REVIEW OF 1963

The current economic expansion continued during 1963. Gross national product reached \$43 billion, an increase over 1962 of 6.6 per cent in current and 4.5 per cent in constant dollars. In contrast with previous recent expansions which were usually related to particular sectors of the economy, the expansion in 1963 was broadly based. Domestic demand for durables, non-durables and services was high and increased exports also contributed significantly to the expansion.

The high levels of economic activity were reflected in the employment situation. The labour force grew, by 200,000, to about 6.8 million from the end of 1962 to the end of 1963. During the same period the non-agricultural paid workers expanded by 250,000 to 5.25 million.¹ Unemployment declined to an annual average of 5.5 per cent in 1963, the lowest since 1957. All regions shared in the improvement, but disparities between regions remained wide. The Atlantic provinces had the highest rates of unemployment followed by Quebec, British Columbia, Ontario and the Prairies in that order.

In spite of the growth among the non-agricultural paid workers over the year, the insured population was virtually unchanged. This constituted, therefore, a further percentage decline of unemployment insurance coverage. This reflects a long-run trend towards a shift in employment to service-producing industries in which unemployment insurance coverage

is relatively low. Another factor was the continuing increase in wages and salaries which resulted in a growing number of persons exceeding the wage ceiling set at \$5,460 in 1959.

A total of 942,400 regular benefit periods were established in 1963 compared with 918,700 in 1962. This increase was fairly uniformly spread over all age groups with the exception of the 25-34 years group which declined slightly.

There were 360,600 seasonal benefit periods established or 14,800 less than in the preceding year. The percentage of the insured population establishing seasonal benefit periods thus fell to 8.8 from 9.2 in 1962. A drop in the number of Group B claimants more than offset the increase in the number of Group A claimants.

The average weeks authorized in 1963 was 28.7 for regular and 13.0 for seasonal, compared with 27.4 and 13.2 respectively in the preceding year. The average duration for which benefits were drawn by beneficiaries who terminated benefit periods in 1963 was 12.7 weeks for regular and 10.2 weeks for seasonal (13.0 and 10.1 weeks in 1962). Average weekly benefit payments, both regular and seasonal, at \$25.36 and \$23.61 respectively, were slightly higher in 1963. Total regular benefit payments on benefit periods terminated in 1963 declined by \$7.4 million to \$297.0 million. Similarly, total seasonal benefit payments declined by \$2.0 million to \$86.9 million.

INSURED POPULATION

Unemployment insurance was estimated to cover slightly over 80 per cent of the non-agricultural paid workers at June 1, 1963. The percentages were relatively low in the service industries and in public administration and defence mainly due to very limited coverage in education, health and welfare and government service respectively. Coverage by region was lowest in the Prairie and highest in the Atlantic region.

Ontario and Manitoba had a relatively higher proportion of the female insured than of the male. In the Atlantic provinces it was the reverse. The lower female percentages in the Atlantic provinces were probably due to a combination of economic and social factors, i.e., availability of jobs suitable for women and the social attitude towards female employment in this region. Moreover, to the extent to which a higher proportion of women employees are

in non-insurable employment in some of these regions, this may also be a factor contributing to the lower proportion of women in the insured population.

Regular Claims Established

The total number of regular benefit periods established in 1963 increased slightly from 918,700 to 942,400. This conforms to the slight increase in the insured population noted above.

The proportion of claimants found in various provinces did not correspond closely to the relative weight of these provinces in the insured population. The Atlantic provinces, Quebec and, to a lesser extent, British Columbia, accounted for a larger percentage of regular claims established than of the insured population; in Ontario and in the Prairies it was the reverse.

**Percentage Distribution of the Insured Population and of Regular Benefit Periods
Established, by Regions**

Region	Insured population	Regular benefit periods established
Atlantic	8.8	11.5
Quebec	29.2	31.7
Ontario	38.8	33.7
Prairie	13.4	12.9
British Columbia	9.8	10.2
Totals	100.0	100.0

The age groups 20-24 and 65 plus are more heavily represented among claimants than in the insured population. The higher proportion of younger persons in the claimant group is due to the fact that their job attachment is relatively tenuous; the older group possibly because they include a number of persons who are in the process of leaving the labour force.

About 47 per cent of all regular beneficiaries had a dependent. However, only about 6 per cent of women beneficiaries had a dependent. The percentage of beneficiaries having a dependent was substantially greater in the Atlantic provinces than in Canada as a whole. This reflects the higher

proportion of men establishing benefit periods in that region.

The proportion of all regular claims established in various industry groups tended to differ from the proportion of the insured population found in these industries. The primary and construction industries together accounted for 12 per cent of the insured at June 1 but were the source of 30 per cent of regular claims established, based on the last job held. The service industry and public administration and defence were about equally represented in the insured and claimant population. In all other main industry groupings there was a considerably larger proportion of insured persons than of regular claims established.

Industry	Percentage distribution	
	Insured population	Regular benefit periods established
Primary	4.6	10.1
Manufacturing	36.8	31.0
Construction	7.3	19.9
Transportation, communication and other utilities	12.0	9.0
Trade	18.9	13.6
Finance, insurance, real estate	4.8	2.0
Community, business and personal service	11.6	10.6
Public administration and defence	4.0	3.8
Totals	100.0	100.0

Regular Claims Terminated

The distribution of benefit paid between provinces differs substantially from the distribution of the insured population. Thus, Ontario and Quebec with 68 per cent of the insured population received 63.6 per cent of the regular benefit. On the other hand the Atlantic provinces with less than 9 per cent of the insured population obtained 12.6 per cent of regular benefit. The payment of benefit, therefore, has significant redistributive effects.

Average weekly payments to women were \$17.76 compared with \$28.12 for men. Two factors account for this. First, the great majority of women receive single rates and second, a higher proportion of women fall into the lower benefit classes because women tend to be in industries where earnings are below average.

Reflecting the higher earnings associated with jobs held by men, slightly over 40 per cent of men with a dependent were in the top benefit class of

\$36 compared with only 5.5 per cent of women. No province had any appreciable percentage of women in the top benefit class.

Some 27 per cent of all benefit periods were terminated by exhaustion, which in general indicates that at least this proportion was without work at the end of the benefit period. In the Atlantic region, where authorizations are shorter and employment opportunities relatively more limited, the rate of exhaustion was 42.7 per cent compared with a rate of 20.4 per cent in Ontario.

The percentage of periods terminated by exhaustion varied inversely with weeks authorized. For persons with minimum authorization of 12 weeks, exhaustions exceeded 70 per cent while less than 5 per cent of persons with the authorization of 51 or 52 weeks fell into this category.

The high correlation between short authorizations and exhaustions is related to the high proportion of young persons entering insured employment in this group. Thus about 30 per cent of claimants 14-19 years of age exhausted benefit rights compared with an overall exhaustion rate of about 27 per cent.

Males 65 years of age and over exhibited higher exhaustion rates than all other males, about 50 per cent as against 26 per cent respectively. Average weeks paid on benefit periods terminated by exhaustion were about 28 for this group compared with about 17 for all other males.

The exhaustion rate overall for men was 28.7 per cent and 22.5 per cent for women. The rate for single men was slightly higher than for married men. The rate for married women, however, was considerably higher than for single women.

Marital status	Exhaustion ratio		
	Male	Female	Both sexes
Single	30.1	16.1	27.1
Married	27.4	24.5	26.7

SEASONAL BENEFIT PERIODS ESTABLISHED AND TERMINATED

The geographic distribution and the characteristics of claimants for seasonal benefit differ significantly from both the insured population and persons establishing periods of regular benefit. This is in part related to some concentration of seasonal benefit claimants in industries which are of particular importance in certain provinces. The differences are also associated with lower contribution requirements for seasonal benefit compared with regular benefit.

The Atlantic provinces, with less than 10 per cent of the insured population, accounted for almost 24 per cent of all seasonal benefit claims. Ontario, by contrast, with almost 40 per cent of the insured population had only about 24 per cent of all seasonal benefit periods.

Region	Percentage distribution by region		
	Insured population	Regular claims established	Seasonal benefit periods
Atlantic	8.8	11.5	23.8
Quebec	29.2	31.7	30.0
Ontario	38.8	33.7	23.5
Prairie	13.4	12.9	12.9
British Columbia	9.8	10.2	9.8
Canada	100.0	100.0	100.0

Percentage Distribution of Regular and Seasonal Claims Exhausted, by Region

Region	Regular benefit claims exhausted	Seasonal benefit periods exhausted
Atlantic	18.4	30.0
Quebec	33.8	30.0
Ontario	25.5	19.7
Prairie	13.5	11.4
British Columbia	8.8	8.9
Canada	100.0	100.0

Women comprised 28.5 per cent of the insured and 24.6 per cent of regular claimants but only 20.1 per cent of seasonal benefit claimants. The lower percentage of females among claimants for seasonal benefit is due in part to the fact that women have little representation in primary industries which are more important as a source of seasonal than regular benefit claims.

About 52 per cent of seasonal benefit claimants exhausted their benefit rights compared with about 27 per cent of regular claimants. This is related to reduced opportunities for employment available during the period in which seasonal benefit is payable and to shorter duration of seasonal benefit periods.

Seasonal A claimants constituted 67.5 per cent of all claims for seasonal benefit in 1963. This category of benefit claimants, which includes claimants for fishing benefit, is particularly important in the Atlantic region where Seasonal A claimants comprised 77 per cent of all seasonal claimants. It was less important in the Prairies, Quebec, British Columbia and Ontario, in that order.

Distribution of Seasonal Benefit Claimants, by Region and Type

Region	Seasonal A	Seasonal B
Atlantic	77.3	22.7
Quebec	65.6	34.4
Ontario	61.6	38.4
Prairie	67.0	33.0
British Columbia	64.7	35.3
Canada	67.5	32.5

The exhaustion rate for seasonal benefit claimants was about 52 per cent. It was slightly lower for Seasonal A claimants and slightly higher for Seasonal B claimants.

The proportion of Seasonal A claimants was higher than for Seasonal B claimants in relatively unskilled occupations such as loggers, fishermen and labourers. It was relatively lower for managerial, professional, technical and clerical occupations, especially for women in these occupations.

UNEMPLOYMENT INSURANCE COVERAGE

A person is insurable if employed under an expressed or implied contract of service or apprenticeship. The main exceptions are someone working in agriculture; hunting and trapping; private domestic service; teaching; medical, nursing, technical and domestic staff in hospitals and charitable institutions not carried on for gain, unless he is insured under arrangement with the institution; private duty nursing; the armed forces; police forces, unless he is insured under arrangements with municipalities and provinces; permanent employees with the federal government apart from Crown Agencies, provincial governments and municipal governments, except in connection with a public utility; employment in provincial public service, unless he is insured under an arrangement with the province; truckers; considerable employment, supported by a declaration, such as part-time for less than 24 hours a week, temporary work in December, and employment for no more than 30 consecutive days with carnivals, exhibitions, race meetings, etc; persons paid by commission; a worker paid on other than hourly, daily or piece rates and earning more than \$5,460 a year, unless he elects to continue insurance.

Coverage has been gradually extended to occupations originally excluded. In some, this has come about as administrative problems were solved. Extension of coverage brought in transportation by air and by water; stevedoring; lumbering and logging; nursing other than private duty nursing; public utilities; hospitals and charitable institutions (on an optional basis); some parts of agriculture, such

as raising of poultry and egg grading, and breeding or raising race horses, saddle horses or light harness horses, and landscape gardening.

Coverage was extended to any person engaged in commercial fishing on April 1, 1957, notwithstanding that he might not be an employee. The "employer" responsible for making contributions on the fisherman's behalf and for keeping records is the actual employer, if he is not a member of the crew; the buyer, if the actual employer is a member of the crew and he or one of the crew sells the catch to the buyer on a face-to-face basis in Canada; and otherwise, the actual employer or head fisherman or agent acting for the fisherman. During the seasonal benefit period, claimants classified as fishermen are considered available and unemployed in respect to any activity in commercial fishing or in repairing fishing gear or boat. However, income from fishing is considered in determining benefit payable.

Data on persons covered are obtained from returns in connection with the renewal of insurance books and contribution cards at June 1st together with new entrants in May and June. Included in the figure are those who were employed in insurable employment and whose books or cards were therefore renewed through employers, as well as those on claim whose books were renewed at their first visit to a local office after May 1st. As indicated in the headnote to the tables, figures are based upon a 10 p.c. sample of returns (consisting

of those with insurance numbers ending in 4) and, therefore, smaller numbers are subject to relatively large sampling variation.

Data on the insured provide a base to which figures on benefit periods established and terminated can be related. Counterparts of these tables are noted below. However, incidence of benefit periods or benefit weeks paid determined from these tables should be used cautiously. Occupations and industries recorded in Tables 1 to 3 are those in which the insured was engaged or attached at mid-year 1963. Those indicated in related tables refer to the last job held by each claimant at the time of his claim. Thus, each must be taken as approximating his "usual" employment and it can not be assumed that a claimant's past contributions (on which his benefit rate and duration depend) were paid while

engaged in the last job recorded. Nevertheless, comparisons show significant concentrations connected with known shifts in employment.

Insured tables	Related tables
1	10, 15, 25, 28, 34, 43
2	11, 24, 42
3	13, 23, 41
4	6, 19, 37
5	8, 20, 38

All of the figures in this report are classified by sex. The logic behind this decision is apparent from the following table. While women made up 28.5 p.c. or considerably less than one-third of the insured, they accounted for a larger share of single persons, Ontario and Manitoba insured, white collar workers, those under 25 years of age, and of trade, finance and service workers.

BENEFIT PERIODS ESTABLISHED AND TERMINATED

Summary of Conditions Relating to Receipt of Benefit

Regular Benefit

Benefit Period.—This is a period of 52 weeks starting with, and including, the week in which it is established.

Qualifying Conditions.—A claimant must have 30 weekly contributions in the two years immediately preceding the Sunday prior to the claim date, 8 of which must be in the last 52 weeks. When a

previous benefit period was established within the two year period the 8 contribution weeks referred to must be in the last 52 weeks or since the start of the last regular benefit period, **whichever is shorter**. A further regulation for subsequent benefit periods is that at least 24 of the 30 contribution weeks referred to must be in the last 52 weeks or since the start of the last benefit period, either regular or seasonal, **whichever is longer**.

Weekly Rate.—The rate is set at the commencement of the benefit period, and reflects dependency status at that time. It is based on the average of the

most recent 30 contribution weeks paid in respect to the claimant during the 104 weeks immediately preceding the starting date of his benefit period, in accordance with the table in Appendix A. A higher rate is paid the claimant if he or she has a dependent spouse, or maintains children under 16 years of age, or maintains a self-contained dwelling and supports someone related by blood, marriage or adoption.

Duration. — This is one week's benefit for every two contribution weeks in the two years prior to the start of the benefit period, with a maximum of 52 weeks full benefit. Where there was a regular or seasonal benefit period within the last two years, only contribution weeks in the year prior to the claim or in the period since the start of the last benefit period, whichever is longer, count as contribution weeks for this purpose. Thus the minimum duration is 12 weeks.

Seasonal Benefit

Benefit Period. — This may be established only in the span from the start of the week in which December 1st falls to the end of the week in which May 15th next falls. The claimant may establish only one seasonal benefit period in this interval.

Qualifying Conditions. — A claimant who fails to qualify for regular benefit may qualify for: Group A, if he has 15 contribution weeks or more since the

Saturday prior to the previous March 31st; or Group B, if he is unable to qualify for Group A, and his most recent regular benefit period terminated following the Saturday of the week in which the previous May 15th occurred. Claims filed later than the week in which March 31st falls cannot be considered for the current seasonal benefit under Group A. Those claims filed in the week in which May 15th falls can only be considered for Group B if the waiting period is waived.

Weekly Rate. — For Group A benefit, this is the average of the employee's portion of all weekly contributions following the Saturday prior to March 31st, in accordance with the tables in Appendix A; for Group B benefit, this is the same rate, subject to redetermination of dependency position, as applied to the claimant's last regular benefit period.

Duration. — For Group A, this is five weeks benefit for every six contribution weeks from the Saturday prior to March 31st, or the number of possible benefit weeks from the claim to May 15th, **whichever is less.** For Group B, this is the number of weeks in the last regular benefit period, or the number of possible benefit weeks from the claim to May 15th, **whichever is less.** The minimum duration is 13 weeks for Group A and 12 weeks for Group B, unless the number of possible benefit weeks from the claim date is less.
