 | 30 | 4.9 | 3.8 |
