Appendix A

Estimates for week ended June 3, 1950, including Manitoba.....	106
--	-----

INTRODUCTION

Since November, 1945, the Dominion Bureau of Statistics has conducted sample surveys to obtain data on the employment characteristics of the Canadian population. Until November, 1952, these surveys were carried out at approximately quarterly intervals, but since that date they have taken place each month. About 30,000 households, chosen by random area-sampling methods in some 115 different areas in Canada, are visited each month and information obtained for all persons 14 years of age and over. Persons are classified according to current activity or status during the specific week covered by the survey.

The final estimates are obtained by applying to the sample survey results weights based on

estimated totals of population, separately for age and sex groups in each province. These totals are derived from the official estimates of population based on latest census counts adjusted by the numbers of births, deaths, immigrants and emigrants for the intervening period.

Data for Canada as a whole are given in Tables 1 to 12, inclusive, Table 1 summarizing labour force characteristics and the remainder dealing with particular classifications. All regional estimates are brought together in Table 13. Definitions and explanations with reference to these tables are contained in the following sections.

COVERAGE

The sample used in the surveys of the labour force has been designed to include all persons 14 years of age and over who reside in Canada with certain specific exceptions. No estimates are made for: residents of the Yukon and Northwest Territories; members of the armed services; Indians on reservations; and inmates of institutions. The totals of persons 14 years of age and over shown for these categories in the 1951 Census were 17,000, 71,000, 62,000, and 117,000 respectively.

In the surveys preceding February, 1955, certain remote and relatively inaccessible areas of Canada were not included in the estimates. In May, 1954, the sample design was altered so that totals would include estimates for these areas in Ontario, although, for cost reasons, they were given no chance of selection for enumeration. In February, 1955, the sample design was altered so that estimates were included on the same basis for the remaining areas in Quebec, the Prairie Provinces and British Columbia. The present reference paper shows revised data for all surveys so that all estimates relate to the entire area of the ten provinces. The adjustment on estimates from November, 1945, to April, 1954, amounted to about 1.0%, and from May, 1954, to January, 1955, to about 0.4% for Canada as a whole.

The estimates in the bulletins for surveys in 1953, 1954 and January, 1955, are not strictly

comparable with those in Reference Paper No. 35 and bulletins to the end of 1952. In January, 1953, revisions were incorporated based upon new age and sex distributions obtained from the 1951 Census. The revisions have been incorporated in the estimates in the present reference paper.

For these reasons, the estimates in the present reference paper differ from those shown in the previous reference paper (No. 35), and in bulletins since that date. However, they form a consistent series from the first survey in November, 1945, to January, 1955, and monthly bulletins commencing with February, 1955, will be on the same basis.

In June, 1950, no interviewing was carried out in Manitoba due to flood conditions in the Red and Assiniboine Valleys, and all estimates for that month exclude Manitoba. A calculation has been made of what the estimates might have been if there had been no flooding and figures on this basis are shown in Appendix A.

In April, 1949, Newfoundland formally entered Confederation as the tenth province of Canada. However, it was not possible to include estimates for Newfoundland until October, 1949. Commencing with the survey for that month, Newfoundland has been included in the estimates for the country as a whole and is shown separately in the regional distributions.

DEFINITIONS

(a) Civilian labour force.

The civilian labour force is composed of that portion of the civilian non-institutional population 14 years of age and over who, during the survey week: did some work; had jobs but did no work; or did not have jobs and were seeking work.

(b) Persons with jobs and at work.

This category includes those who did any work during the survey week for pay or profit or who did unpaid work which contributed to the running of a farm or a business operated by a related member of the household.

A useful supplement to the estimates of persons with jobs and at work is provided in the distribution by hours worked, of those employed in agriculture and in non-agricultural industries, and also of paid workers in non-agricultural industries. While variations in the estimates of the total number of persons at work provide a valuable indicator of economic conditions, significant changes in employment may be concealed unless some attention is directed to the extent to which people worked less than full-time.

Further information concerning those who worked less than full-time is provided in the classification by the main reasons for working less than 35 hours. The categories are largely self-explanatory but the category "on short-time" may require further definition. This group includes those who worked with the same employer only some days of the work-week, or only some hours of the work-day. For example, due to a shortage of materials, the staff of a factory may be compelled to reduce the work-week from 40 to 25 hours, or the work-day from 8 to 5 hours. Thus, there is a continuous pattern of employment with the same employer without any work stoppage and the condition is temporary in nature.

In any enterprise operated by a related member of the household, it may be difficult to determine what portion of the work of an unpaid worker actually contributes to the operation of the enterprise and what portion contributes to the normal maintenance of the household. It has been found that this difficulty is confined for the most part to female unpaid family workers on farms who are reported as princi-

pally engaged in keeping house. To compensate for the over-reporting of hours in this group, the first 20 hours are considered to apply to household maintenance, and all subsequent work reported is considered to contribute to the operation of the enterprise. This adjustment is made at the processing level and applies only to farm housewives reporting unpaid work.

(c) Persons with jobs but not at work.

This category includes those who had jobs but did not work during the survey week because of vacation, illness, bad weather, industrial dispute or temporary lay-off. Persons who had jobs but did not work during the survey week and who also looked for work are included in III(d) below, "Persons without jobs and seeking work".

Persons on temporary lay-off are those who were laid off from their job with definite instructions to return to work within 30 days of the date of lay-off. If a person has no such instructions and is not working at some other job he is regarded as "without a job and seeking work" or as "voluntarily idle" depending upon the individual circumstances (see IV(a) below).

(d) Persons without jobs and seeking work.

This category includes those persons who, during the survey week, were looking for work and did no work. Persons who were temporarily away from their jobs during the whole of survey week and who were seeking work are considered as without jobs and are included in this category (see III(c) above).

In addition to those who actively looked for work, this classification includes persons who would have looked for work except that they: were temporarily ill; were on indefinite or prolonged lay-off and expected to be called back to their old jobs; or believed that no work was available.

(e) Persons not in the labour force.

The non-working part of the population 14 years of age and over consists of those who are outside the labour force in the sense that they are not working for pay or profit, or as unpaid workers in family

enterprises, nor are looking for work. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as "persons with jobs". If they were looking for work, they are classified as "persons without jobs and seeking work".

(f) Industry and occupation classifications.

The industry classifications used in this reference paper are those contained in The Standard Industrial Classification Manual of the Dominion Bureau of Statistics as used in the 1951 Census of Canada. The occupation classifications are those prepared for use in the 1951 Census of Canada.

RELIABILITY OF ESTIMATES

(a) Non-sampling Variability.

The data obtained by enumeration, either of the entire population or of a sample of it, will differ in some degree from the true data as outlined by the definitions because of enumerator and respondent variations. The principal elements of this nature are:

- (i) the respondent may not recall correctly details of the past week, particularly those relating to persons other than himself;
- (ii) the enumerator may misinterpret the definitions despite careful instruction;
- (iii) the enumerator may inadvertently phrase questions which influence the answers of the respondent;
- (iv) the respondent may inadvertently phrase answers which influence the subsequent questions asked by the enumerator; and
- (v) there may be deliberate mis-statements by either enumerator or respondent.

The amount of variance associated with these factors differs with the nature of the inquiry. In general, the more personal and more subjective inquiries are subject to greater error.

Control of the size and nature of non-sampling variability is achieved in large part by questionnaire design and by enumerator selection and training. Both are directed towards obtaining answers within the definitional framework which will most correctly represent the labour force activity of those in the sample. A continuous programme of research has been introduced (including regular field checks by re-interviews of respondent households) which

assesses the variability and the effectiveness of the controls.

One of the problems of classification concerns persons reported as being on temporary lay-off. As defined above, these persons must have specific instructions to return to work within 30 days of the date of lay-off. It is frequently difficult to determine this qualification with accuracy. Respondents may consider that they have such instructions when, in fact, they do not and the enumerator may not probe deeply enough to make the proper classification. Some of those shown as on temporary lay-off, may actually be on indefinite lay-off and in this case should be classified either as without jobs and seeking work, or as voluntarily idle. This situation is more prevalent in winter months and was most pronounced in the period from 1950 to 1953. It has not been possible to measure the numbers involved and, therefore, no adjustment has been made in the Tables. The magnitudes may be of the order of some 20,000 for each of the months in the first quarter of 1953. Continual instruction of enumerators since 1953 has reduced considerably the incorrect enumeration of this category.

(b) Sampling Variability.

The estimates are based on the responses of a sample of the population and may differ from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. The approximate sampling variability of estimates of various sizes is shown in the Table below. The chances are about 19 out of 20 that the difference between the estimate and the figure that would have been obtained from a complete count is less than the sampling variability indicated.

Size of Estimate	Sampling Variability
10,000	4,000
50,000	8,000
100,000	11,000
500,000	25,000
1,000,000	33,000
5,000,000	54,000

Estimates of characteristics by age and sex are subject to somewhat less sampling variability than that shown above.

The estimates of sampling variability cannot be applied to estimates of month-to-month change. The ratio of any two successive estimates of any labour force characteristic is likely to be relatively more reliable than either of the two estimates from which it is computed.

	Dec.	11	10,394	5,435	5,187	4,632	375	75	105	248	4,959
1955	Jan.	22	10,429	5,366	5,003	4,487	295	86	135	363	5,063

- (1) Newfoundland included in estimates only from October, 1949. (2) Included here are only those who did not work during the entire survey week and were looking for work. For all those who sought work during the survey week see Table 3. (3) See Part IV (a), Reliability of Estimates - Non-sampling for interrelation of "temporary layoff" and "without job and seeking". (4) Excluding Manitoba which was not covered due to flood conditions. See Appendix A. (5) The unusually large number working less than 35 hours in the survey week ended April 17, 1954, was due to Good Friday being in the survey week.

(1) Newfoundland included in estimates only from October, 1949. (2) Included here are only those who did not work during the entire survey week and were looking for work. For all those who sought work during the survey week, see Table 3. (3) See Part IV (a), Reliability of Estimates - Non-sampling, for interrelation of "temporary layoff" and "without job and seeking work". (4) Excluding Manitoba which was not covered due to flood conditions. See Appendix A. (5) The unusually large number working less than 35 hours in the survey week ended April 17, 1954, was due to Good Friday being in the survey week.

Persons without jobs and seeking work (1) (2)	115	103	12	91	78	13	91	75	16

(1) See Part IV (a), Reliability of Estimates - Non-sampling, for interrelation of "temporary layoff" and "without job and seeking work."

(2) Included here are only those who did not work during the entire survey week and were looking for work. For all those who sought work during the survey week, see Table 3.

(3) Included in this category for May, 1953, are those who lost time during the week due to the religious observance of May 14, 1953.

* Less than 10,000.

(1) Excluding Manitoba which was not covered due to flood conditions. See Appendix A.

(2) The unusually large number working less than 35 hours in the survey week ended April 17, 1954, was due to Good Friday being in the survey week.

NOTE: - Data previous to October, 1949 not available.

(1) Newfoundland included in estimates only from October, 1949.

(2) See Part IV (a), Reliability of Estimates - Non-sampling, for interrelation of "temporary layoff" and "without job and seeking work".

(3) Excluding Manitoba which was not covered due to flood conditions. See Appendix A.

* Less than 10,000.

NOTE: Data previous to June, 1946, not available.

1955	Jan. 22

(1) Newfoundland included in estimates only from October 1949. (2) Includes quarrying and oil wells. (3) The estimates for mining and quarrying are correct within the sampling variability. However, due to a revision in the sample the estimates for December, 1953, and later are not comparable, for purpose of measuring change, with estimates for November, 1953, and earlier. (4) Includes storage and communication. (5) Includes real estate. (6) Excluding Manitoba which was not covered due to flood conditions. See appendix A.

Note: Data for November, 1952, not available. January 1955 estimates not yet available.

1955	Jan.	22

(1) Newfoundland included in estimates only from October, 1949. (2) Includes quarrying and oil wells. (3) The estimates for mining and quarrying are correct within the sampling variability. However, due to a revision in the sample the estimates for December, 1953, and later are not comparable, for purpose of measuring change, with estimates for November, 1953, and earlier. (4) Includes storage and communication. (5) Includes real estate. (6) Excluding Manitoba which was not covered due to flood conditions. See appendix A.

* Less than 10,000.

Note: Data for November, 1952, not available. January 1955 estimates not yet available.

1955	Jan. 22

(1) Newfoundland included in estimates only from October, 1949. (2) The estimates for mining and quarrying are correct within the sampling variability. However, due to a revision in the sample the estimates for December, 1953, and later are not comparable, for purposes of measuring change, with estimates for November, 1953, and earlier. (3) Includes mechanical occupations, stationary enginemen, and occupations associated with electric power production. (4) Excluding Manitoba which was not covered due to flood conditions. See appendix A.

Note: Data previous to August, 1947, and for November, 1952, not available. January 1955 estimates not yet available.

1955	Jan.	22

(1) Newfoundland included in estimates only from October, 1949. (2) The estimates for mining and quarrying are correct within the sampling variability. However, due to a revision in the sample the estimates for December, 1953, and later are not comparable, for purposes of measuring change, with estimates for November, 1953, and earlier. (3) Includes mechanical occupations, stationary enginemen, and occupations associated with electric power production. (4) Excluding Manitoba which was not covered due to flood conditions. See appendix A.

* Less than 10,000.

Note: Data previous to August, 1947, and for November, 1952, not available. January 1955 estimates not yet available.

(1) Excluding Manitoba which was not covered due to flood conditions. See Appendix A.

Appendix A - Estimates for week ended June 3, 1950, including Manitoba.

In June, 1950, no interviewing was carried out in Manitoba due to flood conditions in the Red and Assiniboine valleys and all estimates for that month excluded Manitoba. A calculation has been made of what the estimates might have been if there had been no flooding and figures on this basis are included in the following tables numbered to correspond with those in the body of the reference paper. The Manitoba component of these estimates were calculated using straight-line interpolation between June 1949 and June 1951.

Table 1 - Summary of the labour force characteristics of the population 14 years of age and over, Canada.

(estimates in thousands)

	Total	Civilian labour force						Not in the labour force	
		Total labour force	With jobs				Without jobs and seeking work (1) (2)		
			Total with jobs	At work (hours)					Not at work
				35 or more	15-34	1-14			
Both Sexes	9,610	5,198	5,056	4,533	332	101	90	142	4,412
Males	4,826	4,064	3,944	3,672	169	31	72	120	762
Females	4,784	1,134	1,112	861	163	70	18	22	3,650

(1) Included here are only those who did not work during the entire survey week and were looking for work.

(2) See Part IV(a), Reliability of Estimates - Non-sampling, for interrelation of "temporary layoff" and "without jobs and seeking work."

Tables 2 and 3 - No data available before November, 1952.

Table 4 - Age distributions, Canada.

(estimates in thousands)

	Total	14-19 years	20-24 years	25-44 years	45-64 years	65 years and over
