## CLAIMS AND BENEFIT PAYMENTS

January 1962

## Claimants at month-end: <br> volume and type

Claimants for unemployment insurance benefit on January 31 numbered 698,500 , an increase of some 97,000 from December 29, but 148,000 fewer than on January 31, 1961. These totals include persons claiming under the seasonal benefit provisions, totaling 174,200 on January 31, 108,500 on December 29, and 205,000 on January 31, 1961.

The predominance of males among the persons filing claims during the past three months is reflected in a significant variation in the per cent distribution of males and females by number of weeks on continuous claim.

Per cent distribution, by weeks on claim
Total 12 weeks or less 13 weeks or more

| Both sexes | 100.0 | 83.2 | 16.8 |
| :--- | :--- | :--- | :--- |
| Males | 100.0 | 86.2 | 13.8 |
| Females | 100.0 | 71.7 | 28.3 |

Four out of five persons coming on claim during the last three months were males. On the other hand, males comprised less than 2 out of 3 persons on claim over 20 weeks as of January 31.

The proportion of claimants classed as seasonal benefit, at 25 per cent, was unchanged from January 31,1961.

## Initial and renewal claims: receipt and disposal

A total of 320,200 initial and renewal claims was filed during January, down 37,700 from December and 24,000 fewer than for January 1961. Three out of 4 claims filed during these periods were classed as "initial".

Of the 237,300 initial claims filed in January, some 183,600 , or slightly more than three-quarters, can be categorized as new separations(1) from employment, the remalnder being from persons exhausting benefit and seeking re-establishment of credits, under either the regular or seasonal benefit provisions. To this may be added 82,900 renewal claims, for a total of 266,500 new cases of recorded unemployment during January.

## Beneficiaries and benefit payments

The average weekly number of beneficfaries was estimated at 560,100 for January, versus 320,200 for December and 672,500 for January 1961. Payments, at $\$ 57.8$ million in January, were almost double those for December ( $\$ 29.4$ million) but were $\$ 10$ million below last January ( $\$ 67.7$ million). The average weekly benefit paid was $\$ 24.57$ for January, $\$ 24.20$ for December and $\$ 23.96$ for January 1961.

Claims and benefit payments, by province
Percentage changes in the January 31 claimant count, over December 29 , were substantially greater in the Atlantic provinces than elsewhere. This is associated with the importance of seasonal benefit claimants (and the concentration of fishing claimants), in that area.

Percentage change in month-end claimant count

| +17 | $+17$ | + 20 | - 12 | - 13 | - 6 | +18 | +16 | + 22 |
| + 7 | + 4 | + 20 | - 16 | - 18 | - 10 |  |  | + 16 |

While the level of claimants is substantially lower than last year, the December to January increases this year were slightly above those for a year ago in most provinces, as comparison of columns (1) and (7) indicates.

The importance of the longer term claimant group varies significantly, by province. The proportion classed as long-term was greatest in British Columbia and smallest in the Atlantic provinces.

## Percentage distribution of claimants, by number of weeks on claim as at January 31, 1962.

Canada Nfld. P.E.I. N.S. N.B. Que. Ont. Man. Sask. Alta. B.C.

| 12 weeks or less | 83 | 92 | 94 | 85 | 87 | 83 | 81 | 84 | 84 | 83 | 80 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 13 weeks or more | 17 | 8 | 6 | 15 | 13 | 17 | 19 | 16 | 16 | 17 | 20 |

All provinces except Manitoba showed a decine from last year in the number of claimants identified as seasonal benefit on January 31. However, the proportion classed as seasonal benefit, by province, is virtually unchanged from last year.

| Seasonal Benefit claimants as a per cent |  |  |

The proportion of initial claims approximating the new separations(1) from insured employment during the month exceeded 80 per cent in the Atlantic provinces. Elsewhere, this proportiun ranged between 70 and 80 per cent. The concentration of fishermen in the Atlantic region is probably the main factor in this variation. This is because fishing claimants are, in the main, eligible only for seasonal benefit. The number of new initial claims, for January, in absolute numbers and as a per cent of all initial claims is shown below:

|  | New initial claims |  |
| :--- | ---: | ---: |
| \% of all |  |  |
| Number | Initial claims |  |

## Industrial Classification of Persons Filing Inftial(2) Claims for Unemployment Insurance Benefit During December.

One out of every two persons filing an initial(2) claim during December represented a separation from employment in either manufacturing or construction, which contributed about equal numbers to the initial claimant total. An additional twenty per cent were previously employed in transportation, communication, other utilities or in trade.

However, in individual provinces there was considerable deviation from the national pattern. Manufacturing and construction accounted for as much as 57 per cent in Ontario, ( 32 and 25 per cent respectively), while in Newfoundland less than 30 per cent ( 12 and 17 per cent respectively) of the cases were thus classified. Elsewhere, the proportions were between these limits.

[^0]percantage distribution of claims by industry and province, December 1961.

| other | 3 | 1 | 4 | 3 | 3 | 2 | 4 | 2 | 3 | 2 | 4 |

(1) Includes all basic government service except Post office, which is now included with commanication.

More than one in five of the cases in Newfoundland and Prince Edward Island represented claims from fishemen, (2) with the construction industry ranking second. In New Brunswick, claims from construction slightly outnumber those from fishermen. One in five of the New Brunswick claims was from some segment of the manufacturing industry, the largest single component being food processing. Chaims from persons engaged in logging were second in importance in New Brunswick while in Newfoundland this industry accounted for approximately the same volume of claims as did construction.

In central Canada, manufacturing was the single most important source of new claims, accounting for a third of the cases in Ontario and 29 per cent in Quebec. In both provinces, construction accounted for about 25 per cent of claims.

In two of the Prairie provinces construction accounted for a relatively greater volume of cases than any other industry in any other province. In Alberta, almost 40 per cent of claims were from construction; in Saskatchewan this proportion was 33 per cent and in Manitoba, just under 30 per cent. One in five claims in Manitoba represented a separation from manufacturing. In Saskatchewan one in five represented a separation from trade.

Manufacturing ranked first in British Columbia, construction second. These two industries made up about 40 per cent of the total. Forestry (chiefly logging) and trade totalled an additional 25 per cent.

Within the manufacturing industry there was considerable concentration in the durable goods segment and in the food processing segment of non-durables, as the following table illustrates:

Nfld. P.E.I. N.S. N.B. Que. Ont. Man. Sask. Alta. B.C.

| All manufacturing | 11.7 | 17.1 | 15.8 | 20.5 | 29.0 | 32.3 | 19.5 | 11.0 | 9.9 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Durable | 1.9 | 1.5 | 5.6 | 6.6 | 9.4 | 13.6 | 8.3 | 4.0 | 4.8 |
| Non-durable | 9.8 | 15.6 | 10.2 | 13.9 | 19.6 | 18.7 | 11.2 | 7.0 | 5.1 |
| Fond Processing | 8.9 | 14.9 | 7.3 | 11.3 | 4.9 | 7.1 | 5.9 | 4.9 | 2.7 |
| Other | 0.9 | 0.7 | 2.9 | 2.6 | 14.7 | 11.6 | 5.3 | 2.1 | 2.4 |

(?) In coding cases to the fishing industry, persons whose occupation was "fisherman" were coded to the fishing industry even though the former employer's nature of business was "fish processing". This ereatment is slightly different from the general coding practice of assigning a single code on the hasis of the principal activity. Since, in the main, fishermen report themselves as self-employed, such cases constitute the bulk of persons coded to the fishing industry.

While lay-offs in food processing plants are reflected in all provinces, they accounted for a relatively higher proportion of the non-durable cases in the Atlantic provinces and British Columbia than elsewhere.

Examination of the month-end claimant count for those on claim 4 weeks* or less gives some indication of the sex composition of the emerging cases of recorded unemployment during the month. There are, however two qualifications which should be kept in mind. In the first place, the month-end claimant count would include those persons who came on clatm during the month and filed a renewal claim. These persons would not have been included in the initial claim study. Secondly, it is inevitable that some persons never report back to the local office after filing an initial claim and, depending on the reporting schedule, some of these cases might not be included in the count of claimants currently reporting as of the month-end.

That the December claims had a higher proportion of males than the previous month is evident from the following table:

| Dec. 29, 1961 | Nov. 30, 1961 | Dec. 29, 1961 | Nov. 30, 1961 |
| :---: | :---: | :---: | :---: |
| 83.0 | 80.4 | 71.4 | 65.0 |
| 96.8 | 95.9 | 86.2 | 79.1 |
| 86.0 | 78.4 | 71.6 | 58.9 |
| 89.9 | 86.7 | 80.1 | 75.9 |
| 86.5 | 82.7 | 73.8 | 67.6 |
| 81.8 | 78.2 | 70.3 | 64.3 |
| 78.1 | 77.7 | 68.3 | 62.5 |
| 83.1 | 79.8 | 76.6 | 69.3 |
| 86.3 | 85.7 | 76.8 | 65.8 |
| 86.6 | 82.7 | 71.3 | 60.9 |
| 83.3 | 80.8 | 70.1 | 65.6 |

Variations in these proportions may be associated with the relative importance of industries, such as fishing and construction, in the claimant group. However, interprovincial variation in labour force participation rates for women is also a factor.
.. Figures not available

- N11
* The total of month-end claimants 4 weeks or less probably includes a certain number who started on claim towards the end of the preceding month. For example, a person filing a claim November 27 would be included in the 2 weeks or less as of November 30 and if still reporting at the end of December would be included in the 4 weeks or less if the period covered by his last report in December was the week ending December 23.

Sumary table

Table 1. - Estimates of the Insured Population under the Unemployment Insurance Act.

| End of: | Total | Employed | Claimants |
| :---: | :---: | :---: | :---: |
|  |  |  |  |

(1) By virtue of seasonal benefit class B, the claimant count during the seasonal benefit period may include a number of persons who were not represented in the insured population within the last six months. This explains, in part, unequal variations in the month-to-month movement of the employed and claimants.
(2) In addition, revised claims received numbered $66,623$.

The privistoss reguintits the operation of beasonal benefit are unchanged from last year. Eifecilve November 20,1961 , to mid-May 1962 , claims failing the regular contribution requirements are cunsidered for seasonal benefit. Benefit is not payable under these terms for unemployment occurring before December 4 (1). Only one seasonal benefit period may be established by a claimant during this period. As a result, claimants exhausting their right to seasonal benefit during this interval would be tested under the regular provisions if they wished to be re-considered for benefit. However, since the minimum establishment is 12 weeks, (2) exhaustions would not occur before February 17.

In testing for seasonal benefit, claims falling the regular requirements are considered first under class $A$, i.e. a minimum of 15 contribution weeks since the preceding March 31 . It follows, then, that no claims can be established in this class after March 31, 1962. Total entitlement for claimants qualifying in this class will be based entirely on contributions during this qualifying period. The duration will be 5 weeks of benefit for every 6 weeks of contribution, or a minimum of 13 weeks (subject to the exception in footnote 2).

Cases failing under class A are then examined for possible qualification under class B which represents an extension of benefit for those for whom a regular benefit period terminated during the interval since May 20,1961 . The duration will be that shown on the preceding regular benefit, or the number of weeks which remain in the seasonal benefit period, whichever is the lesser. The weekly rate (3) will be that of the preceding claim, adjusted, if necessary, for any change in dependency status.

Claimants for seasonal benefit (except fishermen) (4) must comply with all the provisions of the Act and Regulations, except where mentioned above.

## Fishing Claimants

Table $3 b$, Fishing seasonal benefit claimants, includes those seasonal benefit claimants whose Glaim documents carry the identification $F$, for fishing. This indicates that the person is eligible for seasonal benefit by virtue of fishing contributions, i.e. his countable contributions for the 15 weeks included at least one week of fishing contributions (or his preceding regular benefit period was also designated as F.).
(1) A claimant eligible to have the waiting period waived could draw seasonal benefit for the week commencing November 27.
(2) Twelve weeks is the minimum on SBB claims. Where fewer than 12 weeks remain between the date of establishing the $c l a i m$ and May 19 , the duration authorized will be equal to that number of weeks. For SB claims established subsequent to March 3 the duration will be under 12 weeks.
(3) Section 47 (2a) of the Act is not applicable to seasonal benefit claims. This section was added in September 1959 in order to minimize the impact of short-term employment on the weekly rate for subsequent regular claims filed within a two-year period.
(4) During the seasonal benefit period, clalmants classed as fishermen will be considered available and unemployed in respect to any activity in comercial fishing or in the repair of fishing gear, equipment or boat. However, income from fishing is taken into consideration in determining the amount of benefit payable.

Calendar Year totals, 1961 and 1960 , Tables $i$ to $v$. Historical data, 1942 et seg, Tables vi to viil

During 1961 the insured population, averaging $4,100,000$, was virtually unchanged from 1960, and the estimate for the end of December, at $4,258,000$, was almost the same as a year earlier.

Examination of data covering the non-agricultural paid worker segment of the employed labour force during 1961 indicates an increase of some 70,000 or less than 2 per cent over 1960. On an industry basis, the largest year-to-year increase was in service, an industry in which unemployment insurance coverage is relatively low.

A total of $2,460,000$ initial and renewal claims was filed during 1961 , some 240,000 fewer than in 1960. For the month of high claim, December, this year's total was almost 100,000 lower than 1960. The count of claimants at the month-end averaged 487,000 during 1961, 30,000 lower than for 1960 . The peak total in 1961 was 873,000 on February 28, as against 823,000 on March $31,1960$.

Payments rose to $\$ 494$ million in 1961 as against $\$ 482$ million in 1960. March 1961 payments were a record $\$ 85$ million, some $\$ 10$ million in excess of March 1960. The 1961 increase in payments, in contrast to lower levels of claims, is associated, to some extent, with the delayed impact of the two new contribution classes (and corresponding benefit rates) introduced in September 1959\%. However, higher earnings, changing composition of claimants and differences in duration of compensatory periods are also contributing factors.

Adilitional information on the impact of the two new classes of benefit rates is available in Table v. The December 1961 average of $\$ 24.20$ was very little above the $\$ 23.96$ shown for January 1961. In 1960, however, the January aver age was $\$ 21.91$ in comparison with \$23.51 for December.

Provincial differences in average weekly rates reflect not only variations in earnings but also in the sex composition of the claimants. Other things being equal, a province where the claimant group is predominantly male will show a higher average rate than one where females are relatively more numerous.

## Glossary of Terms

Insured population: For parboses of this report, the insured population is defined as the number of persons estimated as currently in contact with the Unemployment Insurance Commission either as contributcrs or as claimants. The estimates are revised once a year when data from the book renewal are available.

Emplayed estimated as
population: The number of persons currently contributing under the scheme.

Claimant population: The count of persons currently reporting to the local offices as at the end of the month. An exception occurs in the month which serves as a benchmark, i.e., May or June, when the claimant count represents the number of persons reporting to local offices as claimants during the first two weeks of book renewal.

Initial claim: An application for benefit from an insured person for whom there is no benefit period in existence. This category includes both regular and seasonal claims, since it is impossible to determine, at the time of filing a claim, the type of benefit for which the claimant will subsequently qualify. On an initial claim the claimant's contribution history for the two years preceding the claim is examined. This is required in order to test the claimant's attachment to insured employment and thus determine the type of benefit for which he is eligible, if at all. In cases of eligibility, this record is used to calculate the weekly rate of benefit and maximum entitlement for the benefit period. Only one initial claim is required tor each benefit period.

Benefit period: A period commencing with the week in which the initial claim is made, provided the qualifying conditions are fulfilled. The maximum length of the benefit period is 52 weeks, in the case of claimants qualifying under the regular terms of the Act. Seasonal benefit periods may be established only from December 1 to mid-May, with a maximum length of 24 weeks. In either case, however, the benefit period terminates with exhaustion of benefit.

Renewal claim: An application for benefit from an insured person during the currency of a benefit period. As in the case of initial claims, this category includes renewal claims from all classes of claimants, i.e., regular, seasonal and fishing.

Initial and renewal claims fuled: The number of new cases of recorded unemployment among insured persons during a period. However, an initial claim representing a request for re-establishment of a benefit period with no actual interruption in the period on claim would not constitute a new case of
memployment. To the extent that such claims are filed in any month, these claims overstate the number of new cases.

Revised claims: Those, other than initial or renewal, which must be considered by an insurance officer, e.g., involving dependency, extension of qualifying period, etc. A revised claim is thus an administrative device to initiate action for reconsideration of an existing initial or renewal claim.

Claimants currently reporting to local offices: All persons currently reporting to local offices to claim unemployment insurance benefit, either regular, seasonal or fishing. Under the Unemployment Insurance Act a person may claim benefit for any week during which he did not work a full working week.

Number of weeks on claim: The cumulative number of weeks during which a claimant has reported to prove unemployment during the current period on claim. The count commences with the week in which the initial (or renewal) claim is filed and continues unbroker so long as the claimant continues to report as directed. Cases occur in which a spell of unemployment extends beyond the tormination of a benefit period and a new benefit period is immediately established with no actual interruption of the period on claim. In such cases the cumulative number of weeks is transferred from the previous claim document to that covering the subsequent benefit period and the count continued. This procedure applies also for contiguous periods on regular and seasonal benefit. Excluded from the count are any weeks for which a claimant reported "non-a vailability" during a complete week.

Entitled to benefit: For purposes of this report, this category comprises those adjudications arising from initial claims on which a benefit period (regular, seasonal or fishing) is shown as established and no disqualification imposed and adjudications indicating "approval" on renewal claims, either regular, seasonal or fishing.

Not entitled to benefit: Claimants disqualified on initial and renewal claims, and those for whom the adjudication on an initial claim was to the effect that the claimant was ineligible to establish either a regular; seasonal or fishing benefit period.

Benefit period not established; The minimum contribution requirements for any type of benefit have not been met. This figure thus represents the net total of persons with insufficient contributions to establish a benefit period under either the resular, seasonal or fishing benefit provisions, based on decisions arising from initial claims only. Subsequent decisions arising from a revised claim and
constituting a reversal of the initial adjudication are not taken into account, but such decisions would reduce the number of beneflt periods not est ablished.

Hisqualification: A disqualification is imposed because of circumstances surrounding the claim which render the claimant ineligible for the receipt of benefit either for a stated period or so long as the condition causing the disqualification continues. Where it is established that loss of employment was voluntary on the part of the claimant, i.e., he left employment of his own volition or was dismissed because of misconduct, the maximum disqualification is six weeks; claimants participating In a labour dispute in which they are directly interested are disqualified for the duration of the work stoppage. In assessing the number of cases of disqualification, no distinction is made as to the type of claim, hence disqualifications arising fromrevised claims are included. The cases mentioned here serve as examples only and do not constitute a complete summary of conditions under which a disqualification may be imposed. Sections 59-66 of the Act contain a description of these conditions.

Weeks compensated: Calendar weeks in respect of which some benefit, either regular, seasonal or fishing, was paid. A compensated week is counted in the month in which the copy of the payment voucher is received in the District Treasury Office, which is not necessarily the month in which the week of unemployment occurred.

Imount of benefit: The sum of all benefit payments made during the month. This comprises regular, seasonal or fishing benefit.

Complete week: A week in respect of which a claimant received the full weekly rate of benefit authorized on that benefit period.

Partial week: A week for which a claimant received less than the full weekly rate authorized. A partial week may be due to excess earnings resulting in a reduced payment in direct proportion to the amount of such earnings. If a claimant was "not available for work" on any day or days during a week, a reduction will be made in the weekly rate proportionate to the number of days of "nonavailability". A reduction will occur also if a portion of a week was designated as part of the prescribed waiting period.

Excess earnings: Earnings during a week in excess of the allowable earnings for a claimant's weekly benefit rate. As an example, a claimant whose weekly rate is $\$ 30.00$ may earn up to $\$ 15.00$ in a week without suffering a reduction in benefit; however, in a week where he earns $\$ 17.00 \mathrm{his}$ benefit will be reduced to $\$ 28.00$.

Beneficiaries: Persons who received one or more benefit payments. The estimate, based on the number of payment documents, represents the average weekly number of beneficiaries.

Seasonal benefit: Benefit payable during the period commencing with the Sunday prior to December 1 and ending with the Saturday after May 15, to certain classes of claimants unable to fulfil the requirements under the regular benefit provisions of the Act. Claimants in class A must prove 15 contributions since the Saturday preceding the 31 st day of March immediately prior to the date of claim, while qualification under class 3 is contingent upon a regular benefit period having terminated since the Saturday following the 15 th day of May immediately prior to the claim.

Fishermen: For purposes of regular benefit, a fisherman is a claimant showing five or more fishing contribution weeks during the last 52 weeks. For purposes of seasonal benefit, however, any claimant whose qualifying contributions include even one fishing contribution week is classed as fishing claimant.

Fishing contribution week: Any week for which a. fishing contribution is recorded, whether or not a contribution was also made in respect of other insured employment. Specially designed stamps are used to record insured employment in fishing and employers using the bulk pay method must report employee's fishing contributions separately from those relating to other insurable employment.

Industrial Classification of persons filing new claims for Unemployment Insurance: This information is based on a sample of documents in respect of initial claims filed in local offices during a month. To ensure that all such claims have an equal chance of being included in the study, the documents are accumulated until the end of the third week following the month in which the claim was filed.

The sampling ratio varies from one hundred per cent in the Atlantic provinces (during the period of low claim) to five per cent in ontario. The sample embraces all new initial claims without regard to benefit status, i.e. failures as well as disqualifications are included.

At the present time only the new separations requiring an initial claim are included in this study. as these are the only documents forwarded to the Bureau for analysis. The ratio of initial to renewal claims fluctuates with the claim load, so that during the months of heavy claim, it is approximately $3: 1$.

[^0]:    (1) See footnote (1), page 9.
    (2) Data cover new cases only; i.e. exclude initial claims taken on behalf of persons exhausting benefit and seeking re-establishment of credits. Such exclusions comprised 10 per cent of all initial clams filed. See Technical Note $i n$ Glossary of Terms.

[^1]:    * For further information on these changes, see the September 1959 issue in this series. See also, the November 1960 issue ( $p 4$ ) for discussion on the impact of the new rates.

[^2]:    (1) Comparable data for 1960 available in the January 1961 issue in this series.

[^3]:    (1) Comparable data for 1960 available in January 1961 issue in this series.

[^4]:    (1) Benefit paid under the seasonal benefit provisions is included. The dates during which these provisions were operative, maximum weeks payable each period and amount of benefit paid are as follows:
    February 28 to April 15, 1950 - 6 weeks - $\$ 4.5$ million
    January 1 to March 31, 1951 - 13 weeks - $\$ 3.9$ million
    January 1 to March 31, 1952 - 13 weeks - $\$ 4.6$ million January 1 to April 15, 1953 - 15 weeks - $\$ 9.2$ million January 1 to April 15, 1954 - 15 weeks - $\$ 14.1$ million January 1 to April 15, 1955 - 15 weeks - $\$ 28.9$ milion January 1 to April 21, 1956 - 16 weeks - $\$ 38.1$ million January 1 to April 20, 1957 - 16 weeks - $\$ 29.6$ million December 1, 1957 to June 28, 1958 - 30 weeks - $\$ 109.8$ million
    December 1. 1958 to May 16, 1959 - 24 weeks - $\$ 98.4$ million
    November 30,1959 to May $21,1960-25$ weeks $-\$ 99.1$ m1111on
    November 28,1960 to May 20,1961 - 25 weeks $-\$ 114.7$ million (preliminary)
    (2) Less than $\$ 10,000$.
