HISTORICAL LABOUR FORCE STATISTICS—  
ACTUAL DATA, SEASONAL FACTORS  
SEASONALLY ADJUSTED DATA

---

STATISTIQUES CHRONOLOGIQUES SUR LA POPULATION  
ACTIVE—CHIFFRES RÉELS, FACTEURS SAISONNIERS  
ET DONNÉES DÉSAISONNALISÉES

1976

NOTE TO USERS

Due to substantial revisions to the Labour Force Survey, this publication was not produced for 1975. For further information contact Labour Force Survey Division, Statistics Canada.

AVIS AUX UTILISATEURS

Cette publication n'a pas été produite pour l'année 1975, à cause des profondes modifications apportées à l'enquête sur la population active. On peut obtenir plus de renseignements en s'adressant à la Division de l'enquête sur la population active, Statistique Canada.

## INTRODUCTION

Each year, Statistics Canada publishes a selection of historical labour force statistics and related seasonal adjustment information. This issue presents the monthly unadjusted and adjusted estimates up to the end of 1976 and forecast seasonal factors for 1977.

The statistics contained in this report are based on information obtained through a sample survey of households. In January 1976, interviews were carried out in about 30,000 representative households across the country. However, during the period January 1976 - March 1977, an increase in sample size to approximately 55,000 households is being implemented.

The sample has been designed to represent all persons 15 years of age and over residing in Canada, with the following exceptions: residents of the Yukon and Northwest Territories, persons living on Indian reserves, inmates of institutions, and full-time members of the armed forces. These exclusions amount to about 2 % of the total population 15 years of age and over.

Estimates derived from a sample survey are subject to sampling and non-sampling errors. Descriptions of sampling procedures, as well as concepts and definitions relating to the Labour Force Survey, may be obtained by referring to the monthly publication The Labour Force (Statistics Canada, Catalogue 71-001). A more detailed description of the survey methodology is available on request from the Labour Force Survey Division, Statistics Canada.

## INTRODUCTION

Chaque année, Statistique Canada publie un recueil de statistiques chronologiques sur la population active ainsi que les données de désaisonnalisation qui s'y rapportent. La présente édition regroupe les estimations mensuelles, chiffres réels et données désaisonnalisées jusqu'à la fin de 1976 et les facteurs saisonniers de prévision pour 1977.

Les statistiques publiées ici sont fondées sur une enquête mensuelle menée auprès d'environ 30,000 ménages représentatifs dans tout le pays. Cependant, la taille de l'échantillon est augmentée tout au long de la période allant de janvier 1976 à mars 1977. Donc, de 30,000 ménages qu'il était en janvier 1976, l'échantillon comprendra environ 55,000 ménages au mois de mars 1977.

L'échantillon a été conçu de façon à représenter toutes les personnes âgées de 15 ans et plus qui résident au Canada, exception faite des résidents du Yukon et des Territoires du Nord-Ouest, des personnes vivant dans des réserves indiennes, des pensionnaires d'institutions et des membres à plein temps des Forces armées. Ces catégories exclues représentent environ 2 % de la population totale âgée de 15 ans et plus.

Les estimations tirées d'une enquête par échantillon sont sujettes aux erreurs d'échantillonnage et à d'autres erreurs. Les différents aspects de cette question ainsi que les définitions et les explications relatives à l'enquête sur la population active se trouvent dans la publication mensuelle intitulée La population active (71-001 au catalogue de Statistique Canada). Une description plus détaillée de la méthodologie de l'enquête est disponible sur demande à la Division de l'enquête sur la population active de Statistique Canada.

The seasonally-adjusted series in this publication have been derived using the X-11 version of the United States Bureau of the Census Method II Seasonal Adjustment Computer Program<sup>1</sup>.

Statistics Canada has developed a modification to the seasonal adjustment process<sup>2</sup> designed to improve the accuracy of seasonal factor forecasts for a number of labour force series. The modification consists of one year projections to the unadjusted data. These projections for the forthcoming year are generated through the use of ARIMA (auto-regressive integrated moving average) models of the Box and Jenkins type. This extended data is then used as input to the seasonal adjustment program. As well, for some series, it has been determined that the additive version of the X-11 more closely reflects their seasonal properties. A technical description of the procedures used is available from the Labour Force Survey Division or the Time Series and Seasonal Adjustment Staff, Statistics Canada.

Labour force data is seasonally-adjusted using the following techniques:

- (a) ARIMA models and the multiplicative version of the X-11: Canada employed men 15-24 and 25 and over; Canada unemployed men 15-24 and 25 and over; and Canada employed women 15-24 and 25 and over.
- (b) ARIMA models and the additive version of the X-11: Canada unemployed women 15-24 and 25 and over.
- (c) The Multiplicative X-11 - all other series.

1. For a description of the technique see U.S. Bureau of the Census Technical Paper No. 15, The X-11 Variant of the Census Method II Seasonal Adjustment Program.

2. This technique is called Statistics Canada X-11 - ARIMA.

Les séries désaisonnalisées ont été traitées à l'aide de la version X-11 du "United States Bureau of the Census Method II Seasonal Adjustment Computer Program"<sup>1</sup>.

Statistique Canada a apporté une modification au processus de désaisonnalisation<sup>2</sup> dans le but d'améliorer l'exactitude des prévisions de facteurs saisonniers pour certaines séries sur la population active. La modification consiste en projections d'une année des données non désaisonnalisées. Ces projections pour l'année à venir sont obtenues par l'emploi de modèles A.R.M.M.I. (modèles autorégressifs et de moyenne mobile intégrée) du type Box et Jenkins, pour être, par la suite, utilisées par le programme de désaisonnalisation. Aussi pour certaines séries, l'application de la version additive X-11 démontre plus clairement leurs mouvements saisonniers. On peut se procurer une description technique des méthodes utilisées auprès de la Division de l'enquête sur la population active ou du Service des séries chronologiques et ajustement saisonnier, Statistique Canada.

La population active est désaisonnalisée utilisant les techniques suivantes:

- (a) A.R.M.M.I. modèles et la version multiplicative X-11: Canada, hommes occupés 15-24 ans et 25 et plus; Canada, hommes en chômage 15-24 ans et 25 et plus; Canada, femmes occupées 15-24 ans et 25 et plus.
- (b) A.R.M.M.I. modèles et la version additive X-11: Canada, femmes en chômage 15-24 ans et 25 et plus.
- (c) La version multiplicative X-11 pour toutes les autres séries.

1. On trouvera une description de la méthode en question dans le document suivant: U.S. Bureau of the Census Technical Paper No. 15, "The X-11 Variant of the Census Method II Seasonal Adjustment Program".

2. On nomme cette technique "A.R.M.M.I. X-11, Statistique Canada".

Input to the seasonal adjustment program for all series, with the exception of employment by industry in Section 2, pages 43 to 46, is monthly data from January 1966. Input for employment by industry is monthly from January 1970.

Seasonally-adjusted estimates of the labour force are obtained by summing seasonally-adjusted employment and seasonally-adjusted unemployment.

Canada and provincial total seasonally-adjusted employment and unemployment are derived by the summation of the appropriate, and where available, seasonally-adjusted figures for men 15-24, men 25 and over, women 15-24, and women 25 and over.

Seasonally-adjusted unemployment rates are the seasonally-adjusted unemployment levels expressed as a percent of the seasonally-adjusted labour force.

The seasonally-adjusted participation rates are the seasonally-adjusted labour force estimates (i.e. the sum of the seasonally-adjusted employment and unemployment levels) expressed as a percent of the population.

For each of the series in Section 1 to 5 of this publication, the following tables are presented:

1. The unadjusted data, rounded to thousands. (Unadjusted unemployment and participation rates are calculated using unrounded data.)
2. The final seasonally-adjusted series, rounded to thousands. (Seasonally-adjusted unemployment and participation rates are calculated using rounded, seasonally-adjusted data, except for some small series.)

Les données utilisées pour la désaisonnalisation de toutes les séries, à l'exception de l'emploi selon la branche d'activité dans la section 2, page 43 à 46, sont mensuelles depuis janvier 1966. Les données de l'emploi selon la branche d'activité sont mensuelles depuis janvier 1970.

Les estimations désaisonnalisées de la population active, sont obtenues par sommation de l'emploi désaisonnalisé et du chômage désaisonnalisé.

Les totaux désaisonnalisés de l'emploi, du chômage et de la population active du Canada et des provinces sont tirés de la somme des chiffres désaisonnalisés appropriés là où ils sont disponibles pour les hommes de 15-24 ans, les hommes de 25 et plus, les femmes de 15-24 ans et les femmes de 25 et plus.

Les taux de chômage désaisonnalisés sont les niveaux de chômage désaisonnalisés exprimés en pourcentage de la population active désaisonnalisée.

Les taux d'activité désaisonnalisés sont les estimations de la population active désaisonnalisée exprimés en pourcentage de la population.

Pour chaque série de données présentée dans les sections 1 à 5, on trouvera deux tableaux:

1. Les données non désaisonnalisées, arrondies aux milliers. (Les taux de chômage et d'activité non ajustés sont calculés à partir de chiffres non arrondis.)
2. La série finale des données désaisonnalisées, arrondie aux milliers. (Dans le cas des séries désaisonnalisées, les taux de chômage et d'activité sont calculés à partir de chiffres arrondis, sauf pour quelques séries moins considérables.)

In Sections 6 and 7, the following data are presented:

1. The final seasonal factors for those series which are seasonally-adjusted directly and the forecast seasonal factors for the 1977 calendar year.
2. The length of the MCD (months of cyclical dominance), where applicable. (The complete MCD tables are available on request.)

Seasonally-adjusted figures published in 71-001 are calculated on a current basis; that is, the seasonal adjustment program is run each month using data up to and including the most recent month. This process generates new forecast factors for the next twelve months. (These factors are available on request.) As in past years, there will be a revision of the seasonally-adjusted figures at the end of the calendar year, but it is expected that the resultant changes will be small since changes in seasonal patterns will have been taken into account on a current basis.

Dans les sections 6 et 7, les données suivantes sont présentées:

1. Les facteurs finals de désaisonnalisation pour les séries désaisonnalisées directement et les facteurs de prévision pour l'année 1977.
2. La durée du M.D.C. (mois de dominance cyclique) est donnée lorsque cela s'impose. (L'ensemble des tableaux M.D.C. est disponible sur demande.)

Les données désaisonnalisées publiées dans le 71-001 sont calculées sur une base courante. En d'autres termes, le programme de désaisonnalisation s'applique aux séries qui utilisent des données portant jusqu'au mois le plus récent inclusivement. De cette façon, on peut obtenir de nouveaux facteurs de prévision pour les prochains douze mois. (Ces facteurs sont disponibles sur demande.) Comme dans le passé, les données désaisonnalisées seront révisées à la fin de l'année civile, mais les variations ne seront pas aussi marquées, puisqu'on aura tenu compte des variations de la tendance saisonnière sur une base courante.
