REVIEW OF 1965

Gross National Product¹ advanced by 9.7 per cent over 1964, reaching a level of \$52.0 billion. The gain exceeded last year's and was the highest rate of increase in almost a decade. The growth was broadly based with personal consumption once again accounting for the major part. The level of demand generated heavy pressures on the nation's productive capacity with the result that price levels rose by 3 per cent and reduced the gain, in real terms, to slightly more than 6 1/2 per cent.

The labour force² was 209,000 higher than one year ago and stood at approximately 7.1 million in May 1965. Over the same period, the increase in the numbers employed was 237,000; this exceeded that of the labour force as the number of unemployed declined by 28,000. The number of persons unemployed was estimated at 265,000. This was 3.7 per cent of the labour force compared with 4.2 per cent last year. Total non-agricultural employment was 256,000 higher than last year, reflecting an intersector shift from employment in agriculture, which was down by 19,000. Compared with a year ago, paid-worker non-agricultural employment in May 1965 increased by 279,000 or 5.2 per cent, reaching a level of approximately 5.6 million.

There were 4,257,000 persons covered by the Unemployment Insurance Act as at June 1, 1965. The concept of the insured population in 1965 does not permit accurate comparison of the data with those of earlier years: not included in the insured population this year, but included in previous years, are new entrants into insured employment during the months of May and June³.

As the pressure of demand sustained high levels of employment throughout the year, the number of regular benefit periods established declined to the lowest total, 792,000, in more than a decade. Compared with last year, there were approximately 53,000 fewer benefit periods with males accounting for virtually all of the decline.

The downward trend in seasonal benefit periods for the past few years carried into 1965 when there were 290,000 cases, 27,000 less than a year ago. This suggests that over the winter months during which seasonal benefit is payable, employment conditions are becoming increasingly stable, partly as a result of general economic improvement and partly as a result of government programs aimed at encouraging winter employment.

¹ "National Accounts, Income and Expenditure", DBS Catalogue No. 13-201.

² "The Labour Force", DBS Catalogue No. 71-001.

³ It is no longer possible to obtain data on the number and characteristics of new entrants because of the replacement of Unemployment Insurance numbers (issued only to persons in insurable employment) by Social Insurance Numbers (issued to all persons in the labour force).

As would be expected with fewer benefit periods, the total amount of payments declined from 1964, both for regular and seasonal benefit, the former from \$250.5 millions to \$225.3 millions, and the latter from \$75.1 to \$68.2 millions. The average number of weeks authorized per regular benefit period in 1965 was 29.2 and the average number paid was 12.7. Comparable figures for 1964 were 29.1 and 12.1 weeks respectively. Seasonal claimants, on the average, were authorized 13.1 and paid 9.7 weeks, virtually unchanged from a year ago. Average weekly payment was \$25.56 for regular claimants and \$24.22 for seasonal claimants. Last year, these payments were \$25.45 and \$23.91 respectively.

Insured Population

The 1965 insured population of 4.3 million is roughly 77 per cent of all paid workers in non-agricultural employment. Slightly more than two thirds of all insured persons are concentrated in the central provinces of Quebec and Ontario, while about 10 per cent are in British Columbia, 13 per cent in the Prairie provinces and 9 per cent in the Atlantic region. Approximately two thirds of the insured are married and most of the remainder are single; 70 per cent are men and 30 per cent are women. Because these are essentially the same as last year, one may conclude that while the absence of "new entrants" will affect the level of the insured population, the proportional distribution among the different categories should not be altered appreciably.

Approximately three quarters of the insured population are engaged in four industry divisions, viz., manufacturing 36 per cent, trade 18 per cent, services 12 per cent and, transportation 10 per cent. Of the remaining 25 per cent of the insured population, the largest group was in construction, 8 per cent, followed by 5 per cent in the finance, insurance and real estate industry.

More than one third of the insured population are production workers, 18 per cent are clerical, 14 per cent labourers and 9 per cent are service personnel. Transport workers and sales personnel each comprise about 7 per cent. Less than 3 per cent of the insured population are represented in any of the other occupational groups.

Regular Benefit Periods Established

The number of claims established for regular benefit in 1965 fell to the lowest total in more than a decade, and compared with a year ago, declined by more than 6 per cent with virtually all of the decline attributable to fewer claims by men.

Of the 792,000 benefit periods established in 1965, Quebec and Ontario each accounted for about a third, with the remainder being distributed almost

equally among the Atlantic, Prairie and Pacific regions. The decline from last year of over 50,000 benefit periods was spread unevenly through the provinces with the rate of decline in the Atlantic provinces, Quebec and British Columbia well below the national rate. As a result, these regions increased fractionally their respective shares of the total number of benefit periods, in comparison with a year earlier.

As heavy pressures were exerted on the nation's productive capacity, the strong demand for labour was reflected mainly among workers in the 25-44 age bracket who accounted for more than 80 per cent of the decline, between 1964 and 1965, in the number of benefit periods established.

Of those claimants who gave their marital status, almost two thirds were married, 30 per cent were single, and the remainder were either divorced, widowed or separated. This distribution was virtually unchanged from last year, and, as this suggests, each group contributed proportionally to the decline in benefit periods.

With the exception of the Public Administration and Defence industry, the overall decline in benefit periods was reflected in every industry division. Examination of the former industry revealed that the increase was attributable to unskilled male workers, primarily labourers, showing municipal government as their last employer.

It might be noted here that direct comparisons of the industrial and occupational attachment of the insured population and persons establishing benefit periods should be regarded with caution. Statistics of the insured population record attachment at June 1, whereas the attachment of claimants relates to the job held immediately prior to establishment of the benefit period, regardless of the length of time the job was held.

Approximately 80 per cent of the reduction in benefit periods between 1964 and 1965 was accounted for by claimants from the manufacturing, construction, trade and service industries. An interesting development, which forms part of a trend emerging over the past few years, is the rate of decline in regular benefit periods established by persons showing last attachment to the construction industry; a rate slightly greater than that for the manufacturing industry. Since the construction industry has characteristically been severely affected by seasonal factors, the growing capacity of this industry to provide more stable year-round employment may be some indication of the effectiveness of measures designed to stimulate off-season construction.

On an occupational basis, there were 29,000 fewer cases established by production workers and approximately 7,000 less by labourers. These two groups accounted for more than two thirds of the reduction in regular benefit periods. Transport workers established some 4,000 fewer cases than last year while the number established by clerical workers declined by 3,000.

About 45 per cent of all claimants establishing a regular benefit period in 1965 had a dependent. Of these more than half drew benefits at the maximum rate, \$36.00; about one in five claimants without a dependent was eligible for the maximum of \$27.00. Comparable data for 1964 show that 46 per cent of all claimants had a dependent and about 48 per cent drew the maximum benefit, while 19 per cent of those without dependents received the maximum payment. Since the rate of benefit payment is linked to the rate of contribution and earnings, the growing number of claimants receiving the maximum rate reflects the trend to higher earnings.

Regular Benefit Periods Terminated

A benefit period is terminated either by exhaustion or by lapsing. A regular benefit period has a potential duration of 52 weeks from the date established. If a claimant draws all the benefit to which he is entitled within those 52 weeks, his benefit period terminates by exhaustion. If, at the end of 52 weeks, all the benefit is not drawn, the benefit period terminates by lapsing.

The average number of weeks paid per regular benefit period was 12.7, and the average amount of benefit was \$324. In both cases, these were slightly higher than comparable 1964 data which showed 12.1 weeks and \$308, respectively.

In Ontario, Alberta and British Columbia, the average number of compensated weeks was lower than the national average. The longest average duration per benefit period was 15.1 weeks in the province of Newfoundland; British Columbia with 11.7 was the shortest. Last year Ontario exhibited the shortest duration per benefit period; Prince Edward Island, the longest.

The highest amount of benefit per period was paid in Newfoundland, and the lowest in Ontario. This has been true for many years. This circumstance can be related to employment opportunities in the two provinces. Ontario with a broadly based economic structure offers more scope for finding a job than does the narrower industrial complex in Newfoundland. Thus, the average number of weeks paid and the average amount of benefit per period are higher in Newfoundland than in Ontario. In addition, a very high proportion of claimants in Newfoundland are men who usually claim at the higher dependency rate.

The average weeks paid on benefit periods terminated by exhaustion was about twice that on lapsed periods. There is a direct relationship between age and the average number of weeks paid for periods terminated both for lapsing and exhaustion, although this is much more evident for periods terminated by lapsing. The average number of weeks paid to claimants 65 years of age and older is noticeably higher than any other age group for periods terminated both by lapsing and exhaustion. This might be indicative of the greater difficulty experienced by older workers in obtaining

employment, particularly those who had attained the age of retirement and were in the higher earnings brackets.

At the national level, there was no noteworthy change as slightly more than one quarter of all benefit periods terminated by exhaustion, compared to just under 25 per cent one year ago. Exhaustion rates in the Atlantic provinces, and the provinces of Manitoba and Saskatchewan, were well above the national rate; a fact which may be related either to shorter authorization periods, on average, in these provinces, or else to the relative lack of employment opportunities in these areas as compared with the other provinces.

Seasonal Benefit

A seasonal benefit period may be established between the interval of December 1 and the Saturday of the week in which May 15 falls. At the end of this period, a seasonal benefit period is terminated automatically by lapsing. A seasonal benefit period is terminated by exhaustion in the same way as a regular benefit period.

There were about 290,000 seasonal benefit periods established in 1965, a decline of 27,000 or 8.6 per cent from a year earlier. Slightly more than one quarter of the claimants were concentrated in the Atlantic provinces where seasonal benefit payments are more important than elsewhere: for instance, more than half of all benefit periods established in the Atlantic region between December and May are seasonal compared with about one third in the other regions. Quebec has the largest share of seasonal claimants, 29 per cent. Ontario accounted for 23 per cent, and the Prairie provinces and British Columbia 12 and 10 per cent, respectively.

Teenagers and claimants 65 years of age and over, each established about 7 per cent of the seasonal benefit periods. Claimants between the ages of 25 and 44 accounted for almost 40 per cent of all seasonal claims established, while the 45-64 age group accounted for 29 per cent.

Fifty-eight per cent of the seasonal claimants were married, 34 per cent were single and the remainder were either divorced, separated or widowed.

A substantial part of the reduction in seasonal benefit periods between 1964 and 1965 was accounted for by the Construction and Fishing industries which each showed a decline of more than 5,000 cases. Forestry, Manufacturing and Transportation each registered declines in excess of 4,000. All other

industries showed fewer cases as well, except Public Administration where there was an increase of over 5,000 benefit periods.

As was the case with claimants for regular benefit, the only occupational group showing an increased number of claims between 1964 and 1965 was the professional and technical class. This group, however, comprises less than three per cent of the insured population. All other occupational categories registered reductions, the most notable being "production" workers, fishermen, loggers and labourers.

Approximately 44 per cent of all claimants had a dependent compared with 46 per cent last year. However, 28 per cent of these seasonal claimants drew the maximum dependency rate this year, in contrast with 25 per cent one year ago. The fact that about half of all regular claimants with a dependent drew benefit at the highest rate, compared with about one quarter for seasonal claimants, is illustrative of the known correlation between the level of earnings and stability of employment.

There are two kinds of seasonal benefit periods. Class A and Class B.

In order to qualify for Class A benefit, a claimant must prove at least 15 contribution weeks since the prior March 31. It follows, then, that entitlement under Class A can only be set up between the weeks of December 1 and March 31. To be eligible for Class B, a regular benefit period must have terminated since the previous mid-May.

Class A claimants represented two thirds of all seasonal benefit periods terminated, but accounted for close to 80 per cent of the decline, between 1964 and 1965, in the number of seasonal benefit periods. Thus, compared with last year, the number of seasonal benefit periods terminated by Class A claimants fell by 10 per cent as opposed to less than 6 per cent for Class B claimants. As a general rule, persons eligible for Class B benefit have a relatively tenuous attachment to the labour force.

Approximately 31 per cent of Class A claimants and 17 per cent of Class B were concentrated in the Atlantic provinces which account for less than 10 per cent of the insured population. In contrast, Ontario, with close to 40 per cent of the insured population, had only 20 per cent of the Class A claimants and 29 per cent of Class B. The higher proportion of Class A claimants in Newfoundland is related to the concentration of fishermen in this region. Fishermen are normally entitled to Class A benefit.

APPENDIX C

Technical Note

The Unemployment Insurance Act is compulsory for workers engaged in employment not specifically denoted as "excepted employment". One of the elements indigenous to the concept of insurable employment under the Act is a contract¹ of service or apprenticeship, either expressed or implied, written or oral. Contributions are required for both employer and employee (in equal amounts), augmented by a 20 per cent grant from the Consolidated Revenue Fund. All administrative costs are paid out of moneys appropriated by Parliament.

Persons² employed in agriculture, hunting, trapping, private domestic service and teaching are excluded, as are employees of a provincial public service³ or municipality³. Members of the Canadian Armed Forces and of police forces³ are also excluded. Medical, nursing, technical and domestic staff in hospitals³ or charitable institutions³ not carried

¹ It follows that the class of worker coming within the purview of the Act is the "paid-worker", the single exception being the extension of coverage to the Fishing industry, April 1957. Because the majority of workers in this industry are self-employed, special regulations were required to adapt the plan to the particular conditions in that industry.

² This list is not intended to be exhaustive; those interested in more exact details should consult the Act and Regulations.

³ Unless insured under special arrangements with the government (or employer) concerned.

on for profit do not contribute, neither do private duty nurses. An earnings ceiling restricts contributions to employees earning \$5,460.00 or less except where the term of employment is hourly, daily, or piece rate in which case contributions are required, regardless of the amount of earnings.

When a person separates from employment, his claim is first examined in the light of the contribution requirements as defined under "Qualifying conditions" for Regular Benefit. Where these are met, the average weekly rate, the weeks of entitlement, together with the total entitlement, in dollars, are calculated. Because the Act allows for compensation of partial weeks of recorded unemployment, the dollar value of total benefit entitlement is essential. Once these values are established, the claim is then adjudicated to ensure that the claimant has fulfilled all the other conditions of qualification for benefit.

During the 5½ months commencing with the first week of December, seasonal benefit is payable to certain classes of claimants unable to prove the regular contribution requirements. Classes of claimants eligible for seasonal benefit are listed under the paragraph "qualifying conditions" - seasonal benefit. Claimants must fulfill the conditions as for regular benefit except those with respect to contributions.

Glossary of Terms

Insured Population. — The number of persons estimated as in contact with the Unemployment Insurance Commission either as contributors or as claimants at approximately June 1. Estimates are based on a 10% sample.

Regular Benefit. — A claim for regular benefit may be filed at any time. To be eligible for this benefit, a claimant is required to prove minimum attachment to insured employment as indicated below under "Qualifying Conditions".

Seasonal Benefit. — Applicable only during the interval commencing with the week in which December 1 falls and terminating on the Saturday of the week in which May 15 occurs. During this period of the year, when insufficient contributions are recorded on a claim for regular benefit, it is automatically considered under the seasonal benefit provisions.

Benefit Period. — This is simply a term used to denote the existence of benefit rights. There are regular benefit periods and seasonal benefit periods.

Establish. — Within the context of this report the term "establish" refers only to persons who have fulfilled the minimum contribution requirements entitling them to either regular or seasonal benefit.

Terminate. — A benefit period terminates when the right to benefit no longer exists. Benefit periods terminate either by lapsing or by exhaustion.

Lapse. — Regular benefit rights lapse one year from the date established, unless exhausted earlier. All rights to seasonal benefit lapse with the closing date of the interval during which these benefits are payable.

Exhaust. — When a claimant receives all the benefits to which he is entitled, the benefit period terminates automatically by exhaustion.

Qualifying Conditions

Regular Benefit

- (1) Where there has been no previous benefit period established within the prior 104 weeks, a claimant is required to prove 30 weeks of insurable employment within that interval and at least 8 of these weeks must fall within the year prior to the current claim.
- (2) Where benefit entitlement has been established within the prior 104 weeks, the 30 week requirement remains, but additional tests are applied as in (a) and (b).
 - (a) The cycle to which the 8 week test applies may be less than one year. If, for example, a regular benefit period was established at any date within the year prior, then the 8 weeks must have occurred since that date.
 - (b) Where entitlement to either regular or seasonal benefit has been established within the prior 104 week interval, then 24 of the 30 contribution weeks must have been recorded either since the date the previous claim was established or within the most recent 52 weeks whichever is the longer interval.

Seasonal Benefit

In order to qualify for Class A, a claimant must prove at least 15 contribution weeks since the prior March 31. It follows, then, that entitlement under Class A can only be set up between the weeks of December 1 and March 31. To be eligible for Class B, a regular benefit period must have terminated since the previous mid-May.

Claimants are tested, first, under Class A, only those failing the 15 week requirement being eligible for Class B. Seasonal benefit periods established subsequent to the end of March are exclusively Class B.

During the 5½ months in which the seasonal benefit provisions are operative, a claimant is eligible only once.

Weekly Rate.—This is an amount computed at the time the benefit period is established. For regular benefit, the rate is based on the average contributions (which in turn are determined by insured earnings) during the most recent thirty contribution weeks referred to under "Qualifying Conditions". As indicated in Appendix A, Columns 3 and 4, the rate will be higher for those with a dependent. The amount paid weekly, to a claimant, however, may be less than the maximum for his average earnings. Partial weeks of benefit may be associated with partial employment or spells of non-availability. Columns 5 and 6 of the Schedule in Appendix A illustrate the operation of the allowable earnings provision for each weekly rate. An example will serve to illustrate this: if a claimant eligible for

\$36.00 a week benefit earns \$18.00 or less in a week there will be no reduction in the benefit on that account. However, should the earnings be \$20.00, only \$34.00 benefit would be paid.

The Act contains a provision which ensures that a rate is not unduly reduced, relative to a prior claim, because of intermittent or partial earnings. For example, when a claim is being computed it may be found that, on the basis of the earnings during the qualifying period, the weekly rate should be \$26.00. If, however, this person had a claim within the previous 104 weeks on which the weekly rate was \$36.00, then by virtue of Sec. 47 (2a) of the Act, the weekly rate on the new claim would become \$33.00.

For seasonal benefit Class A, the benefit rate is based on the average contributions since the preceding March 31.

For seasonal benefit Class B, the benefit rate is that of the regular benefit terminated since the previous mid-May, subject to redetermination on the basis of a change in dependency status.

Dependency Status.—Benefit is payable either at the single or dependency status, where a claimant is either (a) a man whose wife is wholly or mainly maintained by him (b) a married woman who has a husband dependent on her (c) or a person who maintains one or more children under 16 years of age or who supports a person related by blood, marriage or adoption, in a self-contained domestic establishment.

For purposes of classification in this report, the dependency status is that effective at the time the benefit period was established. However, claimants may revert from single to dependency or vice versa during the currency of the benefit period.

Duration Authorized.—For regular benefit the formula provides one week of benefit for every two weeks of contributions within the prior 104 weeks. The maximum is thus 52 weeks. However, in circumstances such as outlined above in paragraph 2(b) "qualifying conditions" regular benefit, only the contributions acquired in the interval over which the 24 week requirement applies are considered for application of the formula. Hence the minimum, while 15 weeks for those with the bare requirements, may be as low as 12 weeks where the 24 week provision applies.

For seasonal benefit Class A, the formula allows 5 weeks of benefit for every 6 contribution weeks in the qualifying interval. The minimum is 13, or the number of weeks remaining to mid-May, whichever is the shorter.

The duration on Class B claims is the number of weeks of regular benefit authorized on the period terminating since the previous mid-May, subject to the cut-off date for paying seasonal benefit.

Weeks Paid.—This is the estimated number of complete weeks, based on "weekly rate" and "amount of benefit paid" to each claimant whose benefit period terminated in the interval covered by this report. The number of weeks paid as recorded in this report should not be interpreted as the weeks paid in that particular calendar year since they include all weeks paid on these claims, even though some were for the previous year. However, the discrepancy in totals is usually not large. For example, in 1965, the Monthly Statistical Report on the Operation of the Act records 13 million compensated weeks of regular and seasonal benefit. In the context of this report, this figure was 14 million. The annual total of monthly data include partial weeks,

whereas as indicated in the opening sentence of this paragraph, weeks paid are "estimated complete weeks".

Amount of Benefit.—As recorded on the benefit periods terminated during 1965.

Average Weekly Rate Compensated.—This is a function of the "amount paid" and the number of "estimated complete weeks" as discussed above. It thus represents average compensation for a full week of benefit. This is a different concept from that in the Monthly Statistical Report on the Operation of the Act which does not make any correction for partial weeks.
