### APPENDIX A

Estimates for week ended June 3, 1950, including Manitoba .....	188
-----------------------------------------------------------------	-----

## INTRODUCTION

This 1958 Revision of Reference Paper No. 58, together with the regular monthly reports beginning with August 1958, contains the most recent revisions of the labour force estimates.

The labour force surveys were begun in November 1945 by the Dominion Bureau of Statistics to provide periodic data on the employment characteristics of the Canadian people. They are sample surveys in which, at present, about 35,000 households chosen by random area-sampling methods in 120 different areas in Canada are interviewed each month. Prior to November 1952, the interval between surveys was approximately three months. Information is obtained for all members of the sample households 14 years of age and over. This information relates to the week immediately preceding the start of interviewing for each survey and persons are classified according to the activity or status reported for that week.

The final estimates are obtained by applying to the sample survey results weights based on estimated totals of population, separately for age and sex groups in each province. These totals are derived from the official estimates of population based on the latest census counts adjusted by the number of births, deaths, immigrants and emigrants for the intervening period.

## COVERAGE

The sample used in the surveys of the labour force has been designed to include all persons 14 years of age and over who reside in Canada with certain specific exceptions. No estimates are made for: residents of the Yukon and Northwest Territories; members of the armed services; Indians on reservations; and inmates of institutions. The total persons 14 years of age and over in these categories as estimated at July 19, 1958, was 346,000.

In April, 1949, Newfoundland formally entered Confederation as the tenth province of Canada. However, it was not possible to include estimates

Estimates referring to August 1951 or later in the original Reference Paper No. 58 and monthly reports issued since were weighted to population estimates based on the 1951 Census. These population estimates have now been revised using 1956 Census data and new weighting factors have been calculated. Except for industry and occupation distributions, the labour force estimates from August 1951 to July 1958, inclusive, have been reweighted and the revised estimates are published in this revised edition of the reference paper. Revision of industry and occupation data is now being carried out and this material will be made available in a supplementary publication when completed. Although not subject to this revision, estimates for the surveys before August 1951 are included in this publication for convenience of reference. Beginning with August 1958, labour force results as published in the regular monthly reports will have been weighted to population estimates based on the 1956 Census and will form a consistent series with the material in this reference paper.

Data for Canada as a whole are given in Tables 1 to 11, inclusive, Table 1 summarizing labour force characteristics and the remainder dealing with particular classifications. All regional estimates are brought together in Table 12. Definitions and explanations with reference to these tables are contained in the following sections.

for Newfoundland until October, 1949. Commencing with the survey for that month, Newfoundland has been included in the estimates for the country as a whole and is shown separately in the regional distributions.

In June, 1950, no interviewing was carried out in Manitoba due to flood conditions in the Red and Assiniboine Valleys, and all estimates for that month exclude Manitoba. A calculation has been made of what the estimates might have been if there had been no flooding and figures on this basis are shown in Appendix A.

## DEFINITIONS

### (a) Civilian labour force

The civilian labour force is composed of that portion of the civilian non-institutional population 14 years of age and over who, during the survey week: did some work; had jobs but did no work; or did not have jobs and were seeking work.

### (b) Persons with jobs and at work

This category includes those who did any work during the survey week for pay or profit or who did unpaid work which contributed to the running of a farm or a business operated by a related member of the household.

A useful supplement to the estimates of persons with jobs and at work is provided in the distribution by hours worked, of those employed in agriculture and in non-agricultural industries, and also of paid workers in non-agricultural industries. While variations in the estimates of the total number of persons at work provide a valuable indicator of economic conditions, significant changes in employment may be concealed unless some attention is directed to the extent to which people worked less than full-time.

Further information concerning those who worked less than full time is provided in the classification by the main reasons for working less

than 35 hours. The categories are largely self-explanatory but the category "on short-time" may require further definition. This group includes those who worked with the same employer only some days of the work-week, or only some hours of the work-day. For example, due to a shortage of materials, the staff of a factory may be compelled to reduce the work-week from 40 to 25 hours, or the work-day from 8 to 5 hours. Thus, there is a continuous pattern of employment with the same employer without any work stoppage and the condition is temporary in nature.

In any enterprise operated by a related member of the household, it may be difficult to determine what portion of the work of an unpaid worker actually contributes to the operation of the enterprise and what portion contributes to the normal maintenance of the household. It has been found that this difficulty is confined for the most part to female unpaid family workers on farms who are reported as principally engaged in keeping house. To compensate for the over-reporting of hours in this group, the first 20 hours are considered to apply to household maintenance, and all subsequent work reported is considered to contribute to the operation of the enterprise. This adjustment is made at the processing level and applies only to farm housewives reporting unpaid work.

**(c) Persons with jobs but not at work**

This category includes those who had jobs but did not work during the survey week because of vacation, illness, bad weather, industrial dispute or temporary lay-off. Persons who had jobs but did not work during the survey week and who also looked for work are included in sub-section (d) below, "Persons without jobs and seeking work".

Persons on temporary lay-off are those who were laid off from their job with definite instructions to return to work within 30 days of the date of lay-off. If a person has no such instructions and is not working at some other job he is regarded as "without a job and seeking work" or as "voluntarily idle" depending upon the individual circumstances (see sub-section (a) of "Reliability of Estimates").

**(d) Persons without jobs and seeking work**

This category includes those persons who, during the survey week, were looking for work and did no work. Persons who were temporarily away from their jobs during the whole of survey week and who were seeking work are considered as without jobs and are included in this category (see sub-section (c) above).

In addition to those who actively looked for work, this classification includes persons who would have looked for work except that they; were temporarily ill; were on indefinite or prolonged lay-off and expected to be called back to their old jobs; or believed that no work was available.

**(e) Persons not in the labour force**

The non-working part of the population 14 years of age and over consists of those who are outside the labour force in the sense that they are not working for pay or profit, or as unpaid workers in family enterprises, nor are looking for work. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as "persons with jobs". If they were looking for work, they are classified as "persons without jobs and seeking work".

**RELIABILITY OF ESTIMATES**

**(a) Non-sampling variability**

The data obtained by enumeration, either of the entire population or of a sample of it, will differ in some degree from the true data as outlined by the definitions because of enumerator and respondent variations. The principal elements of this nature are:

- (i) the respondent may not recall correctly details of the past week, particularly those relating to persons other than himself;
- (ii) the enumerator may misinterpret the definitions despite careful instruction;
- (iii) the enumerator may inadvertently phrase questions which influence the answers of the respondent;
- (iv) the respondent may inadvertently phrase answers which influence the subsequent questions asked by the enumerator; and
- (v) there may be deliberate mis-statements by either enumerator or respondent.

The amount of variance associated with these factors differs with the nature of the inquiry. In general, the more personal and more subjective inquiries are subject to greater error.

Control of the size and nature of non-sampling variability is achieved in large part by questionnaire design and by enumerator selection and training. Both are directed towards obtaining answers within the definitional framework which will most correctly represent the labour force activity of those in the sample. The continuing programme of research in this field includes the re-enumeration of a sub-sample of households each survey. The comparison of the original and the corresponding re-enumeration material will provide measures of response variation.

One of the problems of classification concerns persons reported as being on temporary lay-off. As defined above, these persons must have specific instructions to return to work within 30 days of the date of lay-off. It is frequently difficult to

determine this qualification with accuracy. Respondents may consider that they have such instructions when, in fact, they do not and the enumerator may not probe deeply enough to make the proper classification. Some of those shown as on temporary lay-off, may actually be on indefinite lay-off and in this case should be classified either as without jobs and seeking work, or as voluntarily idle. This situation is more prevalent in winter months. It has not been possible to measure the numbers involved and, therefore, no adjustment has been made in the Tables.

**(b) Sampling variability**

In addition to non-sampling error, discussed in sub-section (a), the survey results are subject to sampling variability. While for the non-sampling component of error statistical estimates of its

magnitude are not available, estimates of the probable range of the sampling component of error have been calculated. Estimates of the sampling variability for specified sizes of estimates in any month are given in the following table. The column headed "General sampling variability" applies to most labour force characteristics. However, for persons without jobs and seeking work and for persons working from 1 to 34 hours, the sampling variability is about 40 per cent higher and this higher variability is shown in the table also. Sampling variability is defined as twice the standard deviation; thus the odds are about 19 to 1 that the range (Labour Force Estimate  $\pm$  Sampling Variability) contains the true estimate.

These estimates are averages since sampling variability differs from characteristic to characteristic and from month to month.

**Estimated sampling variability for the major labour force characteristics by size of estimate**

Size of estimate	General sampling variability		General sampling variability + 40% <sup>1</sup>	
	Size	Per cent	Size	Per cent
10,000 .....	3,500	35.0	5,000	50.0
25,000 .....	5,500	22.0	7,500	30.0
50,000 .....	8,000	16.0	11,000	22.0
75,000 .....	9,500	12.7	13,500	18.0
100,000 .....	11,000	11.0	15,500	15.5
250,000 .....	17,500	7.0	24,500	9.8
500,000 .....	24,000	4.8	33,500	6.7
750,000 .....	28,500	3.8	40,000	5.3
1,000,000 .....	33,000	3.3	46,000	4.6
2,500,000 .....	49,000	2.0		
5,000,000 .....	58,000	1.2		
6,000,000 .....	60,000	1.0		

<sup>1</sup> Applicable to persons without jobs and seeking work and to persons working 1 to 34 hours.

These estimates of sampling variability cannot be applied directly to estimates of month to month change. However, recent studies indicate that the sampling variability of a difference over a period of one month can be approximated for "persons with jobs" and for "persons without jobs and seeking work" using the following formula:  $(0.6) \times$  (the square root of the sum of the squares of the sampling variabilities associated with the two estimates).

For example, the revised estimates of persons with jobs in June and July 1958, were 5,879,000

and 6,023,000 with sampling variabilities of about 60,000 each. The difference between these two estimates (144,000) has a sampling variability of approximately  $(0.6) \sqrt{(60,000)^2 + (60,000)^2}$  or about 51,000.

For "persons without jobs and seeking work", the corresponding revised estimates for June and July 1958 were 324,000 and 291,000 with sampling variabilities of about 28,000 and 27,000. The difference between these two estimates (33,000) has a sampling variability of approximately  $(0.6) \sqrt{(28,000)^2 + (27,000)^2}$  or about 23,000.

<sup>1</sup> A large number of persons with jobs worked less than 35 hours because of a holiday in the survey week. (Apr. 16, 1954 and Apr. 19, 1957 - Good Friday; Oct. 14, 1957 - Thanksgiving Day; Nov. 11, 1957 - Remembrance Day; May 19, 1958 - The Queen's Birthday).  
<sup>2</sup> Some persons lost time from work due to the holiday observed in British Columbia on Nov. 12, 1956.  
<sup>3</sup> Less than 10,000.

<sup>4</sup> A large number of persons with jobs worked less than 35 hours because of a holiday in the survey week. (Apr. 16, 1954 and Apr. 19, 1957 - Good Friday; Oct. 14, 1957 - Thanksgiving Day; Nov. 11, 1957 - Remembrance Day; May 19, 1958 - The Queen's Birthday).

<sup>3</sup> Some persons lost time from work due to the holiday observed in British Columbia on Nov. 12, 1956.

<sup>5</sup> Less than 10,000.

See footnotes on page 114.

APPENDIX A

Estimates for week ended June 3, 1950, including Manitoba.

In June, 1950, no interviewing was carried out in Manitoba due to flood conditions in the Red and Assiniboine valleys and all estimates for that month excluded Manitoba. A calculation has been made of what the estimates might have been if there had been no flooding and figures on this basis are included in the following tables numbered to correspond with those in the body of the reference paper. The Manitoba component of these estimates were calculated using straight-line interpolation between June 1949 and June 1951.

TABLE 1. Summary of the Labour Force Characteristics of the Population 14 Years of Age and Over, Canada<sup>1</sup>

	Total	Labour force						Not in the labour force	
		Total labour force	With jobs				Without jobs and seeking work <sup>2</sup>		
			Total with jobs	At work (hours)					
				35 or more	15-34	1-14			
estimates in thousands									
Both sexes .....	9,610	5,198	5,056	4,533	332	101	90	142	4,412
Males .....	4,826	4,064	3,944	3,672	169	31	72	120	762
Females .....	4,784	1,134	1,112	861	163	70	18	22	3,650

<sup>1</sup> Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories.

<sup>2</sup> Included here are only those who did not work during the entire survey week and were looking for work.

TABLES 2 and 3. No data available before November, 1952.

TABLE 4. Age Distributions, Canada

	Total	14-19 years	20-24 years	25-34 years	45-64 years	65 years and over
estimates in thousands						
The labour force .....	5,198	535	730	2,330	1,351	232
Males .....	4,064	325	451	1,678	1,150	210
Females .....	1,134	200	259	452	201	22
Persons with jobs .....	5,056	503	723	2,282	1,321	227
Males .....	3,944	313	468	1,836	1,122	205
Females .....	1,112	190	255	446	199	22
Persons without jobs and seeking work .....	142	32	27	48	30	*
Persons not in the labour force .....	4,412	727	320	1,532	1,055	778
